

*The Table of Contents is a total listing of Parts A, B and C.*

*Part A consists of articles 021101–023513, Part B articles 023514–024039, and Part C articles 024040–026030(A)*

### PART A

#### LETTERS

|                                                                                                                                 |         |
|---------------------------------------------------------------------------------------------------------------------------------|---------|
| Magnetic levitation as a new probe of non-Newtonian gravity (7 pages) .....                                                     | L021101 |
| Dorian W. P. Amaral, Tim M. Fuchs, Hendrik Ulbricht, and Christopher D. Tunnell                                                 |         |
| Relativistic ions with power-law spectra explain radio phoenixes (5 pages) .....                                                | L021301 |
| Uri Keshet                                                                                                                      |         |
| GW231123: Binary black hole merger or cosmic string? (6 pages) .....                                                            | L021302 |
| Iuliu Cuceu, Marie Anne Bizouard, Nelson Christensen, and Mairi Sakellariadou                                                   |         |
| Diagnosing interstellar magnetic turbulence with TeV pulsar halos (6 pages) .....                                               | L021303 |
| Chao-Ming Li, Ruo-Yu Liu, and Huirong Yan                                                                                       |         |
| Probing baryogenesis with gravitational waves (9 pages) .....                                                                   | L021304 |
| Yanou Cui, Anish Ghoshal, Pankaj Saha, and Evangelos I. Sfakianakis                                                             |         |
| Constraining the neutron star–black hole merger rate (7 pages) .....                                                            | L021305 |
| Ian Harry and Charlie Hoy                                                                                                       |         |
| Testing models for angular power spectra: A distribution-free approach (7 pages) .....                                          | L021306 |
| Sara Algeri, Xiangyu Zhang, Erik Floden, Hongru Zhao, Galin L. Jones, Vuk Mandic, and Jesse Miller                              |         |
| Adding electromagnetic birefringence to pulsar timing and astrometry to detect gravitational waves (5 pages) .....              | L021307 |
| Keisuke Inomata and Marc Kamionkowski                                                                                           |         |
| Accurate pulsar timing array residual variances and correlation of the stochastic gravitational-wave background (6 pages) ..... | L021501 |
| Reginald Christian Bernardo and Kin-Wang Ng                                                                                     |         |
| Euclidean teleparallel relativity and black hole partition functions (6 pages) .....                                            | L021502 |
| Jose Beltrán Jiménez and Tomi S. Koivisto                                                                                       |         |
| Soft unification of exceptional effective field theories in de Sitter space (7 pages) .....                                     | L021701 |
| Zong-Zhe Du                                                                                                                     |         |
| Extracting edge modes: Reduction of 3D and 2D gravities (6 pages) .....                                                         | L021901 |
| Euihun Joung and Sejin Kim                                                                                                      |         |
| Four-dimensional spectrum generating algebra for superstrings (7 pages) .....                                                   | L021902 |
| Renann Lipinski Jusinkas and Aravindhan Srinivasan                                                                              |         |
| Monodromy relations for string amplitudes on AdS space (6 pages) .....                                                          | L021903 |
| Luis F. Alday, Rodrigo S. Pitombo, and Aurélie Strömholm Sangaré                                                                |         |
| Undecidability in spacetime geometry via the AdS/CFT correspondence (7 pages) .....                                             | L021904 |
| Sameer Ahmad Mir, Francesco Marino, Arshid Shabir, Lawrence M. Krauss, and Mir Faizal                                           |         |
| Can gravity mediate the transmission of quantum information? (8 pages) .....                                                    | L021905 |
| Andrea Mari, Stefano Zippilli, and David Vitali                                                                                 |         |

