THIRD SERIES, VOLUME 99, NUMBER 5

CONTENTS

D1 MARCH 2019

*The Table of Contents is a total listing of Parts A and B.*

*Part A consists of articles 051101–054505, and Part B articles 054506–059905(E)*

## PART A

### RAPID COMMUNICATIONS

|                                                                                                                                                |           |
|------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| Study of electromagnetic Dalitz decays $\chi_{cJ} \rightarrow \mu^+ \mu^- J/\psi$ (8 pages) .....                                              | 051101(R) |
| M. Ablikim <i>et al.</i> (BESIII Collaboration)                                                                                                |           |
| Measurement of the longitudinal spin asymmetries for weak boson production in proton-proton collisions at $\sqrt{s} = 510$ GeV (9 pages) ..... | 051102(R) |
| J. Adam <i>et al.</i> (STAR Collaboration)                                                                                                     |           |
| Top-quark pair hadroproduction at next-to-next-to-leading order in QCD (5 pages) .....                                                         | 051501(R) |
| Stefano Catani, Simone Devoto, Massimiliano Grazzini, Stefan Kallweit, Javier Mazzitelli, and Hayk Sargsyan                                    |           |
| Collinearly improved kernel suppresses Coulomb tails in the impact-parameter dependent Balitsky-Kovchegov evolution (6 pages) .....            | 051502(R) |
| J. Cepila, J. G. Contreras, and M. Matas                                                                                                       |           |
| Hunting sub-GeV dark matter with the NO $\nu$ A near detector (6 pages) .....                                                                  | 051701(R) |
| Patrick deNiverville and Claudia Fruguele                                                                                                      |           |
| Flavor of cosmic neutrinos preserved by ultralight dark matter (8 pages) .....                                                                 | 051702(R) |
| Yasaman Farzan and Sergio Palomares-Ruiz                                                                                                       |           |

### ARTICLES

|                                                                                                                                                                            |        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Search for Higgs-like particles produced in association with bottom quarks in proton-antiproton collisions (10 pages) .....                                                | 052001 |
| T. Aaltonen <i>et al.</i> (CDF Collaboration)                                                                                                                              |        |
| Search for pair production of first-generation scalar leptoquarks at $\sqrt{s} = 13$ TeV (28 pages) .....                                                                  | 052002 |
| A. M. Sirunyan <i>et al.</i> (CMS Collaboration)                                                                                                                           |        |
| Search for heavy long-lived multicharged particles in proton-proton collisions at $\sqrt{s} = 13$ TeV using the ATLAS detector (26 pages) .....                            | 052003 |
| M. Aaboud <i>et al.</i> (ATLAS Collaboration)                                                                                                                              |        |
| Properties of $g \rightarrow b\bar{b}$ at small opening angles in $pp$ collisions with the ATLAS detector at $\sqrt{s} = 13$ TeV (26 pages) .....                          | 052004 |
| M. Aaboud <i>et al.</i> (ATLAS Collaboration)                                                                                                                              |        |
| Search for long-lived particles produced in $pp$ collisions at $\sqrt{s} = 13$ TeV that decay into displaced hadronic jets in the ATLAS muon spectrometer (36 pages) ..... | 052005 |
| M. Aaboud <i>et al.</i> (ATLAS Collaboration)                                                                                                                              |        |
| Measurement of the mass and production rate of $\Xi_b^-$ baryons (13 pages) .....                                                                                          | 052006 |
| R. Aaij <i>et al.</i> (LHCb Collaboration)                                                                                                                                 |        |

This paper was highlighted in the APS publication *Physics* (physics.aps.org).

By suggesting a few manuscripts each week, we hope to promote reading across fields. Please see our Announcement Phys. Rev. D **90**, 010001 (2014).

|                                                                                                                                                                                                                                                                                              |        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Using world $\pi^\pm$ -nucleus scattering data to constrain an intranuclear cascade model (24 pages) .....                                                                                                                                                                                   | 052007 |

| Sensitivity of future lepton colliders to the search for charged lepton flavor violation (14 pages) .....                                                                        | 055038 |
| Tong Li and Michael A. Schmidt                                                                                                                                                   |        |
| $R$ -parity violation and light neutralinos at CODEX-b, FASER, and MATHUSLA (14 pages) .....                                                                                     | 055039 |
| Daniel Dercks, Jordy de Vries, Herbi K. Dreiner, and Zeren Simon Wang                                                                                                            |        |
| Asymmetric dark matter, inflation, and leptogenesis from $B-L$ symmetry breaking (17 pages) .....                                                                                | 055040 |
| Phung Van Dong, D. T. Huong, Daniel A. Camargo, Farinaldo S. Queiroz, and José W. F. Valle                                                                                       |        |
| Dark matter and $B$ -meson anomalies in a flavor dependent gauge symmetry (8 pages) .....                                                                                        | 055041 |
| Parada T. P. Hutaeruk, Takaaki Nomura, Hiroshi Okada, and Yuta Orikasa                                                                                                           |        |
| Probing neutrino Dirac mass in left-right symmetric models at the LHC and next generation colliders (16 pages) .....                                                             | 055042 |
| Juan Carlos Helo, Haolin Li, Nicolás A. Neill, Michael Ramsey-Musolf, and Juan Carlos Vasquez                                                                                    |        |
| <i>MICROSCOPE</i> limits on the strength of a new force with comparisons to gravity and electromagnetism (10 pages) .....                                                        | 055043 |
| Pierre Fayet                                                                                                                                                                     |        |
| Simple $A_4$ models for dark matter stability with texture zeros (6 pages) .....                                                                                                 | 055044 |
| Leon M. G. de la Vega, R. Ferro-Hernandez, and E. Peinado                                                                                                                        |        |
| Particle physics origin of the 5 MeV bump in the reactor antineutrino spectrum? (13 pages) .....                                                                                 | 055045 |
| Jeffrey M. Berryman, Vedran Brdar, and Patrick Huber                                                                                                                             |        |

(Continued)

This paper was highlighted in the APS publication *Physics* (physics.aps.org).

By suggesting a few manuscripts each week, we hope to promote reading across fields. Please see our Announcement Phys. Rev. D **90**, 010001 (2014).
