THIRD SERIES, VOLUME 103, NUMBER 4

CONTENTS

D15 FEBRUARY 2021

*The Table of Contents is a total listing of Parts A and B.*

*Part A consists of articles 041301–044016, and Part B articles 044017–048302(R)*

|                                                                                                                       |         |
|-----------------------------------------------------------------------------------------------------------------------|---------|
| Curvature tension: Evidence for a closed universe (7 pages) .....                                                     | L041301 |
| Will Handley                                                                                                          |         |
| NANOGrav signal from magnetohydrodynamic turbulence at the QCD phase transition in the early Universe (6 pages) ..... | L041302 |
| Andrii Neronov, Alberto Roper Pol, Chiara Caprini, and Dmitri Semikoz                                                 |         |
| New early dark energy (7 pages) .....                                                                                 | L041303 |
| Florian Niedermann and Martin S. Sloth                                                                                |         |
| Alternative to collective coordinates (6 pages) .....                                                                 | L041701 |
| Jarah Evslin and Hengyuan Guo                                                                                         |         |

### ARTICLES

|                                                                                                                                                                               |        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| How can amorphous silicon improve current gravitational-wave detectors? (9 pages) .....                                                                                       | 042001 |
| Jessica Steinlechner and Iain W. Martin                                                                                                                                       |        |
| BICEP/Keck XII: Constraints on axionlike polarization oscillations in the cosmic microwave background (23 pages) .....                                                        | 042002 |
| P. A. R. Ade <i>et al.</i> (BICEP/Keck Collaboration)                                                                                                                         |        |
| A coincidence null test for Poisson-distributed events (14 pages) .....                                                                                                       | 042003 |
| Reed Essick, Geoffrey Mo, and Erik Katsavounidis                                                                                                                              |        |
| Constraining unmodeled physics with compact binary mergers from GWTC-1 (13 pages) .....                                                                                       | 042004 |
| Bruce Edelman, F. J. Rivera-Paleo, J. D. Merritt, Ben Farr, Zoheyr Doctor, Jeandrew Brink,<br>Will M. Farr, Jonathan Gair, Joey Shapiro Key, Jess McIver, and Alex B. Nielsen |        |
| Measurements of the time-dependent cosmic-ray Sun shadow with seven years of IceCube data: Comparison with the Solar<br>cycle and magnetic field models (18 pages) .....      | 042005 |
| M. G. Aartsen <i>et al.</i> (IceCube Collaboration)                                                                                                                           |        |
| Statistical inference approach to time-delay interferometry for gravitational-wave detection (12 pages) .....                                                                 | 042006 |
| Quentin Baghi, James Ira Thorpe, Jacob Slutsky, and John Baker                                                                                                                |        |
| Eclipse avoidance in TianQin orbit selection (7 pages) .....                                                                                                                  | 042007 |
| Bobing Ye, Xuefeng Zhang, Yanwei Ding, and Yunhe Meng                                                                                                                         |        |
| Higher-order Hermite-Gauss modes for gravitational waves detection (17 pages) .....                                                                                           | 042008 |
| Stefan Ast, Sibilla Di Pace, Jacques Millo, Mikhaël Pichot, Margherita Turconi,<br>Nelson Christensen, and Walid Chaibi                                                       |        |
| Insights into searches for anisotropies in the nanohertz gravitational-wave background (22 pages) .....                                                                       | 042009 |
| Yacine Ali-Haïmoud, Tristan L. Smith, and Chiara M. F. Mingarelli                                                                                                             |        |

This paper was highlighted in the APS publication *Physics* (physics.aps.org).

