THIRD SERIES, VOLUME 56, NUMBER 1
PARTS A AND B

CONTENTS

JULY 1997

The Table of Contents is a total listing of Parts A and B.
Part A consists of pages 1–530, and Part B pages 531–1290.

PART A

Guidelines for PRE Section Selection iii
Editorial Policies and Procedures of Physical Review E v
General Information for Contributors ix
Guidelines for Estimating Length xiii
Note to Reader xiv

RAPID COMMUNICATIONS

Disordered waves in an excitable medium consisting of two layers: Catalytic gel and noncatalytic solution R1
Mario Markus, Torsten Schulte, and André Czajka
Scaling and river networks: A Landau theory for erosion R5
E. Somfai and L. M. Sander
Linear response theory applied to stochastic resonance in models of ensembles of oscillators R9
Alexander Neiman, Lutz Schimansky-Geier, and Frank Moss
Interior Dirichlet eigenvalue problem, exterior Neumann scattering problem, and boundary element method for quantum billiards R13
Shuichi Tasaki, Takahisa Harayama, and Akira Shudo
Dynamics of relaxing systems subjected to nonlinear interactions R17
Kwok Yeung Tsang and K. L. Ngai
Nucleation and growth: Decay of a metastable state R21
Celeste Sagui, Dean Stinson O'Gorman, and Martin Grant
Non-Markovian persistence and nonequilibrium critical dynamics R25
Klaus Oerding, Stephen J. Cornell, and Alan J. Bray
Effect of temperature on biased random walks in disordered media R29
Eleni Arapaki, Panos Argyrakis, Isaak Avramov, and Andrey Milchev
Effect of the output of the system in signal detection R32
J. M. G. Vilar and J. M. Rubí
Three-dimensional curved flames: Stationary flames in cylindrical tubes R36
V. V. Bychkov, A. I. Kleev, M. A. Liberman, and S. M. Golberg
Experimental measurement of the persistence exponent of the planar Ising model R40
B. Yurke, A. N. Pargellis, S. N. Majumdar, and C. Sire
Sign inversion of liquid-crystal-induced circular dichroism observed in the smectic-*A* and chiral smectic-C_α phases of binary mixture systems R43
Kenko Yamada, Yoichi Takanishi, Ken Ishikawa, Hideo Takezoe, Atsuo Fukuda, and Mikhail A. Osipov
Renormalization of fluctuating tilted hexatic membranes R47
Jeong-Man Park
Anomalous cross-link density dependence of scattering from charged gels R51
Fumiyoshi Ikkai and Mitsuhiro Shibayama
Coexistence and phase separation in sheared complex fluids R55
Peter D. Olmsted and C.-Y. D. Lu

(Continued)

1063-651X(199707)56:1:A;1-F

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 1 JULY 1997

Soft-mode suppression in the phase separation of binary polymer mixtures driven by a reversible chemical reaction R59
Qui Tran-Cong, Takashi Ohta, and Osamu Urakawa
Adsorption of fluids in confined disordered media from inhomogeneous replica Ornstein-Zernike equations R63
Orest Pizio and Stefan Sokolowski
Relation between the phase separation and the crystallization in protein solutions R67
Shinpei Tanaka, Masahiko Yamamoto, Kohzo Ito, Reinosuke Hayakawa, and Mitsuo Ataka
Collisional radiative model for heavy atoms in hot non-local-thermodynamical-equilibrium plasmas R70
A. Bar-Shalom, J. Oreg, and M. Klapisch
Vibrational modes in the dust-plasma crystal R74
S. V. Vladimirov, P. V. Shevchenko, and N. F. Cramer

