PHYSICAL REVIEW B

THIRD SERIES, VOLUME 54, NUMBER 1

1 JULY 1996-I

|                                                                                                                                                                                             |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Ruderman-Kittel interaction in one dimension for arbitrary coupling constant .....                                                                                                          | 59  |
| W. Baltensperger and J. S. Helman                                                                                                                                                           |     |
| Torque method for the theoretical determination of magnetocrystalline anisotropy .....                                                                                                      | 61  |
| Xindong Wang, Ruqian Wu, Ding-sheng Wang, and A. J. Freeman                                                                                                                                 |     |
| Scaling properties of spin-reorientation transitions in magnetic thin films with surface anisotropy .....                                                                                   | 65  |
| Xiao Hu, Ruibao Tao, and Yoshiyuki Kawazoe                                                                                                                                                  |     |
| Two-magnon light scattering in $\text{Bi}_2\text{CuO}_4$ .....                                                                                                                              | 68  |
| M. J. Konstantinović, Z. Konstantinović, and Z. V. Popović                                                                                                                                  |     |
| <b>Superfluidity and superconductivity</b>                                                                                                                                                  |     |
| Low-field phase diagram of layered superconductors: The role of electromagnetic coupling .....                                                                                              | 72  |
| Gianni Blatter, Vadim Geshkenbein, Anatoli Larkin, and Henrik Nordborg                                                                                                                      |     |
| NMR relaxation rate in the superconducting state of the organic conductor $\kappa\text{-(BEDT-TTF)}_2\text{Cu}[\text{N}(\text{CN})_2]\text{Br}$ .....                                       | 76  |
| K. Kanoda, K. Miyagawa, A. Kawamoto, and Y. Nakazawa                                                                                                                                        |     |
| Spin-glass ordering of Fe-doped $\text{La}_{2-x}\text{Sr}_x\text{CuO}_4$ .....                                                                                                              | 80  |
| J. Olejniczak and A. J. Zaleski                                                                                                                                                             |     |
| Vortex-glass-type transition in $\text{YBa}_2\text{Cu}_3\text{O}_{7-\delta}$ ceramics .....                                                                                                 | 84  |
| V. V. Makarov and Y. Kopelevich                                                                                                                                                             |     |
| Iodine intercalation in $\text{Bi}_2\text{Sr}_2\text{Ca}(\text{Cu}_{1-z}\text{Co}_z)_2\text{O}_{8+\delta}$ with different $\delta$ values .....                                             | 86  |
| T. Kluge, A. Fujiwara, M. Kato, and Y. Koike                                                                                                                                                |     |
| Instability of the local charge-density-wave potential energy for $\text{BaBiO}_{3-\delta}$ .....                                                                                           | 90  |
| Hyun-Tak Kim                                                                                                                                                                                |     |
| Temperature dependence of the sublattice magnetization of the antiferromagnet $\text{Ca}_{0.85}\text{Sr}_{0.15}\text{CuO}_2$ .....                                                          | 93  |
| A. Lombardi, M. Mali, J. Roos, D. Brinkmann, and I. Mangelschots                                                                                                                            |     |
| Evidence of apical oxygen in artificially superconducting $\text{SrCuO}_2\text{-BaCuO}_2$ thin films: A Raman characterization ..                                                           | 97  |
| Shen Zhu, D. P. Norton, J. E. Chamberlain, F. Shahedipour, and H. W. White                                                                                                                  |     |
| Angular dependence of the artificially induced anisotropy in $a$ -axis-oriented $\text{EuBa}_2\text{Cu}_3\text{O}_7/\text{PrBa}_2\text{Cu}_3\text{O}_7$ superconducting superlattices ..... | 101 |
| M. Vélez, E. M. González, J. I. Martín, and J. L. Vicent                                                                                                                                    |     |

## ARTICLES

### Structure, structural phase transitions, mechanical properties, defects, etc.

|                                                                                                                                             |     |
|---------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Femtosecond studies of the phase transition in $\text{Ti}_2\text{O}_3$ .....                                                                | 105 |
| H. J. Zeiger, T. K. Cheng, E. P. Ippen, J. Vidal, G. Dresselhaus, and M. S. Dresselhaus                                                     |     |
| Structure, dynamics, and phase transitions in the fullerene derivatives $\text{C}_{60}\text{O}$ and $\text{C}_{61}\text{H}_2$ .....         | 124 |
| C. Meingast, G. Roth, L. Pintschovius, R. H. Michel, C. Stoermer, M. M. Kappes, P. A. Heiney, L. Brard, R. M. Strongin, and A. B. Smith III |     |
| Tight-binding study of tilt grain boundaries in diamond .....                                                                               | 132 |
| J. R. Morris, C. L. Fu, and K. M. Ho                                                                                                        |     |
| Model for radiation-induced electrical degradation of $\alpha\text{-Al}_2\text{O}_3$ crystals .....                                         | 139 |
| Xiang-Fu Zong, Cheng-Fu Shen, Song Liu, Yi Chen, Renjun Zhang, Y. Chen, Jane G. Zhu, B. D. Evans, and R. Gonzalez                           |     |
| Raman scattering from boron-substituted carbon films .....                                                                                  | 144 |
| J. G. Naeini, B. M. Way, J. R. Dahn, and J. C. Irwin                                                                                        |     |
| Irreversible structural changes in vitreous $\text{B}_2\text{O}_3$ under pressure .....                                                     | 152 |
| M. Grimsditch, A. Polian, and Adrian C. Wright                                                                                              |     |
| Polarized x-ray-absorption spectroscopy of the uranyl ion: Comparison of experiment and theory .....                                        | 156 |
| E. A. Hudson, P. G. Allen, L. J. Terminello, M. A. Denecke, and T. Reich                                                                    |     |