By suggesting a few manuscripts each week, we hope to promote reading across fields. Please see our Announcement Phys. Rev. D **90**, 020001 (2014).

|                                                                                                                                                                     |        |

| Properties of liquid argon scintillation light emission (12 pages) .....                                                                                            | 043001 |
| Ettore Segreto                                                                                                                                                      |        |
| startrack predictions of the stochastic gravitational-wave background from compact binary mergers (13 pages) .....                                                  | 043002 |
| C. P  rigois, C. Belczynski, T. Bulik, and T. Regimbau                                                                                                              |        |
| Impact of binary interactions on the diffuse supernova neutrino background (13 pages) .....                                                                         | 043003 |
| Shunsaku Horiuchi, Tomoya Kinugawa, Tomoya Takiwaki, Koh Takahashi, and Kei Kotake                                                                                  |        |
| Electrically nonneutral ground states of stars (27 pages) .....                                                                                                     | 043004 |
| Parker Hund and Michael K.-H. Kiessling                                                                                                                             |        |
| Accurate calculation of gravitational wave memory (8 pages) .....                                                                                                   | 043005 |
| Xiaolin Liu, Xiaokai He, and Zhoujian Cao                                                                                                                           |        |
| Inference of neutrino flavor evolution through data assimilation and neural differential equations (14 pages) .....                                                 | 043006 |
| Ermal Rrapaj, Amol V. Patwardhan, Eve Armstrong, and George M. Fuller                                                                                               |        |
| Properties of the remnant disk and the dynamical ejecta produced in low-mass black hole-neutron star mergers (16 pages) .....                                       | 043007 |
| Kota Hayashi, Kyohei Kawaguchi, Kenta Kiuchi, Koutarou Kyutoku, and Masaru Shibata                                                                                  |        |
| Gravitational lensing by hairy black holes in Einstein-scalar-Gauss-Bonnet theories (14 pages) .....                                                                | 043008 |
| Yuan-Xing Gao and Yi Xie                                                                                                                                            |        |
| Dark matter admixed neutron stars (12 pages) .....                                                                                                                  | 043009 |
| Ben Kain                                                                                                                                                            |        |
| Constraining primordial black holes as dark matter at JUNO (9 pages) .....                                                                                          | 043010 |
| Sai Wang, Dong-Mei Xia, Xukun Zhang, Shun Zhou, and Zhe Chang                                                                                                       |        |
| High speed source localization in searches for gravitational waves from compact object collisions (9 pages) .....                                                   | 043011 |
