

*The Table of Contents is a total listing of Parts A and B.*

*Part A consists of articles 021301–024014, and Part B articles 024015–029903(E)*

### PART A

#### RAPID COMMUNICATIONS

- Bias and scatter in the Hubble diagram from cosmological large-scale structure (6 pages) ..... 021301(R)  
Julian Adamek, Chris Clarkson, Louis Coates, Ruth Durrer, and Martin Kunz
- Determining the fraction of cosmic-ray protons at ultrahigh energies with cosmogenic neutrinos (5 pages) ..... 021302(R)  
Arjen van Vliet, Rafael Alves Batista, and Jörg R. Hörandel
- CMB constraints on the stochastic gravitational-wave background at Mpc scales (7 pages) ..... 021303(R)  
Toshiya Namikawa, Shohei Saga, Daisuke Yamauchi, and Atsushi Taruya
-  Frequency domain model of  $f$ -mode dynamic tides in gravitational waveforms from compact binary inspirals (7 pages) ..... 021501(R)  
Patricia Schmidt and Tanja Hinderer
- Holographic dual of the  $\Omega$ -background (5 pages) ..... 021901(R)  
Nikolay Bobev, Friðrik Freyr Gautason, and Kiril Hristov

#### ARTICLES

- Dark matter search results from the complete exposure of the PICO-60  $C_3F_8$  bubble chamber (9 pages) ..... 022001  
C. Amole *et al.* (PICO Collaboration)
- Improved measurements of the  $\beta$ -decay response of liquid xenon with the LUX detector (10 pages) ..... 022002  
D. S. Akerib *et al.* (LUX Collaboration)
- Gravitational-wave parameter estimation with gaps in LISA: A Bayesian data augmentation method (18 pages) ..... 022003  
Quentin Baghi, James Ira Thorpe, Jacob Slutsky, John Baker, Tito Dal Canton, Natalia Korsakova, and Nikos Karnesis
- Search for dark matter with a 231-day exposure of liquid argon using DEAP-3600 at SNOLAB (25 pages) ..... 022004  
R. Ajaj *et al.* (DEAP Collaboration)
- Galactic Center gas clouds and novel bounds on ultralight dark photon, vector portal, strongly interacting, composite, and super-heavy dark matter (17 pages) ..... 023001  
Amit Bhoonah, Joseph Bramante, Fatemeh Elahi, and Sarah Schon
- Observationally inferred dark matter phase-space distribution and direct detection experiments (13 pages) ..... 023002  
Sayan Mandal, Subhabrata Majumdar, Vikram Renteria, and Ritoban Basu Thakur
- Pulsar timing probes of primordial black holes and subhalos (18 pages) ..... 023003  
Jeff A. Dror, Harikrishnan Ramani, Tanner Trickle, and Kathryn M. Zurek
- Visualizing invisible dark matter annihilation with the CMB and matter power spectrum (7 pages) ..... 023004  
Yanou Cui and Ran Huo
- First 100 ms of a long-lived magnetized neutron star formed in a binary neutron star merger (15 pages) ..... 023005  
Riccardo Ciolfi, Wolfgang Kastaun, Jay Vijay Kalinani, and Bruno Giacomazzo

