

*The Table of Contents is a total listing of Parts A and B.*

*Part A consists of articles 081301–084017, and Part B articles 084018–089902(E)*

### PART A

#### RAPID COMMUNICATIONS

|                                                                                                                                                         |           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| Unified view of anisotropies in the astrophysical gravitational-wave background (6 pages) .....                                                         | 081301(R) |
| Cyril Pitrou, Giulia Cusin, and Jean-Philippe Uzan                                                                                                      |           |
| Gravitational atoms: General framework for the construction of multistate axially symmetric solutions of the Schrödinger-Poisson system (6 pages) ..... | 081302(R) |
| F. S. Guzmán and L. Arturo Ureña-López                                                                                                                  |           |
| Evolution of the electric field along null rays for arbitrary observers and spacetimes (6 pages) .....                                                  | 081501(R) |
| Lucas T. Santana, João C. Lobato, Isabela S. Matos, Maurício O. Calvão, and Ribamar R. R. Reis                                                          |           |
| Surrogate model for gravitational wave signals from comparable and large-mass-ratio black hole binaries (8 pages) .....                                 | 081502(R) |
| Nur E. M. Rifat, Scott E. Field, Gaurav Khanna, and Vijay Varma                                                                                         |           |
| Confining strings, infinite statistics, and integrability (7 pages) .....                                                                               | 081901(R) |
| John C. Donahue and Sergei Dubovsky                                                                                                                     |           |

#### ARTICLES

|                                                                                                                                                                      |        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Towards a real-time fully-coherent all-sky search for gravitational waves from compact binary coalescences using particle swarm optimization (14 pages) .....        | 082001 |
| Marc E. Normandin and Soumya D. Mohanty                                                                                                                              |        |
| Implications of the quantum noise target for the Einstein Telescope infrastructure design (8 pages) .....                                                            | 082002 |
| Philip Jones, Teng Zhang, Haixing Miao, and Andreas Freise                                                                                                           |        |
| Monte Carlo control loops for cosmic shear cosmology with DES Year 1 data (29 pages) .....                                                                           | 082003 |
| T. Kacprzak <i>et al.</i> (The DES Collaboration)                                                                                                                    |        |
| Directed search for continuous gravitational-wave signals from the Galactic Center in the Advanced LIGO second observing run (11 pages) .....                        | 082004 |
| Ornella J. Piccinni, P. Astone, S. D'Antonio, S. Frasca, G. Intini, I. La Rosa, P. Leaci, S. Mastrogiorganni, A. Miller, and C. Palomba                              |        |
| Exploring the effective tidal deformability of neutron stars (13 pages) .....                                                                                        | 083001 |
| N. Andersson and P. Pnigouras                                                                                                                                        |        |
| Precursor flares of short gamma-ray bursts from crust yielding due to tidal resonances in coalescing binaries of rotating, magnetized neutron stars (16 pages) ..... | 083002 |
| Arthur G. Suvorov and Kostas D. Kokkotas                                                                                                                             |        |
| Influence of a magnetic field on beta-processes in supernova matter (11 pages) .....                                                                                 | 083003 |
| Alexandra Dobrynina and Igor Ognev                                                                                                                                   |        |

