THIRD SERIES, VOLUME 58, NUMBER 4

OCTOBER 1998

## Nuclear Structure

|                                                                                                                                                                                                                                      |      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Neutron $h_{11/2}$ band structures of $^{109,111}\text{Pd}$ observed in heavy-ion induced fission .....                                                                                                                              | 1966 |
| T. Kutsarova, A. Minkova, M.-G. Porquet, I. Deloncle, E. Gueorguieva, F. Azaiez, S. Bouneau,<br>C. Bourgeois, J. Duprat, B. J. P. Gall, C. Gautherin, F. Hoellinger, R. Lucas, N. Schulz, H. Sergolle,<br>Ts. Venkova, and A. Wilson |      |
| Meson-exchange enhancement in first-forbidden $\beta$ transitions: The case of $^{50}\text{K}$ and $^{38}\text{Ca}$ .....                                                                                                            | 1970 |
| P. Baumann, M. Bounajma, F. Didierjean, A. Huck, A. Knipper, M. Ramdhane, G. Walter, G. Marguier,<br>C. Richard-Serre, and B. A. Brown                                                                                               |      |
| Low-lying levels in Cu and Zn isotopes .....                                                                                                                                                                                         | 1980 |
| K. P. Singh, D. C. Tayal, and H. S. Hans                                                                                                                                                                                             |      |
| Nuclear orientation of $^{160}\text{Ho}^{g+m}\text{Gd}$ : Sign change of $E2/M1$ mixing ratios in $\Delta K=2$ transitions of $^{160}\text{Dy}$ .....                                                                                | 1986 |
| T. I. Kracíková, M. Finger, M. Krmar, K. Kumar, A. Janata, N. A. Lebedev, V. N. Pavlov, and<br>E. Šimečková                                                                                                                          |      |
| High-spin excitations in Ru nuclei near $N=60$ .....                                                                                                                                                                                 | 1997 |
| N. Fotiades, J. A. Cizewski, D. P. McNabb, K. Y. Ding, D. E. Archer, J. A. Becker, L. A. Bernstein,<br>K. Hauschild, W. Younes, R. M. Clark, P. Fallon, I. Y. Lee, A. O. Macchiavelli, and R. W. MacLeod                             |      |
| Rotational bands in $^{133}\text{Nd}$ .....                                                                                                                                                                                          | 2002 |
| D. Bazzacco, F. Brandolini, G. Falconi, S. Lunardi, N. H. Medina, P. Pavan, C. Rossi Alvarez,<br>G. de Angelis, D. De Acuna, M. De Poli, D. R. Napoli, J. Rico, D. Bucurescu, M. Ionescu-Bujor, and<br>C. A. Ur                      |      |
| Scalar and vector decomposition of the nucleon self-energy in the relativistic Brueckner approach .....                                                                                                                              | 2022 |
| C. Fuchs, T. Waindzoeh, Amand Faessler, and D. S. Kosov                                                                                                                                                                              |      |
| Shell model study of the neutron rich isotopes from oxygen to silicon .....                                                                                                                                                          | 2033 |
| E. Caurier, F. Nowacki, A. Poves, and J. Retamosa                                                                                                                                                                                    |      |
| Backbending and breaking of axial symmetry in the yrast bands of $^{114-130}\text{Xe}$ isotopes .....                                                                                                                                | 2041 |
| S. P. Sarswat, Arun Bharti, and S. K. Khosa                                                                                                                                                                                          |      |
| Systematic study of exotic clustering in even-even actinide nuclei .....                                                                                                                                                             | 2049 |
| B. Buck, A. C. Merchant, and S. M. Perez                                                                                                                                                                                             |      |
| Electromagnetic transitions of the $K=1$ band in the SU(3) limit of the neutron-proton interacting boson model ...                                                                                                                   | 2061 |
| J. H. Lee                                                                                                                                                                                                                            |      |
| Monopole strength and decay out of superdeformed bands in the $A=190$ mass region from theories beyond the<br>mean field .....                                                                                                       | 2068 |
| H. Dancer, P. Bonche, H. Flocard, P.-H. Heenen, J. Meyer, and M. Meyer                                                                                                                                                               |      |
| Microscopic description of $\alpha$ decay from superdeformed nuclei .....                                                                                                                                                            | 2073 |
| D. S. Delion and R. J. Liotta                                                                                                                                                                                                        |      |
| Identical bands and incremental alignments in normal deformed nuclei .....                                                                                                                                                           | 2081 |
| Caiwan Shen and Y. S. Chen                                                                                                                                                                                                           |      |
| Solution of relativistic Hartree-Bogoliubov equations in configurational representation: Spherical neutron halo<br>nuclei .....                                                                                                      | 2086 |
| M. Stoitsov, P. Ring, D. Vretenar, and G. A. Lalazissis                                                                                                                                                                              |      |
| New discrete basis for nuclear structure studies .....                                                                                                                                                                               | 2092 |
| M. V. Stoitsov, W. Nazarewicz, and S. Pittel                                                                                                                                                                                         |      |
| Shell-model plus Hartree-Fock calculations for the neutron-rich Ca isotopes .....                                                                                                                                                    | 2099 |
| B. A. Brown and W. A. Richter                                                                                                                                                                                                        |      |
| Spectral statistics of calcium isotopes from realistic shell-model calculations .....                                                                                                                                                | 2108 |
| J. M. G. Gómez, V. R. Manfredi, L. Salasnich, and E. Caurier                                                                                                                                                                         |      |
| Nucleon momentum and density distributions in $^4\text{He}$ considering internal rotation .....                                                                                                                                      | 2115 |
| G. S. Anagnostatos, A. N. Antonov, P. Ginis, J. Giapitzakis, M. K. Gaidarov, and A. Vassiliou                                                                                                                                        |      |
| Role of the tensor force in nuclear matter saturation .....                                                                                                                                                                          | 2120 |
| Manoj K. Banerjee and John A. Tjon                                                                                                                                                                                                   |      |
