In Table II, the calculated bond length for the Ge-C bond in the 131 atom cluster is quoted as 1.046; this should read 2.046. In fact, this bond length is given correctly in both the text and Fig. 6, but unfortunately, was mistyped in Table II. This correction does not affect the conclusions.

The correct version of Fig. 5 appears below.

FIG. 5. $^1$H nuclear spin-lattice relaxation rate, $T_1^{-1}$, plotted as a function of temperature for two different Fe6 rings. The measuring resonance frequency is 14 MHz in both cases.
