This paper dealt primarily with a measurement of energies and widths of these two states. I briefly mentioned that Peters et al. [1] observed one or both of these states. This latter point had already been addressed in a Comment [2] and a Reply [3]—two references that were inadvertently omitted from the paper. I am grateful to Dr. Peters for noticing this omission. The conclusions of the paper are not affected by the omission of these references. In another paper [4], whose citation was also inexplicably omitted, I have discussed a possible problem with neutron decay-in-flight experiments in which the observed total widths are significantly greater than expected from the stated resolutions.