ARTICLES

General methods of statistical physics

Soluble phase field model 77
Umberto Marini Bettolo Marconi, Andrea Crisanti, and Giulia Iori
Numerical crisis found in the fixed step integration of a photoconductor model 88
Alicia Serfaty de Markus
Damage spreading in the Ising model 94
Haye Hinrichsen and Eytan Domany
Globally and randomly coupled Ginzburg-Landau maps 99
Satoki Uchiyama and Hirokazu Fujisaka
Lévy dusts, Mittag-Leffler statistics, mass fractal lacunarity, and perceived dimension 112
Raphael Blumenfeld and Benoit B. Mandelbrot
Fluctuation properties of strength function phenomena: A model study 119
Hirokazu Aiba, Shoujirou Mizutori, and Toru Suzuki
Universality for interacting oriented self-avoiding walk: A transfer matrix calculation 131
A. Trovato and F. Seno
Modified effective-field approach to low-dimensional spin-1/2 systems 144
G. Kamieniarz, R. Dekeyser, G. Musiał, L. Dębski, and M. Bieliński
Wound-up phase turbulence in the complex Ginzburg-Landau equation 151
R. Montagne, E. Hernández-García, A. Amengual, and M. San Miguel
Control of chaos in conservative flows 168
Liu Zonghua and Chen Shigang
Renormalization group calculation of distribution functions: Structural properties for percolation clusters 172
J.-P. Hovi and Amnon Aharony
Self-replicating spots in reaction-diffusion systems 185
William N. Reynolds, Silvina Ponce-Dawson, and John E. Pearson
Correlation dimension of intermittent signals 199
Rainer Hegger, Holger Kantz, and Eckehard Olbrich
Karhunen-Loeve mode control of chaos in a reaction-diffusion process 204
Ioana Triandaf and Ira B. Schwartz
Curvature tensor of a statistical manifold associated with a correlated-walk model 213
Tsunehiro Obata, Hiroshi Oshima, and Hiroaki Hara
Structure functions in the stochastic Burgers equation 227
F. Hayot and C. Jayaprakash
Universality classes for rice-pile models 231
Luís A. Nunes Amaral and Kent Bækgaard Lauritsen
Parameter sensitivity of noisy chaotic time series 235
Elmer S. Hung

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 56, NUMBER 1** **JULY 1997**

Controlling turbulence in coupled map lattice systems using feedback techniques 239
P. Parmananda, M. Hildebrand, and M. Eiswirth
Power-law sensitivity to initial conditions within a logisticlike family of maps: Fractality and nonextensivity 245
U. M. S. Costa, M. L. Lyra, A. R. Plastino, and C. Tsallis
Efficient signal transmission by synchronization through compound chaotic signal 251
K. Murali and M. Lakshmanan
''Chirped'' Van der Pol oscillator 256
Baruch Meerson and Guy I. Shinar
Lyapunov exponents and coalescence of chaotic trajectories 259
L. Longa, S. P. Dias, and E. M. F. Curado
Extension of level-spacing universality 264
E. Brézin and S. Hikami
Coherence resonance at noisy precursors of bifurcations in nonlinear dynamical systems 270
Alexander Neiman, Peter I. Saparin, and Lewi Stone
Influence of Gaussian noise on the correlation exponent 274
Thomas Schreiber
Calculation of eigenvalues of a strongly chaotic system using Gaussian wave-packet dynamics 278
Arjendu K. Pattanayak and William C. Schieve
Local formulation of the first law and the second law of thermodynamics for a nonequilibrium system 285
M. Chen
Traveling density wave models for earthquakes and driven threshold systems 293
John B. Rundle, W. Klein, Susanna Gross, and C. D. Ferguson
Drifting spatial structures in a system with oppositely driven species 308
K.-t. Leung and R. K. P. Zia
Statistical test for dynamical nonstationarity in observed time-series data 316
Matthew B. Kennel
Universal formulas for percolation thresholds. II. Extension to anisotropic and aperiodic lattices 322
Serge Galam and Alain Mauger
Fluctuations of spatial patterns as a measure of classical chaos 326
Zhen Cao and Rudolph C. Hwa
Coherences and populations in the driven damped two-state system 334
Milena Grifoni, Manfred Winterstetter, and Ulrich Weiss
Finding periodic points from short time series 346
Stuart Allie and Alistair Mees
Quantum chaos in the atomic gravitational cavity 351
Wen-Yu Chen and G. J. Milburn
Extended universality of the surface curvature in equilibrium crystal shapes 355
Jae Dong Noh and Doochul Kim
Effects of three-body (Axilrod-Teller) forces on the classical and quantum behavior of rare-gas trimers 363
Charusita Chakravarty, Robert J. Hinde, David M. Leitner, and David J. Wales
Periodic orbits and the homoclinic tangle in atom-surface chaotic scattering 378
R. Guantes, F. Borondo, and S. Miret-Artés

