PHYSICAL REVIEW A

THIRD SERIES, VOLUME 54, NUMBER 6

DECEMBER 1996

## ARTICLES

### Fundamental concepts

|                                                                                   |      |
|-----------------------------------------------------------------------------------|------|
| Teleportation of a cavity-radiation-field state: An alternative scheme . . . . .  | 4661 |
| M. H. Y. Moussa                                                                   |      |
| Quasiclassical dynamics in a closed quantum system . . . . .                      | 4670 |
| Adrian Kent                                                                       |      |
| Time of arrival in quantum mechanics . . . . .                                    | 4676 |
| Norbert Grot, Carlo Rovelli, and Ranjeet S. Tate                                  |      |
| Quantum kinematic theory of a point charge in a constant magnetic field . . . . . | 4691 |
| J. Krause                                                                         |      |
| Quantum logic using polarized photons . . . . .                                   | 4701 |
| Päivi Törmä and Stig Stenholm                                                     |      |
| General fidelity limit for quantum channels . . . . .                             | 4707 |
| Howard Barnum, Christopher A. Fuchs, Richard Jozsa, and Benjamin Schumacher       |      |
| Quantum phase amplification . . . . .                                             | 4712 |
| G. M. D'Ariano, C. Macchiavello, N. Sterpi, and H. P. Yuen                        |      |
| Classical limit and quantum measurements in the detection of photons . . . . .    | 4719 |
| J. C. Houard                                                                      |      |
| Simple quantum error-correcting codes . . . . .                                   | 4741 |
| A. M. Steane                                                                      |      |
| Quantum tunneling in the Wigner representation . . . . .                          | 4752 |
| M. S. Marinov and Bilha Segev                                                     |      |
| Semiclassical perturbation approach to quantum reflection . . . . .               | 4763 |
| N. T. Maitra and E. J. Heller                                                     |      |
| Applications of the complex geometric phase for metastable systems . . . . .      | 4770 |
| S. Massar                                                                         |      |

### Atomic and molecular structure and dynamics

|                                                                                                                                        |      |
|----------------------------------------------------------------------------------------------------------------------------------------|------|
| Relevance of relativistic exchange-correlation functionals and of finite nuclei in molecular density-functional calculations . . . . . | 4775 |
| Markus Mayer, Oliver D. Häberlen, and Notker Rösch                                                                                     |      |
| Electronic energies of americium from multiconfiguration Dirac-Fock calculations . . . . .                                             | 4783 |
| Elijah Johnson, M. O. Krause, and B. Fricke                                                                                            |      |
| Rydberg states about dipolar cores: The quantum dynamics of the long-range anisotropic interaction . . . . .                           | 4789 |
| L. Ya Baranov, F. Remacle, and R. D. Levine                                                                                            |      |
| <i>Ab initio</i> instanton molecular dynamics for the description of tunneling phenomena . . . . .                                     | 4802 |
| M. I. Katsnelson, M. van Schilfgaarde, V. P. Antropov, and B. N. Harmon                                                                |      |
| Separation of the exchange-correlation potential into exchange plus correlation: An optimized effective potential approach . . . . .   | 4810 |
| Claudia Filippi, C. J. Umrigar, and Xavier Gonze                                                                                       |      |
| Theory of muon spin relaxation of gaseous C <sub>2</sub> H <sub>4</sub> Mu . . . . .                                                   | 4815 |
| Ralph Eric Turner and R. F. Snider                                                                                                     |      |
| Dielectric screening in the Thomas-Fermi model . . . . .                                                                               | 4830 |
| B. K. Shivamoggi and P. Mulser                                                                                                         |      |
| Universal relationship between optical emission and absorption of complex systems: An alternative approach . . . .                     | 4837 |
| Denise A. Sawicki and Robert S. Knox                                                                                                   |      |
| Ramsey patterns for multiquantum transitions in fountain experiments . . . . .                                                         | 4842 |
| Douglas McColm                                                                                                                         |      |

