RAPID COMMUNICATIONS

Chaos and nonlinear dynamical systems

Nonlinear dynamics at a Hopf bifurcation with axisymmetry breaking in a jet R3695
Ionut Danaila, Jan Dušek, and Fabien Anselmet

Effect of boundary conditions on fluctuations measures R3699
Debabrata Biswas

Classical fluids

Extended self-similarity in kinetic surface roughening R3703
Arindam Kundagrami, Chandan Dasgupta, P. Punyindu, and S. Das Sarma

Surface tension and dynamics of fingering patterns R3707
F. X. Magdaleno and J. Casademunt

Liquid crystals

Critical behavior at the nematic to lamellar phase transitions: A synchrotron x-ray scattering study R3711
S. T. Shin, J. D. Brock, Mark Sutton, J. D. Litster, and Satyendra Kumar

Critical orientational states in lyotropic liquid crystals induced by a magnetic field R3715
L. M. Vega, J. J. Bonvent, G. Barbero, and E. A. Oliveira

Complex fluids and polymers

Reactive wetting- and dewetting-induced diffusion-limited aggregation R3719
D. W. Zheng, Weijia Wen, and K. N. Tu

Iterative solutions of integral equations and structural stability of fluids R3723
G. Malescio, P. V. Giaquinta, and Y. Rosenfeld

Generic density functional for electric double layers in a molecular solvent R3727
T. Biben, J. P. Hansen, and Y. Rosenfeld

Shear flow effects on phase separation of entangled polymer blends R3731
N. Clarke and T. C. B. McLeish

Biological physics

Frequency locking of meandering spiral waves in cardiac tissue R3735
Bradley J. Roth

Mixed states in a neural network model R3739
Z. Tan and M. K. Ali

Size distribution of vesicles with topological defects R3742
Georg Foltin

1063-651X(199804)57:4;1-0

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 57, NUMBER 4** **APRIL 1998**

Plasma physics

Effects of a prepulse on γ-ray radiation produced by a femtosecond laser with only 5-mJ energy R3746
P. Zhang, J. T. He, D. B. Chen, Z. H. Li, Y. Zhang, J. G. Bian, L. Wang, Z. L. Li, B. H. Feng, X. L. Zhang, D. X. Zhang, X. W. Tang, and J. Zhang

ARTICLES

General methods of statistical physics

Takens-Bogdanov random walks 3749
E. R. Tracy, X. Z. Tang, and C. Kulp
Survival probability of a mobile particle in a fluctuating field 3757
Satya N. Majumdar and Stephen J. Cornell
Superparamagnetic clustering of data 3767
Shai Wiseman, Marcelo Blatt, and Eytan Domany
Monte Carlo method to calculate the central charge and critical exponents 3784
Paul J. M. Bastiaansen and Hubert J. F. Knops
Coniglio-Klein mapping in the metastable region 3797
Camillo Padoa Schioppa, Francesco Sciortino, and Piero Tartaglia
Generalized hierarchical model of defect development and self-organized criticality 3804
M. G. Shnirman and Y. A. Tyurina
Stochastic model for a vortex depinning in random media 3814
Byungnam Kahng, Kwangho Park, and Jinhee Park
Mechanisms of synchronization and pattern formation in a lattice of pulse-coupled oscillators 3820
Albert Díaz-Guilera, Conrad J. Pérez, and Alex Arenas
Solving the generalized Langevin equation with the algebraically correlated noise 3829
T. Srokowski and M. Płoszajczak
Theory of traffic jam in a one-lane model 3839
Hisao Hayakawa and Ken Nakanishi
Isothermal Maxwell demon as a quantum ‘‘sewing machine’’ 3846
V. Čápek
Genetic algorithm dynamics on a rugged landscape 3853
Stefan Bornholdt
Interaction effects in the spectrum of the three-dimensional Ising model 3861
P. Provero
Absorption-desorption phase transition induced by parametric modulation 3866
C. Van den Broeck and R. Kawai
Confined harmonically interacting spin-polarized fermions 3871
F. Brosens, J. T. Devreese, and L. F. Lemmens
Dynamics of fractures in quenched disordered media 3878
Guido Caldarelli, Raffaele Cafiero, and Andrea Gabrielli
Geometry of dynamics and phase transitions in classical lattice φ^4 theories 3886
Lando Caiani, Lapo Casetti, Cecilia Clementi, Giulio Pettini, Marco Pettini, and Raoul Gatto
Partial factorization of wave functions for a quantum dissipative system 3900
C. P. Sun, Y. B. Gao, H. F. Dong, and S. R. Zhao
Wave propagation in heterogeneous excitable media 3905
I. Schebesch and H. Engel
Large-system hydrodynamic limit for color conductivity in two dimensions 3911
Wm. G. Hoover, Kevin Boercker, and Harald A. Posch