| Takuya Tsutsui, Kipp Cannon, and Leo Tsukada                                                                                                                        |        |
| Constraints from compact star observations on non-Newtonian gravity in strange stars based on a density dependent quark mass model (8 pages) .....                  | 043012 |
| Shu-Hua Yang, Chun-Mei Pi, Xiao-Ping Zheng, and Fridolin Weber                                                                                                      |        |
| Gravitational waves from disks around spinning black holes: Simulations in full general relativity (15 pages) .....                                                 | 043013 |
| Erik Wessel, Vasileios Paschalidis, Antonios Tsokaros, Milton Ruiz, and Stuart L. Shapiro                                                                           |        |
| Cosmological constraints on late-Universe decaying dark matter as a solution to the $H_0$ tension (13 pages) .....                                                  | 043014 |
| Steven J. Clark, Kyriakos Vattis, and Savvas M. Koushiappas                                                                                                         |        |
| Fast radio bursts from axion stars moving through pulsar magnetospheres (6 pages) .....                                                                             | 043015 |
| James H. Buckley, P. S. Bhupal Dev, Francesc Ferrer, and Fa Peng Huang                                                                                              |        |
| Time dependent signatures of core-collapse supernova neutrinos at HALO (12 pages) .....                                                                             | 043016 |
| B. Ekinci, Y. Pehlivan, and Amol V. Patwardhan                                                                                                                      |        |
| Modeling of the tau and muon neutrino-induced optical Cherenkov signals from upward-moving extensive air showers (23 pages) .....                                   | 043017 |
| A. L. Cummings, R. Aloisio, and J. F. Krizmanic                                                                                                                     |        |
| Axion and dark photon limits from Crab Nebula high-energy gamma rays (9 pages) .....                                                                                | 043018 |
| Xiaojun Bi, Yu Gao, Jinguang Guo, Nick Houston, Tianjun Li, Fangzhou Xu, and Xin Zhang                                                                              |        |
| Observing the thermalization of dark matter in neutron stars (12 pages) .....                                                                                       | 043019 |
| Raghuveer Garani, Aritra Gupta, and Nirmal Raj                                                                                                                      |        |
| Machine learning gravitational waves from binary black hole mergers (15 pages) .....                                                                                | 043020 |
| Stefano Schmidt, Matteo Breschi, Rossella Gamba, Giulia Pagano, Piero Rettegno, Gunnar Riemenschneider, Sebastiano Bernuzzi, Alessandro Nagar, and Walter Del Pozzo |        |
| Maximum strength of the atmospheric electric field (9 pages) .....                                                                                                  | 043021 |
| Ashot Chilingarian, Tigran Karapetyan, Mary Zazyan, Gagik Hovsepyan, Balabek Sargsyan, Nina Nikolova, Hristo Angelov, Jaroslav Chum, and Rony Langer                |        |
| Long-term evolution of a merger-remnant neutron star in general relativistic magnetohydrodynamics: Effect of magnetic winding (23 pages) .....                      | 043022 |
| Masaru Shibata, Sho Fujibayashi, and Yuichiro Sekiguchi                                                                                                             |        |

