PHYSICAL REVIEW B

THIRD SERIES, VOLUME 53, NUMBER 10

1 MARCH 1996-II

|                                                                                                                                                               |       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Effective mass anisotropy of $\text{HgBa}_2\text{Ca}_3\text{Cu}_4\text{O}_{10}$ measured on a microcrystal by means of miniaturized torque magnetometry ..... | R6026 |
| D. Zech, J. Hofer, H. Keller, C. Rossel, P. Bauer, and J. Karpinski                                                                                           |       |
| $^{63,65}\text{Cu}$ indirect spin-spin coupling in $\text{La}_{1.85}\text{Sr}_{0.15}\text{CuO}_4$ .....                                                       | R6030 |
| R. E. Walstedt and S-W. Cheong                                                                                                                                |       |
| In-plane and out-of-plane thermal conductivity of a large single crystal of $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$ .....                                     | R6034 |
| M. Matsukawa, T. Mizukoshi, K. Noto, and Y. Shiohara                                                                                                          |       |

## ARTICLES

### Structure, structural phase transitions, mechanical properties, defects, etc.

|                                                                                                                                                                                               |      |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Thermal and vibrational investigation of crystal nucleation and growth from a physically confined and supercooled liquid .....                                                                | 6041 |
| R. Mu, Y. Xue, D. O. Henderson, and D. O. Frazier                                                                                                                                             |      |
| X-ray scattering and x-ray fluorescence from materials with rough interfaces .....                                                                                                            | 6048 |
| Dick K. G. de Boer                                                                                                                                                                            |      |
| Spectroscopic properties and upconversion mechanisms in $\text{Er}^{3+}$ -doped fluorindate glasses .....                                                                                     | 6065 |
| T. Catunda, L. A. O. Nunes, A. Florez, Y. Messaddeq, and M. A. Aegerter                                                                                                                       |      |
| Pressure dependence of static and dynamic ionicity of SiC polytypes .....                                                                                                                     | 6071 |
| G. Wellenhofer, K. Karch, P. Pavone, U. Rössler, and D. Strauch                                                                                                                               |      |
| Electric field dependence of pocket and nonpocket impurity gap modes in KI and the establishment of $\text{Ag}^+$ quadrupolar deformability .....                                             | 6076 |
| A. Rosenberg, K. W. Sandusky, B. P. Clayman, J. B. Page, and A. J. Sievers                                                                                                                    |      |
| $^1\text{H}$ NMR study of proton motions in thallium-deficient $\text{TlH}_2\text{PO}_4$ .....                                                                                                | 6104 |
| Jong Hyun Kim, Cheol Eui Lee, and Kwang-Sei Lee                                                                                                                                               |      |
| High-pressure elastic properties of the VI and VII phase of ice in dense $\text{H}_2\text{O}$ and $\text{D}_2\text{O}$ .....                                                                  | 6107 |
| H. Shimizu, T. Nabetani, T. Nishiba, and S. Sasaki                                                                                                                                            |      |
| Anharmonic interatomic potentials of diatomic and linear triatomic molecules studied by extended x-ray-absorption fine structure .....                                                        | 6111 |
| Toshihiko Yokoyama, Kaori Kobayashi, Toshiaki Ohta, and Akito Ugawa                                                                                                                           |      |
| Analysis of magnetic-resonance signals from mixed lattices with application to the $\text{AsO}_4^{4-}$ center in the $\text{Rb}_{1-x}(\text{NH}_4)_x\text{H}_2\text{PO}_4$ proton glass ..... | 6123 |
| A. N. Klymachyov, R. Xu, A. Wandelt, P. K. Kahol, and N. S. Dalal                                                                                                                             |      |
| Spatially resolved optical studies of $F$ -center diffusion in KBr crystals .....                                                                                                             | 6129 |
| O. Salminen, P. Riihola, A. Ozols, and T. Viitala                                                                                                                                             |      |
| First-principles calculation of the pressure dependence of phase equilibria in the Al-Li system .....                                                                                         | 6137 |
| Marcel H. F. Sluiter, Y. Watanabe, D. de Fontaine, and Y. Kawazoe                                                                                                                             |      |
| Spatial and temporal scaling of oxide cluster aggregation on a liquid-gallium surface .....                                                                                                   | 6152 |
| Y. L. Wang and S. J. Lin                                                                                                                                                                      |      |
| Coherent forward-scattering amplitude in transmission and grazing incidence Mössbauer spectroscopy .....                                                                                      | 6158 |
| L. Deák, L. Bottyán, D. L. Nagy, and H. Spiering                                                                                                                                              |      |
| Model interatomic potential for simulations in selenium .....                                                                                                                                 | 6165 |
| C. Oligschleger, R. O. Jones, S. M. Reimann, and H. R. Schober                                                                                                                                |      |
| Multiple-edge EXAFS refinement: Short-range structure in liquid and crystalline Sn .....                                                                                                      | 6174 |
| Andrea Di Cicco                                                                                                                                                                               |      |