| Proof-of-principle demonstration of a polarization-circulation speed meter ( <i>10 pages</i> ) .....                                                                                       | 022004 |
| Yohei Nishino, Tomotada Akutsu, Yoichi Aso, Munetake Otsuka, Luise Kranzhoff, and Takayuki Tomaru                                                                                          |        |
| Constraining axionlike particle mediated dark matter with observational constraints: A statistical and machine learning approach ( <i>22 pages</i> ) .....                                 | 023001 |
| Prashant Thakur, Aravind Taridalu, Ishfaq Ahmad Rather, Tanech Klangburam, and Chakrit Pongkitivanichkul                                                                                   |        |
| Is the trace anomaly at its minimum value at neutron star centers? ( <i>13 pages</i> ) .....                                                                                               | 023002 |
| Bao-Jun Cai, Bao-An Li, and Yu-Gang Ma                                                                                                                                                     |        |
| Searching for intermediate mass ratio binary black hole mergers in the third observing run of LIGO-Virgo-KAGRA ( <i>23 pages</i> ) .....                                                   | 023003 |
| Mark Ho-Yeuk Cheung, Digvijay Wadekar, Ajit Kumar Mehta, Tousif Islam, Javier Roulet, Emanuele Berti, Tejaswi Venumadhav, Barak Zackay, and Matias Zaldarriaga                             |        |
| Forecasted detection limits on the dark matter density in supermassive black hole binaries for LISA ( <i>17 pages</i> ) .....                                                              | 023004 |
| Matthias Daniel, Kris Pardo, and Laura Sagunski                                                                                                                                            |        |
| Setting limits on blazar-boosted dark matter with xenon-based detectors ( <i>10 pages</i> ) .....                                                                                          | 023005 |
| Erin Barillier, Laura Manenti, Knut Morå, Paolo Padovani, Isaac Sarnoff, Yongheng Xu, Björn Penning, and Francesco Arneodo                                                                 |        |
| Cavitation instability in unmagnetized relativistic pair shocks ( <i>18 pages</i> ) .....                                                                                                  | 023006 |
| Ivan Demidov, Yuri Lyubarsky, and Uri Keshet                                                                                                                                               |        |
| Pair luminosity and cooling of newborn strange star: Unpaired quarks ( <i>9 pages</i> ) .....                                                                                              | 023007 |
| Mikalai Prakapenia and Gregory Vereshchagin                                                                                                                                                |        |
| Influence of supermassive primordial black holes on ultraviolet luminosity of high-redshift galaxies ( <i>10 pages</i> ) .....                                                             | 023008 |
| Yi-Yang Li, Hai-Long Huang, and Yun-Song Piao                                                                                                                                              |        |
| Stability of anisotropic neutron stars ( <i>14 pages</i> ) .....                                                                                                                           | 023009 |
| L. M. Becerra, E. A. Becerra-Vergara, F. D. Lora-Clavijo, and J. F. Rodriguez                                                                                                              |        |
| Thermodynamics of self-gravitating fermions as a robust theory for dark matter halos: Stability analysis applied to the Milky Way ( <i>24 pages</i> ) .....                                | 023010 |
| A. Krut, C. R. Argüelles, and P.-H. Chavanis                                                                                                                                               |        |
| Convective stability analysis of massive neutron stars formed in binary mergers ( <i>24 pages</i> ) .....                                                                                  | 023011 |
| Yong Gao, Kota Hayashi, Kenta Kiuchi, Alan Tsz-Lok Lam, Hao-Jui Kuan, and Masaru Shibata                                                                                                   |        |
| Gravitational signatures of axion dark matter via parity-violating interactions ( <i>8 pages</i> ) .....                                                                                   | 023012 |
| Marco Figliolia, Francesco Grippa, Gaetano Lambiase, and Luca Visinelli                                                                                                                    |        |
| Rapidly rotating hot nuclear and hypernuclear compact stars: Integral parameters and universal relations ( <i>20 pages</i> ) .....                                                         | 023013 |
| Stefanos Tsiopelas, Armen Sedrakian, and Micaela Oertel                                                                                                                                    |        |
| Neutrinos from stars in the Milky Way ( <i>15 pages</i> ) .....                                                                                                                            | 023014 |
| Pablo Martínez-Miravé and Irene Tamborra                                                                                                                                                   |        |
| Earth's rotation perturbation by gravitational waves from compact binaries ( <i>14 pages</i> ) .....                                                                                       | 023015 |
