## BRIEF REPORTS

### Electronic structure and strongly correlated systems

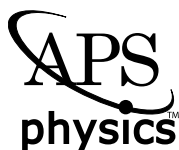

|                                                                                                                                                                           |        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Realizing a negative index metamaterial by controlling hybridization of trapped modes ( <i>4 pages</i> ) . . . . .                                                        | 033101 |
| Redha Abdeddaim, Abdelwaheb Ourir, and Julien de Rosny                                                                                                                    |        |
| Lifshitz transitions in a heavy Fermi liquid driven by short-range antiferromagnetic correlations in the two-dimensional Kondo lattice model ( <i>4 pages</i> ) . . . . . | 033102 |
| Guang-Ming Zhang, Yue-Hua Su, and Lu Yu                                                                                                                                   |        |
| Electronic structure of lithium amide ( <i>4 pages</i> ) . . . . .                                                                                                        | 033103 |
| N. Kamakura, Y. Takeda, Y. Saitoh, H. Yamagami, M. Tsubota, B. Paik, T. Ichikawa, Y. Kojima, T. Muro, Y. Kato, and T. Kinoshita                                           |        |
| Variational cluster approximation study of the one-dimensional Holstein-Hubbard model at half filling ( <i>4 pages</i> ) . . . . .                                        | 033104 |
| Alexandre Payeur and David Sénéchal                                                                                                                                       |        |

### Semiconductors I: bulk

|                                                                                   |        |
|-----------------------------------------------------------------------------------|--------|
| Antimony bonding in Ge-Sb-Te phase change materials ( <i>4 pages</i> ) . . . . .  | 033201 |
| David C. Bobela, P. Craig Taylor, Phillip Kuhns, Arneil Reyes, and Arthur Edwards |        |

### Semiconductors II: surfaces, interfaces, microstructures, and related topics

|                                                                                                                                                  |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Single-shot initialization of electron spin in a quantum dot using a short optical pulse ( <i>4 pages</i> ) . . . . .                            | 033301 |
| Vivien Loo, Loïc Lanco, Olivier Krebs, Pascale Senellart, and Paul Voisin                                                                        |        |
| Temperature- and exposure-dependent study of the Ge(001)c(8 × 2)-Au surface ( <i>4 pages</i> ) . . . . .                                         | 033302 |
| M. C. Gallagher, S. Melnik, and D. Mahler                                                                                                        |        |
| Polaron contributions to the biexciton binding energies in self-assembled quantum dots ( <i>4 pages</i> ) . . . . .                              | 033303 |
| Paweł Machnikowski                                                                                                                               |        |
| Water adsorption on hydrogen-passivated silicon nanowires from density functional theory with dispersion correction ( <i>4 pages</i> ) . . . . . | 033304 |
| Abraham Hmiel and Yongqiang Xue                                                                                                                  |        |

| Boundary effects on the local density of states of one-dimensional Mott insulators and charge density wave states (21 pages) .....<br>Dirk Schuricht, Fabian H. L. Essler, Akbar Jaefari, and Eduardo Fradkin                                                       | 035111 |
| Electronic structure study of ion-implanted Si quantum dots in a SiO <sub>2</sub> matrix: Analysis of quantum confinement theories (11 pages) .....<br>E. G. Barbagiovanni, L. V. Goncharova, and P. J. Simpson                                                     | 035112 |
| Correlated Dirac fermions on the honeycomb lattice studied within cluster dynamical mean field theory (7 pages) .....<br>Ansgar Liebsch                                                                                                                             | 035113 |
| Multiorbital simplified parquet equations for strongly correlated electrons (13 pages) .....<br>Pavel Augustinský and Václav Janiš                                                                                                                                  | 035114 |
|  Conservation laws, integrability, and transport in one-dimensional quantum systems (20 pages) .....<br>J. Sirker, R. G. Pereira, and I. Affleck                                    | 035115 |
| Tin dioxide from first principles: Quasiparticle electronic states and optical properties (9 pages) .....<br>A. Schleife, J. B. Varley, F. Fuchs, C. Rödl, F. Bechstedt, P. Rinke, A. Janotti, and C. G. Van de Walle                                               | 035116 |
| Electron correlation decides the stability of cubic versus hexagonal boron nitride (8 pages) .....<br>Migen Halo, Cesare Pisani, Lorenzo Maschio, Silvia Casassa, Martin Schütz, and Denis Usvyat                                                                   | 035117 |
| Multidomain decomposition approach to time-dependent density functional calculations (9 pages) .....<br>Vladimir A. Goncharov and Kálmán Varga                                                                                                                      | 035118 |
| Density-based mixing parameter for hybrid functionals (5 pages) .....<br>Miguel A. L. Marques, Julien Vidal, Micael J. T. Oliveira, Lucia Reining, and Silvana Botti                                                                                                | 035119 |
| Strong-coupling approach to the Mott-Hubbard insulator on a Bethe lattice in dynamical mean-field theory (12 pages) .....<br>Daniel Ruhl and Florian Gebhard                                                                                                        | 035120 |
| Controlling the electronic structure of Co <sub>1-x</sub> Fe <sub>2+x</sub> O <sub>4</sub> thin films through iron doping (10 pages) .....<br>J. A. Moyer, C. A. F. Vaz, E. Negusse, D. A. Arena, and V. E. Henrich                                                 | 035121 |
| Millikelvin de Haas-van Alphen and magnetotransport studies of graphite (9 pages) .....<br>S. B. Hubbard, T. J. Kershaw, A. Usher, A. K. Savchenko, and A. Shytov                                                                                                   | 035122 |
| Critical particle-hole composites at twice the Fermi wave vector in a U(1) spin liquid with a Fermi surface (11 pages) .....<br>Ki-Seok Kim                                                                                                                         | 035123 |
| Adiabatic refocusing of nuclear spins in Tm <sup>3+</sup> :YAG (7 pages) .....<br>R. Lauro, T. Chanelière, and J.-L. Le Gouët                                                                                                                                       | 035124 |
