DOI: 10.1103/2rqb-qvfd

As the author of the original publication, I retract this paper due to an error in calculating the astrophysical S factors in the associated unit, keV b. Specifically, the numerical code used the unit MeV^{-1}. The corrected values scale the initial estimations by a factor of 100, resulting in a two-order-of-magnitude discrepancy with the experimental data where I fixed a value of the parameter $y^{(0)}$ in the reaction amplitudes by using a close value of the asymptotic normalization coefficient of the ground state of ^{16}O, $|C_b|_{01} = 44.5(3)\ \mathrm{fm}^{-1/2}$, to that employed in an R-matrix analysis, $|C_b|_{01} = 58\ \mathrm{fm}^{-1/2}$. The results and interpretations from the original paper are therefore no longer tenable.

I regret any inconvenience that this retraction may cause.
