

*The Table of Contents is a total listing of Parts A and B.*  
*Part A consists of pages L010201–012820, and Part B pages 013101–019902(E).*

## PART A

### LETTERS

#### Fundamental concepts

- Detection loophole in quantum causality and its countermeasures (6 pages) ..... L010201  
Zhu Cao

#### Quantum information science

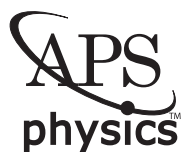

- Parameter concentrations in quantum approximate optimization (6 pages) ..... L010401  
V. Akshay, D. Rabinovich, E. Campos, and J. Biamonte
- Maximum violation of monogamy of entanglement for indistinguishable particles by measures  
that are monogamous for distinguishable particles (7 pages) ..... L010402  
Goutam Paul, Soumya Das, and Anindya Banerji

#### Atomic and molecular structure and dynamics; high-precision experiments

- Asymmetry in emission of photons with left- and right-hand circular polarizations in two-photon decay (5 pages) ..... L010801  
Konstantin N. Lyashchenko, Victoria A. Knyazeva, Oleg Yu. Andreev, and Deyang Yu
- Precision characterization of the  $^2D_{5/2}$  state and the quadratic Zeeman coefficient in  $^{171}\text{Yb}^+$  (6 pages) ..... L010802  
T. R. Tan, C. L. Edmunds, A. R. Milne, M. J. Biercuk, and C. Hempel

#### Ultracold systems and matter waves

-  Studying the low-entropy Mott transition of bosons in a three-dimensional optical lattice by measuring  
the full momentum-space density (5 pages) ..... L011301  
Ga etan Herc e, C ecile Carcy, Antoine Tenart, Jan-Philipp Bureik, Alexandre Dareau,  
David Cl ement, and Tommaso Roscilde
- Bragg scattering of an ultracold dipolar gas across the phase transition from Bose-Einstein condensate  
to supersolid in the free-particle regime (6 pages) ..... L011302  
D. Petter, A. Patscheider, G. Natale, M. J. Mark, M. A. Baranov, R. van Bijnen, S. M. Roccuzzo,  
A. Recati, B. Blakie, D. Baillie, L. Chomaz, and F. Ferlaino