Classical fluids

Statistical description of acoustic turbulence 390
V. S. L'vov, Yu. L'vov, A. C. Newell, and V. Zakharov
Perturbative and nonperturbative analysis of the third-order zero modes in the Kraichnan model for turbulent advection 406
Omri Gat, Victor S. L'vov, and Itamar Procaccia

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 1 JULY 1997

Intermittency and anomalous scaling for magnetic fluctuations 417
I. Rogachevskii and N. Kleeorin
Energy injection in closed turbulent flows: Stirring through boundary layers versus inertial stirring 427
O. Cadot, Y. Couder, A. Daerr, S. Douady, and A. Tsinober
Lattice Boltzmann method on a curvilinear coordinate system: Vortex shedding behind a circular cylinder 434
Xiaoyi He and Gary D. Doolen
Scaling behavior of velocity and temperature in a shell model for thermal convective turbulence 441
Jiang Mingshun and Liu Shida
Non-Gaussian behavior of low-order moments in fully developed turbulence 447
Samuel I. Vainshtein
Temperature maxima in stable two-dimensional shock waves 462
Oyeon Kum, Wm. G. Hoover, and C. G. Hoover
Corresponding-states principle for two-dimensional hard models of molecular fluids 466
M. J. Maeso and J. R. Solana
Viscous effects in droplet-ejecting capillary waves 472
Christopher L. Goodridge, W. Tao Shi, H. G. E. Hentschel, and Daniel P. Lathrop
Microscopic study of steady convective flow in periodic systems 476
David R. J. Monaghan and Gary P. Morriss
Dilute gas Couette flow: Theory and molecular dynamics simulation 489
Dino Risso and Patricio Cordero
Structure of a hard-sphere fluid in hard wedges 499
M. Schoen and S. Dietrich
Generic weakly nonlinear model equations for density waves in two-phase flows 511
Ooshida T. and Takuji Kawahara
Linear Bénard-Marangoni instability in rigid circular containers 520
P. C. Dauby, G. Lebon, and E. Bouhy

PART B

Note to Reader i

Liquid crystals

Helix configurations in chiral hexatic liquid crystals 531
P. Schiller and F. Zeitler
Molecular structure and electronic properties of the quasi-one-dimensional discotic liquid crystal conductors hexakis (*n*-alkoxy) triphenylene 538
P. Etchegoin
Dynamic light scattering in polymer-dispersed liquid crystals 549
A. Mertelj, L. Spindler, and M. Čopič
Liquid crystalline behavior of octylcyanobiphenyl confined to submicron-size randomly connected porous glasses 554
Germano S. Iannacchione, Sihai Qian, Daniele Finotello, and Fouad M. Aliev
Ferroelectric and dipolar glass phases of noncrystalline systems 562
G. Ayton, M. J. P. Gingras, and G. N. Patey
Subsurface deformations in nematic liquid crystals: The hexagonal lattice approach 571
G. Skačej, V. M. Pergamenshchik, A. L. Alexe-Ionescu, G. Barbero, and S. Žumer
Phase-matched optical second-harmonic generation in helically twisted smectic-*C* phase 581
I. Drevenšek Olenik and M. Čopič
Electron-diffraction study of a one-layer free-standing hexatic liquid-crystal film 592
Chia-Fu Chou, John T. Ho, and S. W. Hui

