THIRD SERIES, VOLUME 55, NUMBER 5
PARTS A AND B

CONTENTS

MAY 1997

The Table of Contents is a total listing of Parts A and B.
Part A consists of pages 4841–5650, and Part B pages 5651–6314.

PART A

Note to Reader i

RAPID COMMUNICATIONS

Analytic study of domain growth in the Ising model with quenched impurities R4841
Zhi-Feng Huang and Bing-Lin Gu

Adaptive targeting of chaos R4845
S. Boccaletti, A. Farini, E. J. Kostelich, and F. T. Arecchi

Thermodynamics of dissipative quantum systems by effective potential R4849
Alessandro Cuccoli, Andrea Rossi, Valerio Tognetti, and Ruggero Vaia

Heuristic approach to the strong-coupling regime of the Kardar-Parisi-Zhang equation R4853
Semjon Stepanow

Parametric correlations of phase shifts and statistics of time delays in quantum chaotic scattering: Crossover between unitary and orthogonal symmetries R4857
Yan V. Fyodorov, Dmitry V. Savin, and Hans-Jürgen Sommers

Synchronism in symmetric hyperchaotic systems R4861
Ying-Cheng Lai

Randomly pinned landscape evolution R4865
Guido Caldarelli, Achille Giacometti, Amos Maritan, Ignacio Rodriguez-Iturbe, and Andrea Rinaldo

Competition between spiral-defect chaos and rolls in Rayleigh-Bénard convection R4869
Kapil M. S. Bajaj, David S. Cannell, and Guenter Ahlers

From zero-dimension cavities to free-energy functionals for hard disks and hard spheres R4873
P. Tarazona and Y. Rosenfeld

Large-scale flow and spiral core instability in Rayleigh-Bénard convection R4877
Igor Aranson, Michel Assenheimer, Victor Steinberg, and Lev S. Tsimring

Three-point correlation function of a scalar mixed by an almost smooth random velocity field R4881
E. Balkovsky, G. Falkovich, and V. Lebedev

Ellipsometric study of freely suspended smectic films of a partially fluorinated compound R4885
D. Schlauf, Ch. Bahr, and C. C. Huang

Hartree-Fock statistical approach to atoms and photoabsorption in plasmas R4889
T. Blenski, A. Grimaldi, and F. Perrot

Centrifugal space-charge force of an electron beam in a focusing element R4893
Bruce E. Carlsten

Dynamic spontaneous fluorescence in parametric wave coupling R4897
Stefano Trillo and Stefan Wabnitz

Phase properties of the optical near field R4901
R. Carminati

Cluster Monte Carlo: Scaling of systematic errors in the two-dimensional Ising model R4905
Lev N. Shchur and Henk W. J. Blöte

(Continued)