ARTICLES

**Fundamental concepts**

|                                                                                                                                                                                       |        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Bell-inequality violation and relativity of pre- and postselection ( <i>6 pages</i> ) . . . . .                                                                                       | 012201 |
| G. Bacciagaluppi and R. Hermens                                                                                                                                                       |        |
| Extracting the internal nonlocality from the dilated Hermiticity ( <i>6 pages</i> ) . . . . .                                                                                         | 012202 |
| Minyi Huang, Ray-Kuang Lee, and Junde Wu                                                                                                                                              |        |
| Many-body anticommutator and its applications in the normalization of completely symmetric states<br>with Majorana's stellar representations ( <i>7 pages</i> ) . . . . .             | 012203 |
| Xi Lu, Li-Yao Zhan, Jie Chen, Hao-Di Liu, Li-Bin Fu, and Xiao-Guang Wang                                                                                                              |        |
| Order from chaos in quantum walks on cyclic graphs ( <i>7 pages</i> ) . . . . .                                                                                                       | 012204 |
| Abhisek Panda and Colin Benjamin                                                                                                                                                      |        |
| Generating high-order quantum exceptional points in synthetic dimensions ( <i>13 pages</i> ) . . . . .                                                                                | 012205 |
| Ievgen I. Arkhipov, Fabrizio Minganti, Adam Miranowicz, and Franco Nori                                                                                                               |        |
| Finding optimal Bell inequalities using the cone-projection technique ( <i>13 pages</i> ) . . . . .                                                                                   | 012206 |
| Fabian Bernards and Otfried Gühne                                                                                                                                                     |        |
| Sharp estimates for the integrated density of states in Anderson tight-binding models ( <i>11 pages</i> ) . . . . .                                                                   | 012207 |
| Perceval Desforges, Svitlana Mayboroda, Shiwen Zhang, Guy David, Douglas N. Arnold,<br>Wei Wang, and Marcel Filoche                                                                   |        |
| Vacuum radiation pressure fluctuations on atoms ( <i>8 pages</i> ) . . . . .                                                                                                          | 012208 |
| L. H. Ford                                                                                                                                                                            |        |
| Quantized transport induced by topology transfer between coupled one-dimensional lattice systems ( <i>12 pages</i> ) . . . . .                                                        | 012209 |
| Lukas Wawer, Rui Li, and Michael Fleischhauer                                                                                                                                         |        |
| Ruling out bipartite nonsignaling nonlocal models for tripartite correlations ( <i>16 pages</i> ) . . . . .                                                                           | 012210 |
| Peter Bierhorst                                                                                                                                                                       |        |
| Improving the estimation of environment parameters via initial probe-environment correlations ( <i>11 pages</i> ) . . . . .                                                           | 012211 |
| Hamza Ather and Adam Zaman Chaudhry                                                                                                                                                   |        |
| Apparent quantum paradoxes as simple interference: Quantum violation of the pigeonhole principle<br>and exchange of properties between quantum particles ( <i>6 pages</i> ) . . . . . | 012212 |
| Raul Corrêa and Pablo L. Saldanha                                                                                                                                                     |        |
| Non-Markovian effects in the spin-boson model at zero temperature ( <i>9 pages</i> ) . . . . .                                                                                        | 012213 |
| S. Wenderoth, H.-P. Breuer, and M. Thoss                                                                                                                                              |        |
| Impossibility of achieving Landauer's bound for almost every quantum state ( <i>13 pages</i> ) . . . . .                                                                              | 012214 |
| Paul M. Riechers and Mile Gu                                                                                                                                                          |        |
| Coherent dynamical control of quantum processes ( <i>17 pages</i> ) . . . . .                                                                                                         | 012215 |
| V. Rezvani and A. T. Rezakhani                                                                                                                                                        |        |
| Topological protection of coherence in disordered open quantum systems ( <i>14 pages</i> ) . . . . .                                                                                  | 012216 |
| Yu Yao, Henning Schlömer, Zhengzhi Ma, Lorenzo Campos Venuti, and Stephan Haas                                                                                                        |        |

PHYSICAL REVIEW A

THIRD SERIES, VOLUME 104, NUMBER 1

JULY 2021

|                                                                                                                                                  |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Multilevel quantum thermodynamic swap engines ( <i>11 pages</i> ) . . . . .                                                                      | 012217 |
| Massimiliano F. Sacchi                                                                                                                           |        |
| Coupling-induced nonunitary and unitary scattering in anti- $\mathcal{PT}$ -symmetric non-Hermitian systems ( <i>8 pages</i> ) . . . .           | 012218 |
| H. S. Xu and L. Jin                                                                                                                              |        |
| Uncertainty limits of the information exchange between a quantum system and an external meter ( <i>8 pages</i> ) . . . . .                       | 012219 |
| Tomonori Matsushita and Holger F. Hofmann                                                                                                        |        |
| Nonclassical oscillations in pre- and post-selected quantum walks ( <i>7 pages</i> ) . . . . .                                                   | 012220 |
| Xiao-Xiao Chen, Zhe Meng, Jian Li, Jia-Zhi Yang, An-Ning Zhang, Tomasz Kopyciuk, and Paweł Kurzyński                                             |        |
| 🔗 Onset of electron-seeded cascades in generic electromagnetic fields ( <i>14 pages</i> ) . . . . .                                              | 012221 |
| A. A. Mironov, E. G. Gelfer, and A. M. Fedotov                                                                                                   |        |
| <b>Quantum information science</b>                                                                                                               |        |
| U(1)-symmetric recurrent neural networks for quantum state reconstruction ( <i>9 pages</i> ) . . . . .                                           | 012401 |
| Stewart Morawetz, Isaac J. S. De Vlugt, Juan Carrasquilla, and Roger G. Melko                                                                    |        |
| Decoherence scaling transition in the dynamics of quantum information scrambling ( <i>10 pages</i> ) . . . . .                                   | 012402 |
| Federico D. Domínguez, María Cristina Rodríguez, Robin Kaiser, Dieter Suter, and Gonzalo A. Álvarez                                              |        |
| Beating classical heuristics for the binary paint shop problem with the quantum approximate optimization algorithm ( <i>12 pages</i> ) . . . . . | 012403 |
| Michael Streif, Sheir Yarkoni, Andrea Skolik, Florian Neukart, and Martin Leib                                                                   |        |
| Quantifying dynamical coherence with coherence measures ( <i>7 pages</i> ) . . . . .                                                             | 012404 |
| Sunho Kim, Chunhe Xiong, Asutosh Kumar, Guijun Zhang, and Junde Wu                                                                               |        |
| One qubit as a universal approximant ( <i>15 pages</i> ) . . . . .                                                                               | 012405 |
| Adrián Pérez-Salinas, David López-Núñez, Artur García-Sáez, P. Forn-Díaz, and José I. Latorre                                                    |        |
| Finite-key analysis of loss-tolerant quantum key distribution based on random sampling theory ( <i>17 pages</i> ) . . . . .                      | 012406 |
| Guillermo Currás-Lorenzo, Álvaro Navarrete, Margarida Pereira, and Kiyoshi Tamaki                                                                |        |
| Symmetric multiqubit states: Stars, entanglement, and roto-sensors ( <i>25 pages</i> ) . . . . .                                                 | 012407 |
| Chrysomalis Chrysomalakos, Louis Hanotel, Edgar Guzmán-González, Daniel Braun, Eduardo Serrano-Ensástiga, and Karol Życzkowski                   |        |
| One-shot quantum error correction of classical and quantum information ( <i>14 pages</i> ) . . . . .                                             | 012408 |
| Yoshifumi Nakata, Eyuri Wakakuwa, and Hayata Yamasaki                                                                                            |        |
| 🔗 Resource-efficient energy test and parameter estimation in continuous-variable quantum key distribution ( <i>12 pages</i> ) . . . . .          | 012409 |
| Cosmo Lupo                                                                                                                                       |        |
| Perfect quantum-state synchronization ( <i>9 pages</i> ) . . . . .                                                                               | 012410 |