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 1 JULY 1997

Electro-optical study of nematic elastomer gels 595
C.-C. Chang, L.-C. Chien, and R. B. Meyer
Microdomain texture produced for an analog gray-scale technique using ferroelectric liquid crystals containing nanometer-scale particles 600
Eriko Matsui and Akio Yasuda

Complex fluids, diffusion-limited aggregation, and dendritic growth

Synchrotron x-ray-scattering studies on the sodium dodecyl sulfate–water–pentanol–dodecane L_3 sponge phase . . 608
Ning Lei, C. R. Safinya, D. Roux, and K. S. Liang
Energy conversion in ferrofluids: Magnetic nanoparticles as motors or generators 614
F. Gazeau, C. Baravian, J.-C. Bacri, R. Perzynski, and M. I. Shliomis
Sine-Gordon mean-field theory of a Coulomb gas 619
Alexandre Diehl, Marcia C. Barbosa, and Yan Levin
Friction in strongly confined polymer melts: Effect of polymer bridges 623
A. Subbotin, A. Semenov, and M. Doi
Anomalous diffusion of ideal polymer networks 631
P. Licinio and A. V. Teixeira
Traveling pulses in anisotropic oscillatory media with global coupling 635
M. Falcke and H. Engel
Low-energy suspension structure of a magnetorheological fluid 642
Joanne H. E. Promislow and Alice P. Gast
Overall properties of planar quasisymmetric randomly inhomogeneous media: Estimates and cell models 652
Pham Duc Chinh
Effect of chain length on the heat-capacity anomaly at the gel to liquid-crystalline phase transition in unilamellar vesicles of phosphatidylcholines 661
Koji Uchida, Haruhiko Yao, and Kenji Ema
Out-of-plane phase segregation and in-plane clustering in a binary mixture of amphiphiles at the air-water interface 667
Debashish Chowdhury, Prabal K. Maiti, S. Sabhapandit, and P. Taneja
Swelling of a polymer brush probed with a quartz crystal resonator 680
Arno Domack, Oswald Prucker, Jürgen Rühe, and Diethelm Johannsmann
Orientational correlations and spin relaxation in lamellar fluid membrane phases 690
Bertil Halle and Stefan Gustafsson
Reaction diffusion with initially separated reactants: Functional integral approach 708
Victor Malyutin, Savely Rabinovich, and Shlomo Havlin
Characterization of long-range correlations in complex distributions and profiles 712
Ali Reza Mehrabi, Hossein Rassamdana, and Muhammad Sahimi
Phenomenological model for cross-linked polymer blends 723
M. S. O. Massunaga, M. Paniconi, and Y. Oono
Information content of multitime correlation functions for the interpretation of structural relaxation in glass-forming systems 730
Andreas Heuer
Glass transition of polymers: Memory effects in structural relaxation of polystyrene 741
S. C. Kuebler, A. Heuer, and H. W. Spiess
Microphase separation transition of random copolymers in a random media 750
Andrey V. Dobrynin
Phase-separation kinetics in a model with order-parameter-dependent mobility 758
Sanjay Puri, Alan J. Bray, and Joel L. Lebowitz
Liquid-glass transition phase diagram for concentrated charge-stabilized colloids 766
S. K. Lai, W. J. Ma, W. van Megen, and I. K. Snook

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 1 JULY 1997

Partial integration and local mean-field approach for a vector lattice model of microemulsions 770
C. Buzano, L. R. Evangelista, and A. Pelizzola
Experimental determination of the stability diagram of a lamellar eutectic growth front 780
Marie Ginibre, Silvère Akamatsu, and Gabriel Faivre
Pinning and sliding of tethered monolayers on disordered substrates 797
Carlo Carraro and David R. Nelson
Coherent dynamic structure factor of orthoterphenyl around the mode coupling crossover temperature T_c 809
A. Tölle, H. Schober, J. Wuttke, and F. Fujara
Mesoscopic phase separation dynamics of compressible copolymer melts 816
N. M. Maurits, B. A. C. van Vlimmeren, and J. G. E. M. Fraaije