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 57, NUMBER 4** **APRIL 1998**

Transport of particles caused by correlation between additive and multiplicative noise 3917
J. H. Li and Z. Q. Huang
Imitation games: Power-law sensitivity to initial conditions and nonextensivity 3923
Andrés R. R. Papa and Constantino Tsallis
Energy transport and optical line shapes in dimers: Analytical description of the influence of colored noise 3928
Ch. Warns, I. Barvik, and P. Reineker
Residence time distribution of a Brownian particle 3937
Alexander M. Berezhkovskii, Veaceslav Zaloj, and Noam Agmon
Functional approach for quantum systems with continuous spectrum 3948
Roberto Laura and Mario Castagnino
Wigner-Kirkwood quantum corrections for the pair distribution function in a plasma 3962
Marie-Madeleine Gombert and Daniel Léger
Properties of resonant activation phenomena 3990
Marián Boguñá, Josep M. Porrà, Jaume Masoliver, and Katja Lindenberg
Long memory, fractal statistics, and Anderson localization for chemical waves and patterns with random propagation velocities 4003
Marcel Ovidiu Vlad, John Ross, and Friedemann W. Schneider

Chaos and nonlinear dynamical systems

Collectivity embedded in complex spectra of finite interacting Fermi systems: Nuclear example 4016
S. Drożdż, S. Nishizaki, J. Speth, and M. Wójcik
Light squeezing at the transition to quantum chaos 4023
Kirill N. Alekseev and Jan Peřina
Bifurcations and chaos in a coupled superconducting-quantum-interference-device ring–resonator system 4035
T. D. Clark, J. F. Ralph, R. J. Prance, H. Prance, J. Diggins, and R. Whiteman
Implications of varying communication speeds in ‘‘globally’’ coupled maps 4041
Sudeshna Sinha
Stabilizing unstable orbits by slow modulation of a control parameter in a dissipative dynamic system 4046
A. N. Pisarchik, B. F. Kuntsevich, and R. Corbalán
Nonlinear dynamics in periodic phase space 4054
A. Iomin, D. Gangardt, and S. Fishman
Toward semiclassical theory of quantum level correlations of generic chaotic systems 4063
Daniel L. Miller
Chaotic properties of dilute two- and three-dimensional random Lorentz gases: Equilibrium systems 4077
H. van Beijeren, Arnulf Latz, and J. R. Dorfman
Relevance of chaos in numerical solutions of quantum billiards 4095
Baowen Li, Marko Robnik, and Bambi Hu
Scenario for the onset of space-time chaos 4106
Gilad Goren, Jean-Pierre Eckmann, and Itamar Procaccia
Synchronization of spatiotemporal chaos in asymmetrically coupled map lattices 4135
Yu Jiang and P. Parmananda
Universal singularity at the closure of a gap in a random matrix theory 4140
E. Brézin and S. Hikami

Classical fluids

Dynamical quantum chaos as fluid turbulence 4150
Tzihong Chiueh
Cascade and dynamo action in a shell model of magnetohydrodynamic turbulence 4155
Peter Frick and Dmitriy Sokoloff

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 57, NUMBER 4** **APRIL 1998**

