

*The Table of Contents is a total listing of Parts A, B and C.*

*Part A consists of articles 101301–103521, Part B articles 103522–104048, and Part C articles 104049–108501(C)*

### PART A

#### LETTERS

|                                                                                                                                                            |         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Primordial black hole formation in nonminimal curvaton scenarios (8 pages) .....                                                                           | L101301 |
| Shi Pi (皮石) and Misao Sasaki (佐々木節)                                                                                                                        |         |
| Low-scale leptogenesis with low-energy Dirac $CP$ -violation (7 pages) .....                                                                               | L101302 |
| Alessandro Granelli, Silvia Pascoli, and Serguey T. Petcov                                                                                                 |         |
| Bounding the mass of ultralight bosonic dark matter particles with the motion of the S2 star around Sgr A* (8 pages) .....                                 | L101303 |
| Riccardo Della Monica and Ivan de Martino                                                                                                                  |         |
| Translating nano-Hertz gravitational wave background into primordial perturbations taking account of the cosmological QCD phase transition (7 pages) ..... | L101304 |
| Katsuya T. Abe and Yuichiro Tada                                                                                                                           |         |
| Treatments and placebos for the pathologies of effective field theories (6 pages) .....                                                                    | L101501 |
| Andrew Coates and Fethi M. Ramazanoğlu                                                                                                                     |         |
| Direct correspondence between Newtonian gravitation and general relativity (6 pages) .....                                                                 | L101502 |
| Thomas Buchert                                                                                                                                             |         |
| Inflationary gravitational wave background as a tail effect (6 pages) .....                                                                                | L101503 |
| Niko Jokela, K. Kajantie, Miika Sarkkinen, M. Laine, and Sami Nurmi                                                                                        |         |
| Scattering with neural operators (7 pages) .....                                                                                                           | L101701 |
| Sebastian Mizera                                                                                                                                           |         |
| What gravity mediated entanglement can really tell us about quantum gravity (7 pages) .....                                                                | L101702 |
| Eduardo Martín-Martínez and T. Rick Perche                                                                                                                 |         |
| Quantum chaos without false positives (7 pages) .....                                                                                                      | L101703 |
| Dmitrii A. Trunin                                                                                                                                          |         |
| Reconstruction of the quasinormal spectrum from pole skipping (6 pages) .....                                                                              | L101901 |
| Sašo Grozdanov, Timotej Lemut, and Juan F. Pedraza                                                                                                         |         |
| Euclidean wormholes in two-dimensional conformal field theories from quantum chaos and number theory (6 pages) .....                                       | L101902 |
| Felix M. Haehl, Wyatt Reeves, and Moshe Rozali                                                                                                             |         |
| Localizing wrapped M5-branes and gravitational blocks (7 pages) .....                                                                                      | L101903 |
| Pietro Benetti Genolini, Jerome P. Gauntlett, and James Sparks                                                                                             |         |
| New higher-spin curvatures in flat space (7 pages) .....                                                                                                   | L101904 |
| Nicolas Boulanger, Andrea Campoleoni, and Simon Pekar                                                                                                      |         |

(Continued)

This paper was highlighted in the APS publication *Physics* (physics.aps.org).

By suggesting a few manuscripts each week, we hope to promote reading across fields. Please see our Announcement Phys. Rev. D **90**, 020001 (2014).