1063-651X(199705)55:5:A;1-I

PHYSICAL REVIEW E THIRD SERIES, VOLUME 55, NUMBER 5 MAY 1997

General methods of statistical physics

Self-similarity and transport in the standard map 4909
S. Benkadda, S. Kassibrakis, R. B. White, and G. M. Zaslavsky
Variational layer expansion for kinetic processes 4918
Giorgio J. Moro and Franco Cardin
Tracking unstable periodic orbits in nonstationary high-dimensional chaotic systems: Method and experiment 4935
Bruce J. Gluckman, Mark L. Spano, Weiming Yang, Mingzhou Ding, Visarath In, and William L. Ditto
Glassy behavior of the site frustrated percolation model 4943
Silvia Scarpetta, Antonio de Candia, and Antonio Coniglio
Evolution of wave packets in quasi-one-dimensional and one-dimensional random media: Diffusion versus localization 4951
F. M. Izrailev, T. Kottos, A. Politi, and G. P. Tsironis
Symmetry-breaking perturbations and strange attractors 4964
Anna Litvak-Hinenzon and Vered Rom-Kedar
Adaptive synchronization of chaos for secure communication 4979
S. Boccaletti, A. Farini, and F. T. Arecchi
Critical point in a two-dimensional planar model 4982
R. Ganguly
Correlation functions in classical solids 4990
J. S. McCarley and N. W. Ashcroft
Synchronization of chaotic systems by using occasional coupling 5004
Ömer Morgül and Moez Feki
Scaling limit of the Ising model in a field 5011
Uwe Grimm and Bernard Nienhuis
Model for growth of binary alloys with fast surface equilibration 5026
Barbara Drossel and Mehran Kardar
Fluctuations far from equilibrium: Hyperbolic transport 5033
F. Vázquez, J. A. del Río, and M. López de Haro
Control of crisis-induced intermittency in the dynamics of a kicked, damped spin 5044
Krzysztof Kacperski and Janusz A. Hołyst
Characterizing the dynamics of stochastic bistable systems by measures of complexity 5050
Annette Witt, Alexander Neiman, and Jürgen Kurths
Kinetics of dichotomous noise-induced transitions in a multistable multivariate system 5060
Steve Guillouzic and Ivan L'Heureux
Studies of phase turbulence in the one-dimensional complex Ginzburg-Landau equation 5073
Alessandro Torcini, Helge Frauenkron, and Peter Grassberger
Horseshoe templates with global torsion in a driven laser 5082
G. Boulant, M. Lefranc, S. Bielawski, and D. Derozier
Universality in the Frenkel-Kontorova model with a cosh-type interaction 5092
Chung-I Chou, Choon-Lin Ho, and Bambi Hu
Thermodynamics of phase transitions and chemical reactions in the presence of quasistatic electromagnetic fields 5102
Y. Zimmels
Vortex annihilation in the ordering kinetics of the O(2) model 5113
Gene F. Mazenko and Robert A. Wickham
Solving the Langevin equation with stochastic algebraically correlated noise 5126
M. Płoszajczak and T. Srokowski
Nonlinear dynamics of damped and driven velocity-dependent systems 5134
A. Venkatesan and M. Lakshmanan

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 55, NUMBER 5** **MAY 1997**

Transport theory yields renormalization-group equations 5147
Jochen Rau
Chaotic behavior and damage spreading in the Glauber Ising model: A master equation approach 5157
Thomas Vojta
Asymptotic limits and zeros of chromatic polynomials and ground-state entropy of Potts antiferromagnets 5165
Robert Shrock and Shan-Ho Tsai
Transport of elastically coupled particles in an asymmetric periodic potential 5179
Z. Csahók, F. Family, and T. Vicsek
Complex-temperature phase diagrams of one-dimensional spin models with next-nearest-neighbor couplings 5184
Robert Shrock and Shan-Ho Tsai
Metastate approach to thermodynamic chaos 5194
C. M. Newman and D. L. Stein
Semiclassical approximations to diffractive effects in the annulus billiard 5212
N. C. Snaith and D. A. Goodings
Three-species monomer-monomer model: A mean-field analysis and Monte Carlo study 5225
Kevin E. Bassler and Dana A. Browne
Effective deterministic models for chaotic dynamics perturbed by noise 5234
Lars Jaeger and Holger Kantz
Analysis of bifurcation patterns in reaction-diffusion systems: Effect of external noise on the Brusselator model 5248
Srinivas S. Yerrapragada, Jayanta K. Bandyopadhyay, V. K. Jayaraman, and B. D. Kulkarni
Quantum mechanics of lattice gas automata: One-particle plane waves and potentials 5261
David A. Meyer
Simulated annealing in the microcanonical ensemble 5270
John R. Ray and Richard W. Harris
Self-organizing domain structure in a driven lattice gas 5275
György Szabó, Attila Szolnoki, Tibor Antal, and István Borsos
Method of constructing exactly solvable chaos 5280
Ken Umeno
Synchronization of chaos and hyperchaos using linear and nonlinear feedback functions 5285
M. K. Ali and Jin-Qing Fang
Effect of randomness and anisotropy on Turing patterns in reaction-diffusion systems 5291
Indrani Bose and Indranath Chaudhuri
Velocity distribution of topological defects in phase-ordering systems 5297
A. J. Bray
Fractal dimension and degree of order in sequential deposition of mixture 5302
M. K. Hassan
Exactly solvable maps of on-off intermittency 5311
Hiroki Hata and Syuji Miyazaki
Dynamics of globally coupled bistable elements 5315
D. H. Zanette
Interface dynamics in a mean-field lattice gas model: Solute trapping, kinetic coefficient, and interface mobility 5321
Mathis Plapp and Jean-François Gouyet
Nonstationary optimal paths and tails of prehistory probability density in multistable stochastic systems 5338
B. E. Vugmeister, J. Botina, and H. Rabitz
Time-dependent one-dimensional spin-1 Ising system with weak coupling 5343
Mustafa Keskin and Paul H. E. Meijer