|                                                                                                                                                                                            |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Generalized application of the Viterbi algorithm to searches for continuous gravitational-wave signals (15 pages) .....                                                                    | 023006 |
| Joe Bayley, Chris Messenger, and Graham Woan                                                                                                                                               |        |
| Highly spinning and aligned binary black hole merger in the Advanced LIGO first observing run (8 pages) .....                                                                              | 023007 |
| Barak Zackay, Tejaswi Venumadhav, Liang Dai, Javier Roulet, and Matias Zaldarriaga                                                                                                         |        |
| Full transport model of GW170817-like disk produces a blue kilonova (8 pages) .....                                                                                                        | 023008 |
| Jonah M. Miller, Benjamin R. Ryan, Joshua C. Dolence, Adam Burrows, Christopher J. Fontes, Christopher L. Fryer, Oleg Korobkin, Jonas Lippuner, Matthew R. Mumpower, and Ryan T. Wollaeger |        |
| Rate of dark photon emission from electron positron annihilation in massive stars (7 pages) .....                                                                                          | 023009 |
| Ermal Rrapaj, Andre Sieverding, and Yong-Zhong Qian                                                                                                                                        |        |
| Systematic differences due to high energy hadronic interaction models in air shower simulations in the 100 GeV-100 TeV range (8 pages) .....                                               | 023010 |
| R. D. Parsons and H. Schoorlemmer                                                                                                                                                          |        |
| New search pipeline for compact binary mergers: Results for binary black holes in the first observing run of Advanced LIGO (15 pages) .....                                                | 023011 |
| Tejaswi Venumadhav, Barak Zackay, Javier Roulet, Liang Dai, and Matias Zaldarriaga                                                                                                         |        |
| Future prospects for constraining nuclear matter parameters with gravitational waves (16 pages) .....                                                                                      | 023012 |
| Zack Carson, Andrew W. Steiner, and Kent Yagi                                                                                                                                              |        |
| Beyond subhalos: Probing the collective effect of the Universe's small-scale structure with gravitational lensing (30 pages) .....                                                         | 023013 |
| Francis-Yan Cyr-Racine, Charles R. Keeton, and Leonidas A. Moustakas                                                                                                                       |        |
| Exploring a cosmic-ray origin of the multiwavelength emission in M31 (16 pages) .....                                                                                                      | 023014 |
| Alex McDaniel, Tesla Jeltema, and Stefano Profumo                                                                                                                                          |        |
| Constraint on the maximum mass of neutron stars using GW170817 event (15 pages) .....                                                                                                      | 023015 |
| Masaru Shibata, Enping Zhou, Kenta Kiuchi, and Sho Fujibayashi                                                                                                                             |        |
| Nonlinear flavor development of a two-dimensional neutrino gas (10 pages) .....                                                                                                            | 023016 |
| Joshua D. Martin, Sajad Abbar, and Huaiyu Duan                                                                                                                                             |        |
| Constraining the kinetically dominated universe (15 pages) .....                                                                                                                           | 023501 |
| L. T. Hergt, W. J. Handley, M. P. Hobson, and A. N. Lasenby                                                                                                                                |        |
| Case for kinetically dominated initial conditions for inflation (7 pages) .....                                                                                                            | 023502 |
| L. T. Hergt, W. J. Handley, M. P. Hobson, and A. N. Lasenby                                                                                                                                |        |
| Brans-Dicke scalar field cosmological model in Lyra's geometry (13 pages) .....                                                                                                            | 023503 |
| Dinesh Chandra Maurya and Rashid Zia                                                                                                                                                       |        |
| Beyond BAO: Improving cosmological constraints from BOSS data with measurement of the void-galaxy cross-correlation (22 pages) .....                                                       | 023504 |
| Seshadri Nadathur, Paul M. Carter, Will J. Percival, Hans A. Winther, and Julian E. Bautista                                                                                               |        |
| Is the $H_0$ tension suggesting a fourth neutrino generation? (7 pages) .....                                                                                                              | 023505 |
| S. Carneiro, P. C. de Holanda, C. Pigozzo, and F. Sobreira                                                                                                                                 |        |
| WIMPs and stellar-mass primordial black holes are incompatible (11 pages) .....                                                                                                            | 023506 |
| Julian Adamek, Christian T. Byrnes, Mateja Gosenca, and Shaun Hotchkiss                                                                                                                    |        |
| Future CMB constraints on cosmic birefringence and implications for fundamental physics (14 pages) .....                                                                                   | 023507 |
| Levon Pogorian, Meir Shimon, Matthew Mewes, and Brian Keating                                                                                                                              |        |
| Distinguishing standard and modified gravity cosmologies with machine learning (11 pages) .....                                                                                            | 023508 |
| Austin Peel, Florian Lalande, Jean-Luc Starck, Valeria Pettorino, Julian Merten, Carlo Giocoli, Massimo Meneghetti, and Marco Baldi                                                        |        |
| Bayesian delensing of CMB temperature and polarization (19 pages) .....                                                                                                                    | 023509 |
| Marius Millea, Ethan Anderes, and Benjamin D. Wandelt                                                                                                                                      |        |
| New inflation in the landscape and typicality of the observed cosmic perturbation (19 pages) .....                                                                                         | 023510 |
| Chien-I Chiang and Keisuke Harigaya                                                                                                                                                        |        |
| Reconstruction of general relativistic cosmological solutions in modified gravity theories (12 pages) .....                                                                                | 023511 |
| I. V. Fomin and S. V. Chervon                                                                                                                                                              |        |
| Quantifying dimensionality: Bayesian cosmological model complexities (14 pages) .....                                                                                                      | 023512 |
| Will Handley and Pablo Lemos                                                                                                                                                               |        |

PHYSICAL REVIEW D

THIRD SERIES, VOLUME 100, NUMBER 2

D15 JULY 2019

|                                                                                    |        |
|------------------------------------------------------------------------------------|--------|
| Nonlocal generalization of Galilean theories and gravity ( <i>15 pages</i> ) ..... | 026019 |
| Luca Buoninfante, Gaetano Lambiase, and Masahide Yamaguchi                         |        |

## ERRATA

|                                                                                                                                                                                                   |        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Erratum: F-theory and the classification of little strings [Phys. Rev. D <b>93</b> , 086002 (2016)] ( <i>1 pages</i> ) .....                                                                      | 029901 |
| Lakshya Bhardwaj, Michele Del Zotto, Jonathan J. Heckman, David R. Morrison,<br>Tom Rudelius, and Cumrun Vafa                                                                                     |        |
| Erratum: Distinguishing a rotating Kiselev black hole from a naked singularity using the spin precession of a test gyroscope<br>[Phys. Rev. D <b>98</b> , 024015 (2018)] ( <i>1 pages</i> ) ..... | 029902 |
| Muhammad Rizwan, Mubasher Jamil, and Anzhong Wang                                                                                                                                                 |        |
| Erratum: Spontaneous growth of spinor fields in gravity [Phys. Rev. D <b>98</b> , 044011 (2018)] ( <i>2 pages</i> ) .....                                                                         | 029903 |
| Fethi M. Ramazanoğlu                                                                                                                                                                              |        |

This paper was highlighted in the APS publication *Physics* (physics.aps.org).

By suggesting a few manuscripts each week, we hope to promote reading across fields. Please see our Announcement Phys. Rev. D **90**, 020001 (2014).