Biological physics

Propagation and stability of waves of electrical activity in the cerebral cortex 826
P. A. Robinson, C. J. Rennie, and J. J. Wright
Dynamical mechanisms for biological evolution 841
J. Fernandez and A. Plastino
Periodicity of base correlation in nucleotide sequence 848
Weijiang Lee and Liaofu Luo
Voltage dynamics of single-type voltage-gated ion-channel protein ensembles 852
Hanna Salman and Erez Braun
Fractional populations of blood groups 865
Myung-Hoon Chung, Seung Pyo Lee, Chul Koo Kim, and Kyun Nahm
Domain sizes of the Gardner volume for the Ising reversed wedge perceptron 870
G. J. Bex and C. Van den Broeck
Solitons in an isolated helix chain 877
P. L. Christiansen, A. V. Zolotaryuk, and A. V. Savin
Maximum hyperchaos in chaotic nonmonotonic neuronal networks 890
J. W. Shuai, Z. X. Chen, R. T. Liu, and B. X. Wu
Davydov model: The quantum, mixed quantum-classical, and full classical systems 894
Leonor Cruzeiro-Hansson and Shozo Takeno
Dynamics of on-line learning in radial basis function networks 907
Jason A. S. Freeman and David Saad
General random walk model of ATP-driven helicase translocation along DNA 919
Y. Z. Chen, Dong Mi, He-Shang Song, and Xian-Ju Wang
Noise-mediated enhancements and decrements in human tactile sensation 923
J. J. Collins, Thomas T. Imhoff, and Peter Grigg
Adiabatic ansatz in RNA folding dynamics 927
Ariel Fernández, Gustavo A. Appignanesi, and A. Montani
Dynamics of neural networks relevant to properties of proteins 931
Larry S. Liebovitch and Michał Żochowski

Plasma physics

Comparison of the semiclassical and modified semiempirical method of spectral calculation 936
D. J. Heading, J. S. Wark, R. W. Lee, R. Stamm, and B. Talin
Role of core losses in drift-vortex interactions 947
E. Westerhof, J. Rem, and T. J. Schep
Ohm's law for plasmas in reversed field pinch configuration 957
E. Martines and F. Vallone
Spatial structure and time evolution of the Weibel instability in collisionless inhomogeneous plasmas 963
F. Califano, F. Pegoraro, and S. V. Bulanov

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 1 JULY 1997

Correlated ion stopping in plasmas 970
Günter Zwicknagel and Claude Deutsch
Large anisotropy of the electron distribution function in the high-density plasma produced by an ultrashort-pulse UV laser 988
Hitoki Yoneda, Noboru Hasegawa, Shu-ichi Kawana, and Ken-ichi Ueda
Picosecond time-resolved spectroscopy of a controlled preformed plasma heated by an intense subpicosecond laser pulse 992
C. Y. Côté, J. C. Kieffer, and O. Peyrusse
Dynamic model of the radio-frequency plasma sheath in a highly asymmetric discharge cell 1001
M. A. Sobolewski
Bounds on the mobility of electrons in weakly ionized plasmas 1012
A. Rokhlenko and Joel L. Lebowitz
Optical probing of laser-induced indirectly driven shock waves in aluminum 1019
M. Basko, Th. Löwer, V. N. Kondrashov, A. Kendl, R. Sigel, and J. Meyer-ter-Vehn
Sideward stimulated Raman scattering of a short laser pulse in a plasma channel 1032
C. J. McKinstrie, A. V. Kanaev, and E. J. Turano