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 55, NUMBER 5** **MAY 1997**

6Chaos and crises in more than two dimensions 5350
Pablo Moresco and Silvina Ponce Dawson
Dynamic scaling in a $(2+1)$-dimensional limited mobility model of epitaxial growth 5361
S. Das Sarma and P. Punyindu
Optimal Galerkin approximations of partial differential equations using principal interaction patterns 5365
F. Kwasniok
Numerical study of scars in a chaotic billiard 5376
Baowen Li
Random matrix theory and classical statistical mechanics: Vertex models 5380
H. Meyer, J.-C. Anglès d'Auriac, and J.-M. Maillard
Adaptive recognition and filtering of noise using wavelets 5393
S. Boccaletti, A. Giaquinta, and F. T. Arecchi
Extracting unstable periodic orbits from chaotic time series data 5398
Paul So, Edward Ott, Tim Sauer, Bruce J. Gluckman, Celso Grebogi, and Steven J. Schiff
Fractal and multifractal properties of exit times and Poincaré recurrences 5418
V. Afraimovich and G. M. Zaslavsky
Stability of the two- and three-dimensional kink solutions to the Cahn-Hilliard equation 5427
David Bettinson and George Rowlands
Statistical prediction of corrosion front penetration 5433
Terje Johnsen and Rudolf Hilfer
Discrimination power of measures for nonlinearity in a time series 5443
Thomas Schreiber and Andreas Schmitz

Classical fluids

Parametric forcing of waves with a nonmonotonic dispersion relation: Domain structures in ferrofluids 5448
David Raitt and Hermann Riecke
Symmetrization of the self-energy integral in the Yakhot-Orszag renormalization-group calculation 5455
Malay K. Nandy
Onset of intermittency in two-dimensional decaying turbulence 5458
Leslie M. Smith and Victor Yakhot
Nontrivial polydispersity exponents in aggregation models 5465
Stéphane Cueille and Clément Sire
Numerical simulations of experiments on quasi-two-dimensional turbulence 5479
B. Jüttner, D. Marteau, P. Tabeling, and A. Thess
Period-doubling cascade to chaotic phase dynamics in Taylor vortex flow with hourglass geometry 5489
Richard J. Wiener, Geoffrey L. Snyder, Micah P. Prange, Daniel Frediani, and Paul R. Diaz
Modeling and simulation of multilane traffic flow 5498
Dirk Helbing and Andreas Greiner
Noise sustained pattern growth: Bulk versus boundary effects 5509
M. Lücke and A. Szprynger
Constraints, metastability, and inherent structures in liquids 5522
D. S. Corti, P. G. Debenedetti, S. Sastry, and F. H. Stillinger
Simulations of atomic structure, dynamics, and self-diffusion in liquid Au 5535
Alexander Bogicevic, Lars B. Hansen, and Bengt I. Lundqvist
Coexisting attractors in compressible Rayleigh-Bénard flow 5546
V. M. Castillo, Wm. G. Hoover, and C. G. Hoover
Geometrical orbits in the power spectra of waves 5551
Stephen C. Creagh and Peter Dimon
Nonlinear growth dynamics of Langmuir monolayers limited by both surface and bulk diffusion 5564
Alexandre Valance and Chaouqi Misbah