Short-range ordering in the supercooled states of a dimer system 4165
Wen-Jong Ma and Shiow-Fon Tsay
Sound of sonoluminescence 4170
H.-Thomas Elze, Takeshi Kodama, and Johann Rafelski
Electrical conductivity in a dilute gas far from equilibrium 4186
V. Garzó
Convection in a layer heated from below with a nearly insulating boundary 4198
R. M. Clever and F. H. Busse
Neutron-diffraction study of two organic liquids conducting under a low electric field 4206
F. J. Mompeán, A. Chahid, D. Martín, and B. Ouladdiaf
Statistical mechanics of fluids under internal constraints: Rigorous results for the one-dimensional hard rod fluid 4211
David S. Corti and Pablo G. Debenedetti
Thermal lattice Boltzmann simulations of variable Prandtl number turbulent flows 4227
Min Soe, George Vahala, Pavol Pavlo, Linda Vahala, and Hudong Chen
Influence of the Soret effect on convection of binary fluids 4238
St. Hollinger and M. Lücke
Model for convection in binary liquids 4250
St. Hollinger, M. Lücke, and H. W. Müller
Physical parameters affecting sonoluminescence: A self-consistent hydrodynamic study 4265
L. Yuan, H. Y. Cheng, M.-C. Chu, and P. T. Leung
Crossover behavior in turbulent velocity fluctuations 4281
Jens Eggers and Z. Jane Wang

Liquid crystals

Spatial correlation effects of molecules on the helical structure of cholesteric liquid crystals 4289
Liangbin Hu, Yonggang Jiang, and Ruibao Tao
Nonequilibrium structures in the thin layers of ferronematics 4296
Andrej Yu. Zubarev and Larisa Yu. Iskakova
Critical behavior of a smectic-*A* to nematic phase transition imbedded in a random network of voids 4305
Sihai Qian, Germano S. Iannacchione, and Daniele Finotello
Deuteron spin-spin relaxation study of second-order director fluctuations in the nematogen 5CB 4316
Ronald Y. Dong

Complex fluids and polymers

Quantitative phase-field modeling of dendritic growth in two and three dimensions 4323
Alain Karma and Wouter-Jan Rappel
Primary instabilities in Faraday waves under an arbitrarily periodic excitation 4350
Chen Weizhong and Wei Rongjue
Hierarchical model of slow constrained dynamics 4354
M. A. Muñoz, A. Gabrielli, H. Inaoka, and L. Pietronero
Thermodynamic stability of periodic and quasiperiodic crystals within a van der Waals approximation 4361
R. Achrayah and M. Baus
Tethered networks in two dimensions: A low-temperature view 4368
Paul E. Lammert and Dennis E. Discher
Temporally disordered granular flow: A model of landslides 4375
Bosiljka Tadić
Calculating exact propagators in single-file systems via the reflection principle 4382
Christian Rödenbeck, Jörg Kärger, and Karsten Hahn

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 57, NUMBER 4** **APRIL 1998**