Classical physics, including nonlinear media

Nucleation rate of kink-antikink pairs in a driven and overdamped deformable chain 1037
David Yemélé and Timoléon C. Kofané
Bloch wave theory of modulational polarization instabilities in birefringent optical fibers 1048
Stefano Trillo and Stefan Wabnitz
Size segregation in vibrated granular systems: A reversible process 1059
D. Brone and F. J. Muzzio
Painlevé analysis and bright solitary waves of the higher-order nonlinear Schrödinger equation containing third-order dispersion and self-steepening term 1064
D. Mihalache, N. Truta, and L.-C. Crasovan
Crack limiting velocity 1071
Brad Lee Holian and Robb Thomson
Spatiotemporal soliton propagation in saturating nonlinear optical media 1080
V. Skarka, V. I. Berezhiani, and R. Miklaszewski
Propagation of solitons in hydrogen-bonded chains with mass variation 1088
G. Kalosakas, A. V. Zolotaryuk, G. P. Tsironis, and E. N. Economou
Theory of sound amplification by stimulated emission of radiation with consideration for coagulation 1097
I. V. Volkov, S. T. Zavtrak, and I. S. Kuten
General vector basis function solution of Maxwell's equations 1102
Dipankar Sarkar and N. J. Halas
Bistable and tristable soliton switching in collinear arrays of linearly coupled waveguides 1113
Alejandro B. Aceves and Marco Santagiustina
Optical activity and spatial dispersion 1124
Angelo Morro
Polarization matrix and geometric phase 1129
Dipti Banerjee
Solution of the time-dependent Boltzmann equation 1135
J. C. J. Paasschens
Effective dipole potentials after angle averaging 1142
S. J. Miklavcic

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 1 JULY 1997

Nonlinear conformally invariant generalization of the Poisson equation to $D>2$ dimensions 1148
Mordehai Milgrom

Computational physics

Influence of noise on power-law scaling functions and an algorithm for dimension estimations 1160
Hans Oltmans and Peter J. T. Verheijen
Evolutionary strategies of optimization 1171
Torsten Asselmeyer, Werner Ebeling, and Helge Rosé
Degenerate Rosenbluth Monte Carlo scheme for cluster counting and lattice animal enumeration 1181
C. M. Care
Time structure of chaotic attractors: A graphical view 1188
P. Maurer, Hai-Da Wang, and A. Babloyantz
Numerical method for the nonlinear Fokker-Planck equation 1197
D. S. Zhang, G. W. Wei, D. J. Kouri, and D. K. Hoffman
Nonlinear response for nonautonomous systems 1207
Janka Petravic and Denis J. Evans
Particle simulation of three-dimensional convection patterns in a Rayleigh-Bénard system 1218
Tadashi Watanabe and Hideo Kaburaki
Calculating the linear response functions of noninteracting electrons with a time-dependent Schrödinger equation 1222
Toshiaki Iitaka, Shintaro Nomura, Hideki Hirayama, Xinwei Zhao, Yoshinobu Aoyagi, and Takuo Sugano

BRIEF REPORTS

Wave propagator via quantum fluid dynamics 1230
Antônio B. Nassar, J. M. F. Bassalo, P. T. S. Alencar, L. S. G. Cancela, and M. Cattani
Nonequilibrium phase transition in the kinetic Ising model: Divergences of fluctuations and responses near the transition point 1234
Muktish Acharyya
Controlling spatiotemporal chaos in coupled nonlinear oscillators 1238
Ljupčo Kocarev, Ulrich Parlitz, Toni Stojanovski, and Predrag Janjić
Tracking of synchronized chaotic systems with applications to communications 1242
Naresh Sharma and P. G. Poonacha
Short-time dynamics of correlated many-particle systems: Molecular dynamics versus quantum kinetics 1246
M. Bonitz, D. Semkat, and D. Kremp
Confined Turing patterns in growing systems 1250
C. Varea, J. L. Aragón, and R. A. Barrio
Static and dynamic aspects of the rms local slope of growing random surfaces 1254
George Palasantzas
Self-diffusion coefficients of charged particles: Prediction of nonlinear volume fraction dependence 1258
M. Watzlawek and G. Nägele
Stochastic Manhattan learning: Time-evolution operator for the ensemble dynamics 1262
Todd K. Leen and John E. Moody
Penalty function approach to recurrent neural network dynamics 1266
Edoardo Milotti
Shielding of dust grains at the edge of an equilibrium plasma 1270
Huaqiang Luo and M. Y. Yu