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 55, NUMBER 5 MAY 1997

Dynamical scaling law in the development of drift wave turbulence 5575
Takeshi Watanabe, Hirokazu Fujisaka, and Takahiro Iwayama
Examination of phenomenological coefficient matrices within the canonical model of field theory of thermodynamics 5581
Katalin Gambár, Katalin Martinás, and Ferenc Márkus
Chaotic advection and transport in helical Beltrami flows: A Hamiltonian system with anomalous diffusion 5587
O. Agullo, A. D. Verga, and G. M. Zaslavsky
Metastable states in a microscopic model of traffic flow 5597
S. Krauss, P. Wagner, and C. Gawron

Liquid crystals

Stimulated orientational scattering and third-order nonlinear optical processes in nematic liquid crystals 5603
P. Etchegoin and R. T. Phillips
Molecular-statistical description of the smectic-*A*–smectic-*C* phase transition 5613
F. Gieβelmann and P. Zugenmaier
Viscosity coefficients near the nematic–smectic-*A* phase transition 5623
V. P. Romanov and S. V. Ul'yanov
Collective director modes at the transitions to hexatic ferroelectric liquid crystalline phases 5633
J. Schacht, F. Gieβelmann, P. Zugenmaier, and W. Kuczyński
Conformation-dependent dipoles of liquid crystal molecules and fragments from first principles 5641
C. J. Adam, S. J. Clark, G. J. Ackland, and J. Crain

PART B

Note to Reader i

Complex fluids, diffusion-limited aggregation, and dendritic growth

Directed polymer in random media in two dimensions: Numerical study of the aging dynamics 5651
A. Barrat
Microscopic model for FitzHugh-Nagumo dynamics 5657
Anatoly Malevanets and Raymond Kapral
Adsorption of linear polymers on impenetrable fractal boundaries of checkerboard fractal lattices 5671
Sava Milošević, Ivan Živić, and Vladimir Miljković
Surface-directed spinodal decomposition: Hydrodynamic effects 5680
Hao Chen and Amitabha Chakrabarti
Osmotic and activity coefficients from effective potentials for hydrated ions 5689
Alexander P. Lyubartsev and Aatto Laaksonen
Exact analytical description of tracer exchange and particle conversion in *single-file* systems 5697
Christian Rödenbeck, Jörg Kärger, and Karsten Hahn
Long-time behavior of the shear-stress autocorrelation function in two-dimensional colloidal fluids 5713
A. C. Brańka and D. M. Heyes
Concentration dependence of the low-shear viscosity of suspensions of hard-sphere colloids 5718
S. P. Meeker, W. C. K. Poon, and P. N. Pusey
Evidence for chain shrinkage in binary polymer blends: Light scattering experiments and theory 5723
W. Theobald, A. Sans-Penninckx, G. Meier, and T. A. Vilgis
Physics of isodesmic chemical equilibria in solution 5731
J. R. Henderson
Dense carrier gas effect in vapor phase nucleation 5743
Vladimir M. Novikov, Oleg V. Vasil'ev, and Howard Reiss
Phase diagram of a Gaussian random copolymer 5750
E. G. Timoshenko, Yu. A. Kuznetsov, and K. A. Dawson

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 55, NUMBER 5 MAY 1997

Propagation of a pressure step in a granular material: The role of wall friction 5759
T. Boutreux, E. Raphaël, and P. G. de Gennes
Stabilization of tilt order by chain flexibility in Langmuir monolayers 5774
F. Schmid
Numerical solutions of the variational equations for sandpile dynamics 5785
T. Elperin and A. Vikhansky
Interactions in mixtures of a microemulsion and a polymer 5792
K.-Q. Xia, Y.-B. Zhang, P. Tong, and C. Wu
Structural characteristics of fractal clusters grown during vapor-solid transformation 5796
Ji-Zhong Zhang, Xiao-Yan Ye, Xiao-Jun Yang, and Delu Liu
First-order rigidity on Cayley trees 5800
C. Moukarzel, P. M. Duxbury, and P. L. Leath
Microstructure-dependent viscosity in concentrated suspensions of soft spheres 5812
S. E. Paulin, Bruce J. Ackerson, and M. S. Wolfe
Cohesion and aggregation of flexible hard rods with an attractive interaction 5820
Richard P. Sear