PHYSICAL REVIEW D

THIRD SERIES, VOLUME 103, NUMBER 4

D15 FEBRUARY 2021

|                                                                                                                                                   |        |
|---------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Simultaneous estimation of astrophysical and cosmological stochastic gravitational-wave backgrounds with terrestrial detectors (8 pages) .....    | 043023 |
| Katarina Martinovic, Patrick M. Meyers, Mairi Sakellariadou, and Nelson Christensen                                                               |        |
| Primordial information content of Rayleigh anisotropies (12 pages) .....                                                                          | 043501 |
| William R. Coulton, Benjamin Beringue, and P. Daniel Meerburg                                                                                     |        |
| Volume statistics as a probe of large-scale structure (20 pages) .....                                                                            | 043502 |
| Kwan Chuen Chan and Nico Hamaus                                                                                                                   |        |
| Dark Energy Survey Year 3 results: Optimizing the lens sample in a combined galaxy clustering and galaxy-galaxy lensing analysis (26 pages) ..... | 043503 |
| A. Porredon <i>et al.</i> (DES Collaboration)                                                                                                     |        |
| GUT baryogenesis with primordial black holes (14 pages) .....                                                                                     | 043504 |
| Dan Hooper and Gordan Krnjaic                                                                                                                     |        |
| Paradigm of warm quintessential inflation and production of relic gravity waves (13 pages) .....                                                  | 043505 |
| M. R. Gangopadhyay, S. Myrzakul, M. Sami, and M. K. Sharma                                                                                        |        |
| Bayesian model selection on scalar $\epsilon$ -field dark energy (10 pages) .....                                                                 | 043506 |
| J. Alberto Vázquez, David Tamayo, Anjan A. Sen, and Israel Quiros                                                                                 |        |
| Entanglement entropy at critical points of classical evolution in oscillatory and exotic singularity multiverse models (15 pages) .....           | 043507 |
| Adam Balcerzak, Samuel Barroso-Bellido, Mariusz P. Dąbrowski, and Salvador Robles-Pérez                                                           |        |
| Fewer mocks and less noise: Reducing the dimensionality of cosmological observables with subspace projections (20 pages) .....                    | 043508 |
| Oliver H. E. Philcox, Mikhail M. Ivanov, Matias Zaldarriaga, Marko Simonović, and Marcel Schmittfull                                              |        |
| Detection of isotropic cosmic birefringence and its implications for axionlike particles including dark energy (16 pages) .....                   | 043509 |
| Tomohiro Fujita, Kai Murai, Hiromasa Nakatsuka, and Shinji Tsujikawa                                                                              |        |
| Rotation, embedding, and topology for the Szekeres geometry (19 pages) .....                                                                      | 043510 |
| Charles Hellaby and Robert G. Buckley                                                                                                             |        |
| Power spectrum of density perturbations in chain inflation (13 pages) .....                                                                       | 043511 |
| Martin Wolfgang Winkler and Katherine Freese                                                                                                      |        |
| ETHOS - an effective theory of structure formation: Impact of dark acoustic oscillations on cosmic dawn (15 pages) .....                          | 043512 |
| Julian B. Muñoz, Sebastian Bohr, Francis-Yan Cyr-Racine, Jesús Zavala, and Mark Vogelsberger                                                      |        |
| Hubble constant and sound horizon from the late-time Universe (9 pages) .....                                                                     | 043513 |
| Xue Zhang and Qing-Guo Huang                                                                                                                      |        |
| Dark energy and cosmological horizon thermal effects (12 pages) .....                                                                             | 043514 |
| Artyom V. Astashenok, Sergei D. Odintsov, and V. K. Oikonomou                                                                                     |        |
| Higher-curvature corrections and tensor modes (10 pages) .....                                                                                    | 043515 |
| William Giarè, Fabrizio Renzi, and Alessandro Melchiorri                                                                                          |        |
| Gauge transformation of scalar induced tensor perturbation during matter domination (11 pages) .....                                              | 043516 |
| Arshad Ali, Yungui Gong (龚云贵), and Yizhou Lu (卢一洲)                                                                                                |        |
| Constraints on the epoch of dark matter formation from Milky Way satellites (10 pages) .....                                                      | 043517 |
| Subinoy Das and Ethan O. Nadler                                                                                                                   |        |
| Early dark energy in $k$ -essence (6 pages) .....                                                                                                 | 043518 |
| S. X. Tian and Zong-Hong Zhu                                                                                                                      |        |
| Determining the neutrino lifetime from cosmology (7 pages) .....                                                                                  | 043519 |
| Zackaria Chacko, Abhish Dev, Peizhi Du, Vivian Poulin, and Yuhsin Tsai                                                                            |        |
| Accurate precision cosmology with redshift unknown gravitational wave sources (15 pages) .....                                                    | 043520 |
| Suvodip Mukherjee, Benjamin D. Wandelt, Samaya M. Nissanke, and Alessandra Silvestri                                                              |        |
| Critical review of prevailing explanations for the emergence of classicality in cosmology (11 pages) .....                                        | 043521 |
| Javier Berjon, Elias Okon, and Daniel Sudarsky                                                                                                    |        |

