PHYSICAL REVIEW B THIRD SERIES, VOLUME 53, NUMBER 7 15 FEBRUARY 1996-I

Model for a random-matrix description of the energy-level statistics of disordered systems at the Anderson transition 3713
C. M. Canali
Theoretical investigation of the electronic structure of $LaCoO_3$ by *ab initio* molecular-orbital calculations 3731
Hidekazu Takahashi, Fumio Munakata, and Mitsugu Yamanaka
Sound propagation in density wave conductors and the effect of long-range Coulomb interaction 3741
Attila Virosztek and Kazumi Maki
Order-disorder and electronic transitions in $Ag_{2+\delta}S$ single crystals studied by photoemission spectroscopy 3746
S. R. Barman, N. Shanthi, A. K. Shukla, and D. D. Sarma
Calculation of intensities in grazing-emission x-ray fluorescence 3752
H. P. Urbach and P. K. de Bokx
Generalized Kohn-Sham schemes and the band-gap problem 3764
A. Seidl, A. Görling, P. Vogl, J. A. Majewski, and M. Levy
Vibronic energies in C_{60}^{n-} and the Jahn-Teller effect 3775
Mary C. M. O'Brien
Theory of biexcitons in one-dimensional polymers 3790
Frank B. Gallagher and Frank C. Spano

Semiconductors I: bulk

Hydrogen-effusion-induced structural changes and defects in *a*-Si:H films: Dependence upon the film microstructure 3804
K. Zellama, L. Chahed, P. Sládek, M. L. Thèye, J. H. von Bardeleben, and P. Roca i Cabarrocas
Ab initio study of fully relaxed divacancies in GaAs 3813
S. Pöykkö, M. J. Puska, and R. M. Nieminen
Interband magnetotransmission and coherent Raman spectroscopy of spin transitions in diluted magnetic $Pb_{1-x}Mn_xSe$ 3820
F. Geist, H. Pascher, N. Frank, and G. Bauer
Morphological effects on the electronic band structure of porous silicon 3827
M. Cruz, C. Wang, M. R. Beltrán, and J. Tagüeña-Martínez
Absorption edge, band tails, and disorder of amorphous semiconductors 3833
A. R. Zanatta and I. Chambouleyron
Decay of high-frequency phonons in amorphous silicon 3837
A. J. Scholten and J. I. Dijkhuis
Molecular-dynamics investigations of conformational fluctuations and low-energy vibrational excitations in *a*-Si:H 3841
P. A. Fedders and D. A. Drabold
Collision-duration time for optical-phonon emission in semiconductors 3846
Paolo Bordone, Dragica Vasileska, and David K. Ferry

Semiconductors II: surfaces, interfaces, microstructures, and related topics

Scanning-tunneling-microscopy study of initial stages of Au adsorption on vicinal Si(111) surfaces 3856
Motoshi Shibata, Isao Sumita, and Masato Nakajima
Exchange-correlation energy of a quasi-two-dimensional electron gas: A Hartree self-consistent approach 3861
M. Combescot, O. Betbeder-Matibet, and C. Benoit a la Guillaume
Band structure of Al/Si/*n*-type GaAs with a strained Si interfacial layer 3879
Z. Chen, S. N. Mohammad, and H. Morkoç
Electronic states in quasi-one-dimensional wires with nonuniform magnetic fields 3885
Y. Takagaki and K. Ploog
Relation between barrier conductance and Coulomb blockade peak splitting for tunnel-coupled quantum dots 3893
John M. Golden and Bertrand I. Halperin