Biological physics

Effect of pressure on the dimyristoylphosphatidylcholine bilayer main transition 5825
Boyan B. Bonev and Michael R. Morrow
Theoretical analysis of the formation of membrane microtubes on axially strained vesicles 5834
Bojan Božič, Saša Svetina, and Boštjan Žekš
Binding stability of a cross-linked drug: Calculation of an anticancer drug cisplatin-DNA complex 5843
Y. Z. Chen, Yong-li Zhang, and E. W. Prohofsky
Stimulus-dependent correlations in stochastic networks 5849
H. J. Kappen

Plasma physics

Dispersion function for plasmas with loss-cone distributions in an inhomogeneous magnetic field 5859
R. Gaelzer, R. S. Schneider, and L. F. Ziebell
Operator technique for calculating superconfiguration-averaged quantities of atoms in plasmas 5874
J. Oreg, A. Bar-Shalom, and M. Klapisch
Nonlinear drift-wave structures and their influence on particle transport 5883
V. Naulin and K. H. Spatschek
Linear modes in the rotating neutron star polar-cap electron-positron plasma 5894
U. A. Mofiz
Diffusion tensor in electron transport in gases in a radio-frequency field 5901
Kenji Maeda, Toshiaki Makabe, Nobuhiko Nakano, Svetlan Bzenić, and Zoran Lj. Petrović
Trapping of fast magnetoacoustic waves close to an *X* line in a toroidal system 5909
Daniela Farina and Roberto Pozzoli
Multiple autoresonance accelerations generated from a chaotic base 5915
Y. Gell and R. Nakach

Physics of beams

Vacuum beat wave acceleration 5924
B. Hafizi, A. Ting, E. Esarey, P. Sprangle, and J. Krall
Linear analysis of a multibeam cyclotron-resonance maser array 5934
M. Korol and E. Jerby

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 55, NUMBER 5 MAY 1997

Phase space control and consequences for cooling by using a laser-undulator beat wave 5948
Yasuaki Kishimoto, James K. Koga, Toshiki Tajima, and David L. Fisher
Ionization and pulse lethargy effects in inverse Cherenkov accelerators 5964
P. Sprangle, B. Hafizi, and R. F. Hubbard
Nonlinear dynamics of microwave instability in accelerators 5976
G. V. Stupakov, B. N. Breizman, and M. S. Pekker
Effect of fast velocity on the beam dynamics in a modified betatron accelerator 5985
Z. Xenidi, E. Drakakis, and C. A. Kapetanakos
Particle dynamics in storage rings with barrier rf systems 5992
S. Y. Lee and K. Y. Ng
Generation of ultrahigh harmonics with a two-stage free electron laser and a seed laser 6002
V. V. Goloviznin and P. W. van Amersfoort
Investigating the sensitivities of the photon beam line flux with a deforming electron beam orbit 6011
Ian C. Hsu