PHYSICAL REVIEW D

THIRD SERIES, VOLUME 103, NUMBER 4

D15 FEBRUARY 2021

|                                                                                                                                        |        |
|----------------------------------------------------------------------------------------------------------------------------------------|--------|
| Spontaneous vectorization of electrically charged black holes (9 pages) .....                                                          | 044004 |
| João M. S. Oliveira and Alexandre M. Pombo                                                                                             |        |
| Lensing rates of gravitational wave signals displaying beat patterns detectable by DECIGO and B-DECIGO (15 pages) .....                | 044005 |
| Shaoqi Hou (侯绍齐), Pengbo Li (李鹏博), Hai Yu (余海), Marek Biesiada, Xi-Long Fan (范锡龙),<br>Seiji Kawamura, and Zong-Hong Zhu (朱宗宏)          |        |
| BayesWave analysis pipeline in the era of gravitational wave observations (19 pages) .....                                             | 044006 |
| Neil J. Cornish, Tyson B. Littenberg, Bence Bécsy, Katerina Chatziioannou, James A. Clark,<br>Sudarshan Ghonge, and Margaret Millhouse |        |
| Testing wormhole solutions in extended gravity through the Poynting-Robertson effect (17 pages) .....                                  | 044007 |
| Vittorio De Falco, Emmanuele Battista, Salvatore Capozziello, and Mariafelicia De Laurentis                                            |        |
| Light deflection by squashed Kaluza-Klein black holes in a plasma medium (9 pages) .....                                               | 044008 |
| Ken Matsuno                                                                                                                            |        |
| Nontrivial Minkowski backgrounds in $f(T)$ gravity (8 pages) .....                                                                     | 044009 |
| Alexey Golovnev and María-José Guzmán                                                                                                  |        |
| $3 + 1$ formulation of the standard model extension gravity sector (19 pages) .....                                                    | 044010 |
| Kellie O'Neal-Ault, Quentin G. Bailey, and Nils A. Nilsson                                                                             |        |
| Thin shells in $(2 + 1)$ -dimensional $F(R)$ gravity (10 pages) .....                                                                  | 044011 |
| Ernesto F. Eiroa and Griselda Figueroa-Aguirre                                                                                         |        |
| Inferring the gravitational wave memory for binary coalescence events (16 pages) .....                                                 | 044012 |
| Neev Khera, Badri Krishnan, Abhay Ashtekar, and Tommaso De Lorenzo                                                                     |        |
| Modeling compact binary signals and instrumental glitches in gravitational wave data (11 pages) .....                                  | 044013 |
| Katerina Chatziioannou, Neil Cornish, Marcella Wijngaarden, and Tyson B. Littenberg                                                    |        |
| Aspects of the dyonic Kerr-Sen-AdS <sub>4</sub> black hole and its ultraspinning version (13 pages) .....                              | 044014 |
| Di Wu (吴迪), Shuang-Qing Wu (吴双清), Puxun Wu (吴普训), and Hongwei Yu (余洪伟)                                                                 |        |
| Matter shear and vorticity in conformally flat spacetimes (8 pages) .....                                                              | 044015 |
| Roger M. Mayala, Rituparno Goswami, and Sunil D. Maharaj                                                                               |        |
| Semilinear wave model for critical collapse (19 pages) .....                                                                           | 044016 |
| Isabel Suárez Fernández, Rodrigo Vicente, and David Hilditch                                                                           |        |

## PART B

|                                                                                                                                                |        |
|------------------------------------------------------------------------------------------------------------------------------------------------|--------|
|  Noise and decoherence induced by gravitons (14 pages) ..... | 044017 |
| Sugumi Kanno, Jiro Soda, and Junsei Tokuda                                                                                                     |        |
| Wormhole geometries induced by action-dependent Lagrangian theories (12 pages) .....                                                           | 044018 |
| Ismael Ayuso, Francisco S. N. Lobo, and José P. Mimoso                                                                                         |        |
| Spontaneous scalarization of a conducting sphere in Maxwell-scalar models (19 pages) .....                                                     | 044019 |
| Carlos A. R. Herdeiro, Taishi Ikeda, Masato Minamitsuji, Tomohiro Nakamura, and Eugen Radu                                                     |        |
| Gravitational decoupling for axially symmetric systems and rotating black holes (11 pages) .....                                               | 044020 |
| E. Contreras, J. Ovalle, and R. Casadio                                                                                                        |        |
| Signatures of $f(Q)$ gravity in cosmology (8 pages) .....                                                                                      | 044021 |
| Noemi Frusciante                                                                                                                               |        |
| Stability of rotating scalar boson stars with nonlinear interactions (16 pages) .....                                                          | 044022 |
| Nils Siemonsen and William E. East                                                                                                             |        |
| Implications of Kleinian relativity (11 pages) .....                                                                                           | 044023 |
| F. A. P. Alves-Júnior, A. B. Barreto, and F. Moraes                                                                                            |        |
| Probing fundamental physics with gravitational waves: The next generation (45 pages) .....                                                     | 044024 |
| Scott E. Perkins, Nicolás Yunes, and Emanuele Berti                                                                                            |        |
| Ruppeiner geometry, reentrant phase transition, and microstructure of Born-Infeld AdS black hole (18 pages) .....                              | 044025 |
| A. Naveena Kumara, C. L. Ahmed Rizwan, Kartheek Hegde, K. M. Ajith, and Md Sabir Ali                                                           |        |