Rotational correlation functions and apparently enhanced translational diffusion in a free-energy landscape model for the α relaxation in glass-forming liquids 4398
Gregor Diezemann, Hans Sillescu, Gerald Hinze, and Roland Böhmer
Brownian motion and polymer statistics on certain curved manifolds 4411
Radu P. Mondescu and M. Muthukumar
Influence of the softness of the repulsive core interaction on cluster melting 4420
C. Rey, J. García-Rodeja, L. J. Gallego, and M. J. Grimson
Vibrational dynamics of cluster-cluster aggregations 4426
Takamichi Terao, Arifumi Yamaya, and Tsuneyoshi Nakayama
Soret feedback in thermal diffusion of suspensions 4431
Nelson V. Tabiryan and Weili Luo
Models of stress fluctuations in granular media 4441
P. Claudin, J.-P. Bouchaud, M. E. Cates, and J. P. Wittmer
''Partial pressures'' supported by granulometric classes in polydisperse granular media 4458
Olivier Tsoungui, Denis Vallet, Jean-Claude Charmet, and Stéphane Roux
Permeability of three-dimensional fracture networks 4466
N. Koudina, R. Gonzalez Garcia, J.-F. Thovert, and P. M. Adler
Stochastic equation for conserved growth in a restricted solid-on-solid model 4480
Zhi-Feng Huang and Bing-Lin Gu
Virial coefficients of hard-sphere mixtures 4486
E. Enciso, N. G. Almarza, M. A. González, and F. J. Bermejo
Boundary effects on the angle of repose in rotating cylinders 4491
Christian M. Dury, Gerald H. Ristow, Jamie L. Moss, and Masami Nakagawa
Diffusing-light spectroscopies beyond the diffusion limit: The role of ballistic transport and anisotropic scattering 4498
P.-A. Lemieux, M. U. Vera, and D. J. Durian
In situ time response measurement of the microspheres dispersed in electrorheological fluids 4516
Weijia Wen, D. W. Zheng, and K. N. Tu
Structure function and fractal dimension of diffusion-limited colloidal aggregates 4520
Mohammed Lach-hab, Agustín E. González, and Estela Blaisten-Barojas
Metastability of a granular surface in a spinning bucket 4528
Chuck Yeung
Inhomogeneous magnetization in dipolar ferromagnetic liquids 4535
B. Groh and S. Dietrich
Mesomorphic polymorphism of binary mixtures of water and surfactants 4547
A. Linhananta and D. E. Sullivan

Biological physics

Fractional Brownian motion as a nonstationary process: An alternative paradigm for DNA sequences 4558
Paolo Allegrini, Marco Buiatti, Paolo Grigolini, and Bruce J. West
Phase-ordering kinetics of cemetery organization in ants 4568
Eric Bonabeau, Guy Theraulaz, Vincent Fourcassié, and Jean-Louis Deneubourg
Statistics of extinction and survival in Lotka-Volterra systems 4572
Guillermo Abramson and Damián H. Zanette
Synchronous oscillations in the cerebral cortex 4578
P. A. Robinson, J. J. Wright, and C. J. Rennie
Phyllotaxis: Its geometry and dynamics 4589
Sy-Sang Liaw
Unstable periodic orbits in human cardiac rhythms 4594
K. Narayanan, R. B. Govindan, and M. S. Gopinathan

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 57, NUMBER 4** **APRIL 1998**

Adaptation and optimal chemotactic strategy for *E. coli* 4604
S. P. Strong, B. Freedman, William Bialek, and R. Koberle
First principles calculation of the activity of cytochrome P450 4618
M. D. Segall, M. C. Payne, S. W. Ellis, G. T. Tucker, and R. N. Boyes
Eccentric motions of spiral cores in aggregates of *Dictyostelium* cells 4622
Nobuaki Nishiyama

Plasma physics

Screening potential in lattices and high-density plasmas 4627
X. H. Do, M. Amari, J. Butaux, and H. Nguyen
Nonlinear ionization waves 4633
Tzihong Chiueh and David M. T. Kuo
Amplitude collapse of nonlinear double-layer oscillations 4638
M. Wendt, I. Axnäs, and S. Torvén
Propagation of an ultrashort, intense laser pulse in a relativistic plasma 4645
Burke Ritchie and Christopher D. Decker
Competing effects of collisional ionization and radiative cooling in inertially confined plasmas 4650
N. C. Woolsey, B. A. Hammel, C. J. Keane, C. A. Back, J. C. Moreno, J. K. Nash, A. Calisti, C. Mossé, R. Stamm, B. Talin, A. Asfaw, L. S. Klein, and R. W. Lee
Measurements of early time radiation asymmetry in vacuum and methane-filled *Hohlraums* with the reemission ball technique 4663
G. R. Magelssen, N. D. Delamater, E. L. Lindman, and A. A. Hauer
Dielectric function and electrical dc conductivity of nonideal plasmas 4673
G. Röpke
Ionization and recombination rates of atomic oxygen in high-temperature air plasma flows 4684
A. Bourdon, Y. Térésiak, and P. Vervisch
X-ray scattering as a dense plasma diagnostic 4693
Eran Nardi, Zeev Zinamon, David Riley, and Nigel C. Woolsey
Direct calculation of inverse-bremsstrahlung absorption in strongly coupled, nonlinearly driven laser plasmas 4698
Susanne Pfalzner and Paul Gibbon

