PHYSICAL REVIEW A

THIRD SERIES, VOLUME 61, NUMBER 2

FEBRUARY 2000

|                                                                                                                                        |        |
|----------------------------------------------------------------------------------------------------------------------------------------|--------|
| Self-pulsing instabilities in an optical parametric oscillator: Experimental observation and modeling of the mechanism (4 pages) ..... | 021805 |
| Pierre Suret, Dominique Derozier, Marc Lefranc, Jaouad Zemmouri, and Serge Bielawski                                                   |        |

## ARTICLES

### Fundamental concepts

|                                                                                                                         |        |
|-------------------------------------------------------------------------------------------------------------------------|--------|
| Bound states of neutral particles in external electric fields (8 pages) .....                                           | 022101 |
| Qiong-gui Lin                                                                                                           |        |
| Quantum synthesis of arbitrary unitary operators (6 pages) .....                                                        | 022102 |
| B. Hladký, G. Drobný, and V. Bužek                                                                                      |        |
| Factorized representation for parity-projected Wigner $d^j(\beta)$ matrices (6 pages) .....                             | 022103 |
| N. L. Manakov, A. V. Meremianin, and Anthony F. Starace                                                                 |        |
| Quantum equations of motion for a dissipative system (15 pages) .....                                                   | 022104 |
| R. J. Wysocki                                                                                                           |        |
| Quantum anti-Zeno effect (5 pages) .....                                                                                | 022105 |
| M. Lewenstein and K. Rzażewski                                                                                          |        |
| Experimental demonstration of Greenberger-Horne-Zeilinger correlations using nuclear magnetic resonance (5 pages) ..... | 022106 |
| Richard J. Nelson, David G. Cory, and Seth Lloyd                                                                        |        |
| Exact diagonalization of two quantum models for the damped harmonic oscillator (14 pages) .....                         | 022107 |
| M. Rosenau da Costa, A. O. Caldeira, S. M. Dutra, and H. Westfahl, Jr.                                                  |        |
| Quantum approach to coupling classical and quantum dynamics (4 pages) .....                                             | 022108 |
| Lajos Diósi, Nicolas Gisin, and Walter T. Strunz                                                                        |        |
| Violations of local realism in multiphoton interference experiments (5 pages) .....                                     | 022109 |
| Marek Żukowski                                                                                                          |        |
| Exact result for the force autocorrelation in the rotating-wave approximation (4 pages) .....                           | 022110 |
| G. W. Ford and R. F. O'Connell                                                                                          |        |
| Violation of Bell's inequalities and two-mode quantum-optical state measurement (5 pages) .....                         | 022111 |
| J. W. Wu                                                                                                                |        |
| Anapole moments and magnetic fields in alkali-metal atoms from Stark mixing (6 pages) .....                             | 022112 |
| A. Bhattacharya and B. Talukdar                                                                                         |        |
| Optimal generalized quantum measurements for arbitrary spin systems (7 pages) .....                                     | 022113 |
| A. Acín, J. I. Latorre, and P. Pascual                                                                                  |        |
| Bell theorem involving all possible local measurements (6 pages) .....                                                  | 022114 |
| Dagomir Kaszlikowski and Marek Żukowski                                                                                 |        |
| Surface roughness contribution to the Casimir interaction between an isolated atom and a cavity wall (10 pages) .....   | 022115 |
| V. B. Bezerra, G. L. Klimchitskaya, and C. Romero                                                                       |        |
| Classical interventions in quantum systems. I. The measuring process (9 pages) .....                                    | 022116 |
| Asher Peres                                                                                                             |        |
| Classical interventions in quantum systems. II. Relativistic invariance (8 pages) .....                                 | 022117 |
| Asher Peres                                                                                                             |        |
| Time-of-arrival distribution for arbitrary potentials and Wigner's time-energy uncertainty relation (5 pages) ..        | 022118 |
| A. D. Baute, R. Sala Mayato, J. P. Palao, J. G. Muga, and I. L. Egusquiza                                               |        |
| Nonlocality without inequalities has not been proved for maximally entangled states (6 pages) .....                     | 022119 |
| Adán Cabello                                                                                                            |        |