ARTICLES

|                                                                                                                                                                                             |        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Study of scattered light in the main arms of the Einstein Telescope gravitational wave detector (16 pages) .....                                                                            | 102001 |
| M. Andrés-Carcasona, A. Macquet, M. Martínez, Ll. M. Mir, and H. Yamamoto                                                                                                                   |        |
| Using evolutionary algorithms to design antennas with greater sensitivity to ultrahigh energy neutrinos (17 pages) ....                                                                     | 102002 |
| J. Rolla, A. Machtay, A. Patton, W. Banzhaf, A. Connolly, R. Debolt, L. Deer, E. Fahimi, E. Ferstle,<br>P. Kuzma, C. Pfendner, B. Sipe, K. Staats, and S. A. Wissel (GENETIS Collaboration) |        |
| Tilt-to-length coupling in LISA Pathfinder: A data analysis (25 pages) .....                                                                                                                | 102003 |
| M. Armano <i>et al.</i>                                                                                                                                                                     |        |
| Search for neutrino lines from dark matter annihilation and decay with IceCube (18 pages) .....                                                                                             | 102004 |
| R. Abbasi <i>et al.</i> (IceCube Collaboration)                                                                                                                                             |        |
| Final results of Borexino on CNO solar neutrinos (15 pages) .....                                                                                                                           | 102005 |
| D. Basilico <i>et al.</i> (Borexino Collaboration)                                                                                                                                          |        |
| Improved constraints on minimum length models with a macroscopic low loss phonon cavity (8 pages) .....                                                                                     | 102006 |
| William M. Campbell, Michael E. Tobar, Maxim Goryachev, and Serge Galliou                                                                                                                   |        |
| Searching for gravitational wave burst in pulsar-timing-array data with piecewise linear functions (15 pages) .....                                                                         | 102007 |
| Heling Deng, Bence Bécsy, Xavier Siemens, Neil J. Cornish, and Dustin R. Madison                                                                                                            |        |
| Role of turbulence and winding in the development of large-scale, strong magnetic fields in long-lived remnants of binary neutron star mergers (18 pages) .....                             | 103001 |
| Ricard Aguilera-Miret, Carlos Palenzuela, Federico Carrasco, and Daniele Viganò                                                                                                             |        |
| Gravitational waves from axions annihilation through quantum field theory (11 pages) .....                                                                                                  | 103002 |
| Jing Yang and Fa Peng Huang                                                                                                                                                                 |        |
| Distinguishing binary black hole precessional morphologies with gravitational wave observations (15 pages) .....                                                                            | 103003 |
| Nathan K. Johnson-McDaniel, Khun Sang Phukon, N. V. Krishnendu, and Anuradha Gupta                                                                                                          |        |
| Anisotropic mass segregation: Two-component mean-field model (25 pages) .....                                                                                                               | 103004 |
| Hanxi Wang and Bence Kocsis                                                                                                                                                                 |        |
| Heavy-tailed likelihoods for robustness against data outliers: Applications to the analysis of gravitational wave data (17 pages) .....                                                     | 103005 |
| Argyro Sasli, Nikolaos Karnesis, and Nikolaos Stergioulas                                                                                                                                   |        |
| Structure-preserving numerical simulations of test particle dynamics around slowly rotating neutron stars within the Hartle-Thorne approach (21 pages) .....                                | 103006 |
| Misbah Shahzadi, Martin Kološ, Rabia Saleem, Yousaf Habib, and Adrián Eduarte-Rojas                                                                                                         |        |
| Complex evaluation of angular power spectra: Going beyond the Limber approximation (14 pages) .....                                                                                         | 103007 |
| Job Feldbrugge                                                                                                                                                                              |        |
| Limit on the intergalactic magnetic field from the ultrahigh-energy cosmic ray hotspot in the Perseus-Pisces region (7 pages) .....                                                         | 103008 |
| Andrii Neronov, Dmitri Semikoz, and Oleg Kalashev                                                                                                                                           |        |
| Searching for structure in the binary black hole spin distribution (15 pages) .....                                                                                                         | 103009 |

| E. S. Moreira                                                                                                           |        |
| Quantum uncertainty of gravitational field and entanglement in superposed massive particles (13 pages) .....            | 105019 |
| Yuuki Sugiyama, Akira Matsumura, and Kazuhiro Yamamoto                                                                  |        |
| Unruh phenomena and thermalization for qudit detectors (14 pages) .....                                                 | 105020 |
| Caroline Lima, Everett Patterson, Erickson Tjoa, and Robert B. Mann                                                     |        |
| Non-Abelian magnetic field and curvature effects on pair production (29 pages) .....                                    | 105021 |
| S. Kürkcüoğlu, B. Özcan, and G. Ünal                                                                                    |        |
| Dynamical mass generation of spin-2 fields in de Sitter space for an $O(N)$ symmetric model at large $N$ (8 pages) .... | 105022 |
| Nahomi Kan and Kiyoshi Shiraishi                                                                                        |        |
| Refined quantum Lyapunov exponents from replica out-of-time-order correlators (28 pages) .....                          | 105023 |
| Dmitrii A. Trunin                                                                                                       |        |
| Deterministic chaos vs integrable models (11 pages) .....                                                               | 105024 |
| Stefano Negro, Fedor K. Popov, and Jacob Sonnenschein                                                                   |        |
| Chiral fermion anomaly as a memory effect (22 pages) .....                                                              | 105025 |
| Adrián del Río and Ivan Agullo                                                                                          |        |
| More on the spin-2 analog of the massive BF model (13 pages) .....                                                      | 105026 |
| A. L. R. dos Santos and D. Dalmazi                                                                                      |        |
| Bootstrability in line-defect CFTs with improved truncation methods (23 pages) .....                                    | 105027 |
| V. Niarchos, C. Papageorgakis, P. Richmond, A. G. Stapleton, and M. Woolley                                             |        |
| Extended phase space quantization of a black hole interior model in loop quantum cosmology (16 pages) .....             | 106001 |
| Beatriz Elizaga Navascués, Guillermo A. Mena Marugán, and Andrés Mínguez-Sánchez                                        |        |
| $\mathcal{N} = 2$ Schur index and line operators (40 pages) .....                                                       | 106002 |
| Zhaoting Guo, Yutong Li, Yiwen Pan, and Yufan Wang                                                                      |        |
| Angular momentum loss due to spin-orbit effects in the post-Minkowskian expansion (16 pages) .....                      | 106003 |
| Carlo Heissenberg                                                                                                       |        |
| Physical relevance of the fiducial cell in loop quantum cosmology (13 pages) .....                                      | 106004 |
| Fabio M. Mele and Johannes Münch                                                                                        |        |
| Defect extremal surfaces for entanglement negativity (32 pages) .....                                                   | 106005 |
| Debarshi Basu, Himanshu Parihar, Vinayak Raj, and Gautam Sengupta                                                       |        |
| Pole skipping as missing states (14 pages) .....                                                                        | 106006 |
| Makoto Natsuume and Takashi Okamura                                                                                     |        |
| Consistent sphere reductions of gravity to two dimensions (13 pages) .....                                              | 106007 |
| Franz Ciceri and Henning Samtleben                                                                                      |        |
| Comparison between holographic deformed AdS and soft wall models for fermions (13 pages) .....                          | 106008 |
| Ayrton da Cruz Pereira do Nascimento and Henrique Boschi-Filho                                                          |        |
| Unsupervised machine learning techniques for exploring tropical coamoeba, brane tilings and Seiberg duality (15 pages)  | 106009 |
| Rak-Kyeong Seong                                                                                                        |        |
| Distilled density matrices of holographic partial entanglement entropy from thread-state correspondence (18 pages)      | 106010 |
| Yi-Yu Lin                                                                                                               |        |
| Thermodynamic curvature of charged black holes with AdS <sub>2</sub> horizons (11 pages) .....                          | 106011 |
| Aditya Singh, Poulami Mukherjee, and Chandrasekhar Bhamidipati                                                          |        |

