### RAPID COMMUNICATIONS

|                                                                                                                                                                                                                                          |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Low-temperature phase of the three-state antiferromagnetic Potts model on the simple-cubic lattice . . . . .                                                                                                                             | R5885 |
| Alessandro Pelizzola                                                                                                                                                                                                                     |       |
| Stabilization of the less stable orbit by a tiny near-resonance periodic signal . . . . .                                                                                                                                                | R5889 |
| H. L. Yang, Z. Q. Huang, and E. J. Ding                                                                                                                                                                                                  |       |
| Dimensional crossovers and anomalous scaling of single and reacting random walkers in baguettelike lattices:<br>Monte Carlo simulations of the number of distinct sites visited and of bimolecular $A + A$ and $A + B$ reactions . . . . | R5893 |
| Anna L. Lin, Raoul Kopelman, and Panos Argyrakis                                                                                                                                                                                         |       |
| Finite size effects in simulations of glass dynamics . . . . .                                                                                                                                                                           | R5897 |
| Jürgen Horbach, Walter Kob, Kurt Binder, and C. Austen Angell                                                                                                                                                                            |       |
| Large-scale flow properties of turbulent thermal convection . . . . .                                                                                                                                                                    | R5901 |
| S. Ciliberto, S. Cioni, and C. Laroche                                                                                                                                                                                                   |       |
| Simulation of the binary hard-sphere crystal/melt interface . . . . .                                                                                                                                                                    | R5905 |
| Ruslan L. Davidchack and Brian B. Laird                                                                                                                                                                                                  |       |
| Stringlike patterns in critical polymer mixtures under steady shear flow . . . . .                                                                                                                                                       | R5909 |
| Erik K. Hobbie, Sanghoon Kim, and Charles C. Han                                                                                                                                                                                         |       |
| Self-diffusion near the percolation threshold in reverse microemulsions . . . . .                                                                                                                                                        | R5913 |
| Brian Antalek, Antony J. Williams, and John Texter                                                                                                                                                                                       |       |
| Monte Carlo study of excluded volume effects in wormlike micelles and semiflexible polymers . . . . .                                                                                                                                    | R5917 |
| Jan Skov Pedersen, Manuel Laso, and Peter Schurtenberger                                                                                                                                                                                 |       |
| Frequency-modulated autowaves in excitable media . . . . .                                                                                                                                                                               | R5921 |
| A. P. Muñuzuri, V. A. Davydov, M. Gómez-Gesteira, V. Pérez-Muñuzuri, and V. Pérez-Villar                                                                                                                                                 |       |

### ARTICLES

#### General methods of statistical physics

|                                                                                                           |      |
|-----------------------------------------------------------------------------------------------------------|------|
| Exponential distributions in a mechanical model for earthquakes . . . . .                                 | 5925 |
| M. de Sousa Vieira                                                                                        |      |
| Dynamics of a system consisting of a van der Pol oscillator coupled to a Duffing oscillator . . . . .     | 5929 |
| P. Wofo, J. C. Chedjou, and H. B. Fotsin                                                                  |      |
| Growth equations for the Wolf-Villain and Das Sarma–Tamborenea models of molecular-beam epitaxy . . . . . | 5935 |
| Zhi-Feng Huang and Bing-Lin Gu                                                                            |      |
| Effects of bias on the kinetics of $A + B \rightarrow C$ with initially separated reactants . . . . .     | 5942 |
| Haim Taitelbaum, Andrew Yen, Raoul Kopelman, Shlomo Havlin, and George H. Weiss                           |      |
| Antiresonance and localization in quantum dynamics . . . . .                                              | 5948 |
| I. Dana, E. Eisenberg, and N. Shnerb                                                                      |      |
| Kinetics of a Verhulst-type system with nonlinearly coupled noise . . . . .                               | 5964 |
| R. Zygałło                                                                                                |      |
| Riemannian theory of Hamiltonian chaos and Lyapunov exponents . . . . .                                   | 5969 |
| Lapo Casetti, Cecilia Clementi, and Marco Pettini                                                         |      |
| Properties of the class of power-logistic maps . . . . .                                                  | 5985 |
| T. T. Chia and B. L. Tan                                                                                  |      |
| Theory of continuum percolation. I. General formalism . . . . .                                           | 5992 |
| Alon Drory                                                                                                |      |