Physics of beams

Nonlinear effects of phase modulation in an electron storage ring 4706
J. M. Byrd, W.-H. Cheng, and F. Zimmermann
Stability of anisotropic beams with space charge 4713
I. Hofmann
Self-consistent beam distributions with space charge and dispersion in a circular ring lattice 4725
Marco Venturini and Martin Reiser

Classical physics, including nonlinear media

Compacton solutions for a class of two parameter generalized odd-order Korteweg–de Vries equations 4733
Bishwajyoti Dey
Switching between bistable states in a discrete nonlinear model with long-range dispersion 4739
Magnus Johansson, Yuri B. Gaididei, Peter L. Christiansen, and K. Ø. Rasmussen
Energy dissipation and trapping of particles moving on a rough surface 4743
C. Henrique, M. A. Aguirre, A. Calvo, I. Ippolito, S. Dippel, G. G. Batrouni, and D. Bideau
Analytical solution for the modified nonlinear Schrödinger equation describing optical shock formation 4751
Jairo R. de Oliveira and Marco A. de Moura

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 57, NUMBER 4** **APRIL 1998**

Dynamical evolution of multiple four-wave-mixing processes in an optical fiber 4757
D. L. Hart, Arthur F. Judy, Rajarshi Roy, and James W. Beletic
First-order perturbed Korteweg–de Vries solitons 4775
R. A. Kraenkel
Dielectric and optical properties of pure liquids by means of *ab initio* reaction field theory 4778
Yi Luo, Patrick Norman, Hans Ågren, Kristian O. Sylvester-Hvid, and Kurt V. Mikkelsen
Kink solitons of the double-quadratic model in the presence of an external spatially inhomogeneous force 4786
J. A. Hołyst

Computational physics

Numerical technique for studying stochastic resonance 4789
M. V. Tretyakov
Physics-motivated numerical solvers for partial differential equations 4795
L. San Martin and Y. Oono

BRIEF REPORTS

General methods of statistical physics

Multiplicative processes and power laws 4811
Didier Sornette
Overhangs in interface growth and ground-state paths 4814
Matteo Marsili and Yi-Cheng Zhang
Dynamical reduction of discrete systems based on the renormalization-group method 4817
T. Kunihiro and J. Matsukidaira

Classical fluids

Liquid polymorphism of simple fluids within a van der Waals theory 4821
Carlos F. Tejero and Marc Baus

Liquid crystals

Infinitely thin disks exhibit a first order nematic-columnar phase transition 4824
Martin A. Bates and Daan Frenkel

Complex fluids and polymers

Static and dynamic epidemia on chains and trees with two- and three-dimensional loops 4827
Kristinka Ivanova
Absence of inelastic collapse in a realistic three ball model 4831
D. Goldman, M. D. Shattuck, C. Bizon, W. D. McCormick, J. B. Swift, and Harry L. Swinney
Lattice Boltzmann scheme with real numbered solid density for the simulation of flow in porous media 4834
Orla Dardis and John McCloskey

Biological physics

Translational diffusion in phospholipid bilayer membranes 4838
A. Haibel, G. Nimtz, R. Pelster, and R. Jaggi
Genetic polymorphism in an evolving population 4842
H. Y. Lee, D. Kim, and M. Y. Choi

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 57, NUMBER 4** **APRIL 1998**

Plasma physics

Electromagnetic modes in cold magnetized strongly coupled plasmas 4846
I. M. Tkachenko, J. Ortner, and V. M. Rylyuk

Classical physics, including nonlinear media

Riccati parameter modes from Newtonian free damping motion by supersymmetry 4850
Haret C. Rosu and Marco A. Reyes

Cumulative Author Index 4853