| Coherent perfect absorption of quantum light ( <i>17 pages</i> ) . . . . .                                                                                             | 013716 |
| Anton N. Vetlugin                                                                                                                                                      |        |
| Insights into Fano-type resonance fluorescence from quantum-dot-metal-nanoparticle molecules with a squeezed vacuum ( <i>14 pages</i> ) . . . . .                      | 013717 |
| Shuting Shen, Zhiming Wu, Jiahua Li, and Ying Wu                                                                                                                       |        |
| Kerr-spacetime geometric optics for vortex beams ( <i>9 pages</i> ) . . . . .                                                                                          | 013718 |
| Fabrizio Tamburini, Fabiano Feleppa, Ignazio Licata, and Bo Thidé                                                                                                      |        |
| Collective effects in the photon statistics of thermal atomic ensembles ( <i>12 pages</i> ) . . . . .                                                                  | 013719 |
| Sofia Ribeiro, Thomas F. Cutler, Charles S. Adams, and Simon A. Gardiner                                                                                               |        |
| Entanglement preparation and nonreciprocal excitation evolution in giant atoms by controllable dissipation and coupling ( <i>8 pages</i> ) . . . . .                   | 013720 |
| Hongwei Yu, Zhihai Wang, and Jin-Hui Wu                                                                                                                                |        |
| Optomechanically induced Faraday and splitting effects in a double-cavity optomechanical system ( <i>9 pages</i> ) . . . .                                             | 013721 |
| Tie Wang, Cheng-Hua Bai, Dong-Yang Wang, Shutian Liu, Shou Zhang, and Hong-Fu Wang                                                                                     |        |
| Beyond the Rabi model: Light interactions with polar atomic systems in a cavity ( <i>11 pages</i> ) . . . . .                                                          | 013722 |
| Giovanni Scala, Karolina Słowik, Paolo Facchi, Saverio Pascazio, and Francesco V. Pepe                                                                                 |        |
| Dimensional reduction of cavities with axial symmetry: A complete analysis of when an optical fiber is approximately one dimensional ( <i>13 pages</i> ) . . . . .     | 013723 |
| Daniel Grimmer, Richard Lopp, and Eduardo Martín-Martínez                                                                                                              |        |