PHYSICAL REVIEW A

THIRD SERIES, VOLUME 54, NUMBER 6

DECEMBER 1996

|                                                                                                                              |      |
|------------------------------------------------------------------------------------------------------------------------------|------|
| Stability of light positronic atoms: Quantum Monte Carlo studies .....                                                       | 4849 |
| A. Harju, B. Barbiellini, and R. M. Nieminen                                                                                 |      |
| Two-photon Rabi oscillations .....                                                                                           | 4854 |
| A. F. Linskens, I. Holleman, N. Dam, and J. Reuss                                                                            |      |
| Expansions of the pair distribution function and the second-order density matrix in terms of homogeneous functionals .....   | 4863 |
| Shubin Liu                                                                                                                   |      |
| Highly excited charged two-body systems in a magnetic field: A perturbation theoretical approach to classical dynamics ..... | 4868 |
| W. Becken and P. Schmelcher                                                                                                  |      |
| Corrections to $O(\alpha^7 mc^2)$ fine-structure splittings in helium .....                                                  | 4882 |
| Tao Zhang and G. W. F. Drake                                                                                                 |      |

## Atomic and molecular collisions and interactions

|                                                                                                                                                        |      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Continuum-distorted-wave-final-state approximation in positron-hydrogenic atom (ion) collisions with positronium formation .....                       | 4923 |
| O. A. Fojón, R. D. Rivarola, R. Gayet, J. Hanssen, and P. A. Hervieux                                                                                  |      |
| One- and two-electron transitions in slow $C^{5+}$ -He collisions: Total and angle-differential cross sections and coherence parameters .....          | 4931 |
| Wolfgang Fritsch and C. D. Lin                                                                                                                         |      |
| Nonrelativistic factorizable scattering theory and the Calogero-Sutherland model .....                                                                 | 4943 |
| Changrim Ahn, Kong-Ju-Bock Lee, and Soonkeon Nam                                                                                                       |      |
| Measurements of anomalous elastic scattering of 59.54-keV photons .....                                                                                | 4947 |
| C. Baraldi, E. Casnati, A. Tartari, M. Andreis, and B. Singh                                                                                           |      |
| Radiative electron capture and the photoelectric effect at high energies .....                                                                         | 4954 |
| A. Ichihara, T. Shirai, and Jörg Eichler                                                                                                               |      |
| Bound-free electron-positron pair creation in relativistic heavy-ion collisions as a charge-transfer process .....                                     | 4960 |
| Dorin C. Ionescu and Jörg Eichler                                                                                                                      |      |
| Ionization in coplanar symmetric ( $e,2e$ ) experiments of $N_2$ and CO at intermediate energies .....                                                 | 4968 |
| S. Rioual, G. Nguyen Vien, and A. Pochat                                                                                                               |      |
| Absolute determination of zero-energy phase shifts for multiparticle single-channel scattering: Generalized Levinson theorem .....                     | 4978 |
| Leonard Rosenberg and Larry Spruch                                                                                                                     |      |
| Generalized Levinson theorem: Applications to electron-atom scattering .....                                                                           | 4985 |
| Leonard Rosenberg and Larry Spruch                                                                                                                     |      |
| Resonance-enhanced dissociation of a molecular ion below its electronic excitation threshold .....                                                     | 4992 |
| A. E. Orel and K. C. Kulander                                                                                                                          |      |
| Radiative decay of the $HeH^+(b\ ^3\Sigma^+)$ molecular ion .....                                                                                      | 4997 |
| M. I. Chibisov, F. B. Yousif, P. J. T. Van der Donk, and J. B. A. Mitchell                                                                             |      |
| Hyperspherical coupled-channel calculations of positronium formation in low-energy positron-helium collisions ..                                       | 5004 |
| Akinori Igarashi, Nobuyuki Toshima, and Toshizo Shirai                                                                                                 |      |
| Dissociative recombination of $H_2^+$ : Product state information and very large cross sections of vibrationally excited $H_2^+$ .....                 | 5010 |
| Wim J. van der Zande, Jacek Semaniak, Veysel Zengin, Göran Sundström, Stefan Rosén, Christian Strömholm, Sheldon Datz, Håkan Danared, and Mats Larsson |      |
| Elastic and inelastic processes in $H^+ + C_2H_2$ collisions below the 1.5-keV regime .....                                                            | 5019 |
| M. Kimura, Y. Li, G. Hirsch, and R. J. Buenker                                                                                                         |      |