PHYSICAL REVIEW D

THIRD SERIES, VOLUME 108, NUMBER 10

D15 NOVEMBER 2023

|                                                                                                                                                                                            |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| $Q\bar{Q}qqq$ quark system, compact pentaquark, and gauge/string duality. II (23 pages) .....                                                                                              | 106012 |
| Oleg Andreev                                                                                                                                                                               |        |
| QCD-compatible supermassive inert top-down holographic mesinos at intermediate coupling (19 pages) .....                                                                                   | 106013 |
| Aalok Misra and Gopal Yadav                                                                                                                                                                |        |
| Enhancement of quantum gravity signal in an optomechanical experiment (18 pages) .....                                                                                                     | 106014 |
| Youka Kaku, Tomohiro Fujita, and Akira Matsumura                                                                                                                                           |        |
| From black hole to one-dimensional chain: Parity symmetry breaking and kink formation (11 pages) .....                                                                                     | 106015 |
| Zhi-Hong Li, Han-Qing Shi, and Hai-Qing Zhang                                                                                                                                              |        |
| Dynamical holographic QCD model for spontaneous chiral symmetry breaking and confinement (21 pages) .....                                                                                  | 106016 |
| Alfonso Ballon-Bayona, Tobias Frederico, Luis A. H. Mamani, and Wayne de Paula                                                                                                             |        |
| Quench dynamics in holographic first-order phase transition (18 pages) .....                                                                                                               | 106017 |
| Qian Chen, Yuxuan Liu, Yu Tian, Xiaoning Wu, and Hongbao Zhang                                                                                                                             |        |
|  Branes and bundles through conifold transitions and dualities in heterotic string theory (38 pages) ..... | 106018 |
| Lara B. Anderson, Callum R. Brodie, and James Gray                                                                                                                                         |        |
| Higher spin $AdS_3$ gravity and Tits-Satake diagrams (29 pages) .....                                                                                                                      | 106019 |
| R. Sammani, Y. Boujakhrou, E. H. Saidi, R. Ahl Laamara, and L. B. Drissi                                                                                                                   |        |
| From complexity geometry to holographic spacetime (22 pages) .....                                                                                                                         | 106020 |
| Johanna Erdmenger, Anna-Lena Weigel, Marius Gerbershagen, and Michal P. Heller                                                                                                             |        |
| Duality-invariant nonlinear electrodynamics and stress tensor flows (33 pages) .....                                                                                                       | 106021 |
| Christian Ferko, Sergei M. Kuzenko, Liam Smith, and Gabriele Tartaglino-Mazzucchelli                                                                                                       |        |
| Quantum reference frames at the boundary of spacetime (22 pages) .....                                                                                                                     | 106022 |
| Viktoria Kabel, Ľaslav Brukner, and Wolfgang Wieland                                                                                                                                       |        |
| Knot-quiver correspondence for double twist knots (11 pages) .....                                                                                                                         | 106023 |
| Vivek Kumar Singh, Sachin Chauhan, P. Ramadevi, Aditya Dwivedi, B. P. Mandal, and Siddharth Dwivedi                                                                                        |        |

## COMMENTS