| On-shell action and the Bekenstein-Hawking entropy of supersymmetric black holes in $AdS_6$ spacetimes (13 pages) .....                                                        | 046007 |
| Minwoo Suh                                                                                                                                                                     |        |
| Regularization of the cosmological sector of loop quantum gravity with bosonic matter and the related problems with general covariance of quantum corrections (20 pages) ..... | 046008 |
| Jakub Bilski                                                                                                                                                                   |        |
| Light dilaton in a metastable vacuum (7 pages) .....                                                                                                                           | 046009 |
| Daniel Elander, Maurizio Piai, and John Roughley                                                                                                                               |        |
| $\mathcal{N} = 1$ Supergravity with loop quantum gravity methods and quantization of the SUSY constraint (32 pages) .....                                                      | 046010 |
| Konstantin Eder and Hanno Sahlmann                                                                                                                                             |        |
| $O(d, d; \mathbb{Z})$ invariant Fierz-Pauli massive gravity (8 pages) .....                                                                                                    | 046011 |
| Toshifumi Noumi, Kaishu Saito, Jiro Soda, and Daisuke Yoshida                                                                                                                  |        |
| Jackiw-Teitelboim supergravity, minimal strings, and matrix models (15 pages) .....                                                                                            | 046012 |
| Clifford V. Johnson                                                                                                                                                            |        |
| Explorations of nonperturbative Jackiw-Teitelboim gravity and supergravity (22 pages) .....                                                                                    | 046013 |
| Clifford V. Johnson                                                                                                                                                            |        |
| Euclidean wormhole in the Sachdev-Ye-Kitaev model (15 pages) .....                                                                                                             | 046014 |
| Antonio M. García-García and Victor Godet                                                                                                                                      |        |
| RG limit cycles and unconventional fixed points in perturbative QFT (25 pages) .....                                                                                           | 046015 |
| Christian B. Jepsen, Igor R. Klebanov, and Fedor K. Popov                                                                                                                      |        |

PHYSICAL REVIEW D

THIRD SERIES, VOLUME 103, NUMBER 4

D15 FEBRUARY 2021

|                                                                                                |        |
|------------------------------------------------------------------------------------------------|--------|
| Quantum gravitational onset of Starobinsky inflation in a closed universe (20 pages) .....     | 046016 |
| Lucia Gordon, Bao-Fei Li, and Parampreet Singh                                                 |        |
| Path integral optimization from Hartle-Hawking wave function (7 pages) .....                   | 046017 |
| Jan Boruch, Pawel Caputa, and Tadashi Takayanagi                                               |        |
| Trifundamental quartic model (17 pages) .....                                                  | 046018 |
| Dario Benedetti, Razvan Gurau, and Sabine Harribey                                             |        |
| Wilson loops correlators in defect $\mathcal{N} = 4$ SYM (18 pages) .....                      | 046019 |
| Sara Bonansea and Renato Sánchez                                                               |        |
| New approach to the study of nonrelativistic bosonic string in flat spacetime (12 pages) ..... | 046020 |
| Rabin Banerjee, Sk. Moinuddin, and Pradip Mukherjee                                            |        |
| Free energy from replica wormholes (24 pages) .....                                            | 046021 |
| Netta Engelhardt, Sebastian Fischetti, and Alexander Maloney                                   |        |
| Bubble quenches in the AdS/BCFT model (13 pages) .....                                         | 046022 |
| Arthur G. Cavalcanti and Dmitry Melnikov                                                       |        |

## COMMENTS

|                                                                                                                                                   |        |
|---------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Comment on “Constraining the annihilating dark matter mass by the radio continuum spectral data of the NGC4214 galaxy” (3 pages) .....            | 048301 |
| Volker Heesen and Marcus Brüggen                                                                                                                  |        |
| Reply to “Comment on ‘Constraining the annihilating dark matter mass by the radio continuum spectral data of the NGC4214 galaxy’” (2 pages) ..... | 048302 |
| Man Ho Chan and Chak Man Lee                                                                                                                      |        |

This paper was highlighted in the APS publication *Physics* (physics.aps.org).