Classical physics, including nonlinear media

External boundaries and internal shear bands in granular convection 6016
James B. Knight
Soluble two-dimensional photonic-crystal model 6024
T. J. Shepherd, P. J. Roberts, and Rodney Loudon
Nonlinear Schrödinger equation and *N*-soliton interactions: Generalized Karpman-Solov'ev approach and the complex Toda chain 6039
V. S. Gerdjikov, I. M. Uzunov, E. G. Evstatiev, and G. L. Diankov
Propagation of an envelope soliton in a medium with spatially varying dispersion 6061
F. Kh. Abdullaev and J. G. Caputo
Fundamentals of the nonlinear theory of photorefractive subharmonics 6072
B. I. Sturman, Marìa Aguilar, F. Agullò-Lòpez, and K. H. Ringhofer
Fragmentation of thin films bonded to solid substrates: Simulations and a mean-field theory 6084
Kevin M. Crosby and R. Mark Bradley
Secondary dark rings of internal conical refraction 6092
Karl F. Warnick and David V. Arnold
Spontaneous emission of a continuum sine-Gordon kink in the presence of a spatially periodic potential 6097
C. R. Willis
Analysis of stability of light beams in nonlinear photorefractive media 6101
E. Infeld and T. Lenkowska-Czerwińska
Solitons in nonlinear fiber couplers with two orthogonal polarizations 6107
T. I. Lakoba, D. J. Kaup, and B. A. Malomed
Role of voids in granular convection 6121
Troy Shinbrot, D. V. Khakhar, J. J. McCarthy, and Julio M. Ottino
Solitons in coupled waveguides with quadratic nonlinearity 6134
William C. K. Mak, Boris A. Malomed, and P. L. Chu
Effects of nonlocal dispersive interactions on self-trapping excitations 6141
Yu. B. Gaididei, S. F. Mingaleev, P. L. Christiansen, and K. Ø. Rasmussen
Dynamics of nonlinear localized states on finite discrete chains 6151
K. Ø. Rasmussen, David Cai, A. R. Bishop, and Niels Grønbech-Jensen
Stability of temporal chirped solitary waves in quadratically nonlinear media 6155
C. Etrich, U. Peschel, F. Lederer, and B. A. Malomed

Computational physics

False-nearest-neighbors algorithm and noise-corrupted time series 6162
Carl Rhodes and Manfred Morari
Conformal mapping on rough boundaries. I. Applications to harmonic problems 6171
Damien Vandembroucq and Stéphane Roux
Conformal mapping on rough boundaries. II. Applications to biharmonic problems 6186
Damien Vandembroucq and Stéphane Roux
Hierarchical approach to diffusive flow in heterogeneous systems 6197
Yüksel Günal and P. B. Visscher
Released-phase quantum Monte Carlo method 6202
Matthew D. Jones, Gerardo Ortiz, and David M. Ceperley
Parallel algorithm and dynamic exponent for diffusion-limited aggregation 6211
K. Moriarty, J. Machta, and R. Greenlaw
Bayesian method for global optimization 6219
Prasana K. Venkatesh, Morrel H. Cohen, Robert W. Carr, and Anthony M. Dean

BRIEF REPORTS

Random walks on disordered networks 6233
Tomaso Aste
Migration control in two coupled Duffing oscillators 6237
S. Paul Raj and S. Rajasekar
Manifestation of quantum chaos based on construction of an alternative method 6241
Jun Ma, Xiao-shu Jiang, and Ren-kuan Yuan
Universality of random knotting 6245
Tetsuo Deguchi and Kyoichi Tsurusaki
Effect of boundary conditions on scaling in the ''game of Life'' 6249
Hendrik J. Blok and Birger Bergersen
Renormalized field theory of the Gribov process with quenched disorder 6253
H. K. Janssen
Microscopic theory of nonisothermal Brownian motion 6257
Alec Maassen van den Brink and H. Dekker
Transition to deterministic chaos in a periodically driven quantum system and breaking of the time-reversal symmetry 6260
U. Schwengelbeck and F. H. M. Faisal
Mean-field theory of hot sandpiles 6264
Maxim Vergeles
Relation between stochastic resonance and synchronization of passages in a double-well system 6266
Mangal C. Mahato and A. M. Jayannavar
Amplitude equations for isothermal double diffusive convection 6270
R. Becerril and J. B. Swift
Multifractality of quasihomogeneous states 6274
A. Bershadskii
Hydrodynamic equations for one-dimensional systems of inelastic particles 6277
C. Vamoş, N. Suciu, and A. Georgescu
Kinetics of size segregation in quasi-two-dimensional nearly-hard-sphere mixtures 6281
Erik K. Hobbie
Fluctuations of the proton-electromotive force across the inner mitochondrial membrane 6285
Joaquim Procopio and José A. Fornés