PHYSICAL REVIEW D

THIRD SERIES, VOLUME 101, NUMBER 8

D15 APRIL 2020

|                                                                                                                                                        |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Constraints on the intergalactic magnetic field from $\gamma$ -ray observations of GRB 190114C (6 pages) .....                                         | 083004 |
| Ze-Rui Wang, Shao-Qiang Xi, Ruo-Yu Liu, Rui Xue, and Xiang-Yu Wang                                                                                     |        |
| Askaryan radiation from neutrino-induced showers in ice (16 pages) .....                                                                               | 083005 |
| Jaime Alvarez-Muñiz, P. M. Hansen, Andrés Romero-Wolf, and Enrique Zas                                                                                 |        |
| Ranking candidate signals with machine learning in low-latency searches for gravitational waves from compact binary mergers (11 pages) .....           | 083006 |
| Kyungmin Kim, Tjonnje G. F. Li, Rico K. L. Lo, Surabhi Sachdev, and Robin S. H. Yuen                                                                   |        |
| Constraints on ultralight axions from compact binary systems (9 pages) .....                                                                           | 083007 |
| Tanmay Kumar Poddar, Subhendra Mohanty, and Soumya Jana                                                                                                |        |
| Merger history of primordial black-hole binaries (8 pages) .....                                                                                       | 083008 |
| You Wu                                                                                                                                                 |        |
| Generation of strong magnetic fields in a nascent neutron star accounting for the chiral magnetic effect (12 pages) ....                               | 083009 |
| Maxim Dvornikov, V. B. Semikoz, and D. D. Sokoloff                                                                                                     |        |
| Screening corrections to electron capture rates and resulting constraints on primordial magnetic fields (9 pages) .....                                | 083010 |
| Yudong Luo, Michael A. Famiano, Toshitaka Kajino, Motohiko Kusakabe, and A. Baha Balantekin                                                            |        |
| Cosmic-ray interactions with the Sun using the FLUKA code (13 pages) .....                                                                             | 083011 |
| M. N. Mazziotta, P. De La Torre Luque, L. Di Venere, A. Fassò, A. Ferrari, F. Loparco, P. R. Sala, and D. Serini                                       |        |
| Ghostly galaxies as solitons of Bose-Einstein dark matter (8 pages) .....                                                                              | 083012 |
| Tom Broadhurst, Ivan De Martino, Hoang Nhan Luu, George F. Smoot, and S.-H. Henry Tye                                                                  |        |
| Gravitational microlensing by dark matter in extended structures (11 pages) .....                                                                      | 083013 |
| Djuna Croon, David McKeen, and Nirmal Raj                                                                                                              |        |
| Large-misalignment mechanism for the formation of compact axion structures: Signatures from the QCD axion to fuzzy dark matter (49 pages) .....        | 083014 |
| Asimina Arvanitaki, Savas Dimopoulos, Marios Galanis, Luis Lehner, Jedidiah O. Thompson, and Ken Van Tilburg                                           |        |
| First survey of spinning eccentric black hole mergers: Numerical relativity simulations, hybrid waveforms, and parameter estimation (21 pages) .....   | 083015 |
| Antoni Ramos-Buades, Sascha Husa, Geraint Pratten, Héctor Estellés, Cecilio García-Quirós, Maite Mateu-Lucena, Marta Colleoni, and Rafel Jaume         |        |
| Probing gaseous galactic halos through the rotational kinematic Sunyaev-Zeldovich effect (18 pages) .....                                              | 083016 |
| José Manuel Zorrilla Matilla and Zoltán Haiman                                                                                                         |        |
| Impact of transport modeling on the $^{60}\text{Fe}$ abundance inside Galactic cosmic ray sources (12 pages) .....                                     | 083017 |
| Giovanni Morlino and Elena Amato                                                                                                                       |        |
| Probing the sea of galactic cosmic rays with Fermi-LAT (13 pages) .....                                                                                | 083018 |
| Felix Aharonian, Giada Peron, Ruizhi Yang, Sabrina Casanova, and Roberta Zanin                                                                         |        |
| Gravitational collider physics (37 pages) .....                                                                                                        | 083019 |
| Daniel Baumann, Horng Sheng Chia, Rafael A. Porto, and John Stout                                                                                      |        |
| DAMA/LIBRA annual modulation and axion quark nugget dark matter model (20 pages) .....                                                                 | 083020 |
| Ariel Zhitnitsky                                                                                                                                       |        |
| Consistent perturbative modeling of pseudo-Newtonian core-collapse supernova simulations (11 pages) .....                                              | 083021 |
| John Ryan Westernacher-Schneider                                                                                                                       |        |
| Primordial rotating black holes (7 pages) .....                                                                                                        | 083022 |
| J. A. de Freitas Pacheco and Joseph Silk                                                                                                               |        |
| Directed searches for continuous gravitational waves from twelve supernova remnants in data from Advanced LIGO's second observing run (10 pages) ..... | 083023 |
| Lee Lindblom and Benjamin J. Owen                                                                                                                      |        |
| Cosmogenic neutrino fluxes under the effect of active-sterile secret interactions (11 pages) .....                                                     | 083024 |
| Damiano Fiorillo, Gennaro Miele, Stefano Morisi, and Ninetta Saviano                                                                                   |        |
| Muon deficit in air shower simulations estimated from AGASA muon measurements (11 pages) .....                                                         | 083025 |
| F. Gesualdi, A. D. Supanitsky, and A. Etchegoyen                                                                                                       |        |
| Forecasts for detecting the gravitational-wave memory effect with Advanced LIGO and Virgo (20 pages) .....                                             | 083026 |
| Oliver M. Boersma, David A. Nichols, and Patricia Schmidt                                                                                              |        |

(Continued)

This paper was highlighted in the APS publication *Physics* (physics.aps.org).

By suggesting a few manuscripts each week, we hope to promote reading across fields. Please see our Announcement Phys. Rev. D **90**, 020001 (2014).

This paper was highlighted in the APS publication *Physics* ([physics.aps.org](http://physics.aps.org)).

By suggesting a few manuscripts each week, we hope to promote reading across fields. Please see our Announcement Phys. Rev. D **90**, 020001 (2014).
