RAPID COMMUNICATIONS

General methods of statistical physics

Nonuniversality of weak synchronization in chaotic systems R3741
Maria de Sousa Vieira and Allan J. Lichtenberg

Avalanches and waves in the Abelian sandpile model R3745
Maya Paczuski and Stefan Boettcher

Real-time experimental control of a system in its chaotic and nonchaotic regimes R3749
David J. Christini, Visarath In, Mark L. Spano, William L. Ditto, and James J. Collins

Classical fluids

Temperature fluctuation properties in sodium convection R3753
S. Cioni, S. Horanyi, L. Krebs, and U. Müller

Boundary-layer analysis of a spiral wave core: Spiral core radius and conditions for the tip separation from the core boundary R3757
J. M. Starobin, C. F. Starmer, and A. J. Starobin

Morphology of spinodal decomposition R3761
Klaus R. Mecke and Victor Sofonea

Worm structure in the modified Swift-Hohenberg equation for electroconvection R3765
Yuhai Tu

Liquid crystals

Effects of surface topography on formation of defects in Sm*C* devices explained using an alternative chevron description R3769
P. Watson, P. J. Bos, and J. Pirs

Complex fluids, diffusion-limited aggregation, and dendritic growth

Dynamics of star polymers: Evidence for a structural glass transition R3772
J. Stellbrink, J. Allgaier, and D. Richter

Biological physics

Adhesion-induced vesicle propulsion R3776
Isabelle Durand, Petra Jönson, Chaouqi Misbah, Alexandre Valance, and Klaus Kassner

Physics of beams

Comparison of electron bunch asymmetry as measured by energy analysis and coherent transition radiation R3780
Gi. Schneider, M. G. Billing, R. Lai, and A. J. Sievers

Classical physics, including nonlinear media

Stability of an optical soliton with Gaussian tails R3784
Sergei K. Turitsyn

(Continued)

1063-651X(199710)56:4;1-2

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 4 OCTOBER 1997

ARTICLES

General methods of statistical physics

Domain statistics in coarsening systems 3788
P. L. Krapivsky and E. Ben-Naim
Synchronization and desynchronization of weakly coupled oscillators 3799
Christian Kurrer
Resonant Hopf triads in a delayed optical pattern-forming system 3803
Yu. A. Logvin and N. A. Loiko
Number of limit cycles of the Liénard equation 3809
Hector Giacomini and Sébastien Neukirch
Dynamical chaos in a minimum system of truncated Euler equations 3814
Eugene Levich, Boris A. Malomed, Rossella Monti, Leonid Shtilman, and David Tsibelman
Slowly divergent drift in the field-driven Lorentz gas 3822
P. L. Krapivsky and S. Redner
Lenz-Ising-Onsager problem in an external field as a soluble problem of many fermions 3831
Martin S. Kochmański
Noise-induced phase transition in soft Ising spins with a fluctuating interaction 3850
Seunghwan Kim, Seon Hee Park, and C. S. Ryu
Learning control algorithm for nonlinear maps 3854
Jair Botina and Herschel Rabitz
Quantitative study of scars in the boundary section of the stadium billiard 3859
Fernando P. Simonotti, Eduardo Vergini, and Marcos Saraceno
Stabilization of spatiotemporally chaotic semiconductor laser arrays by means of delayed optical feedback 3868
M. Münkel, F. Kaiser, and O. Hess
Phase transitions in stochastic self-organizing maps 3876
Thore Graepel, Matthias Burger, and Klaus Obermayer
Kramers-Kronig relations with logarithmic kernel and application to the phase spectrum in the Drude model 3891
M. Howard Lee and O. I. Sindoni
Scaling laws for noise-induced temporal riddling in chaotic systems 3897
Ying-Cheng Lai
Polylogarithms and Riemann's ζ function 3909
M. Howard Lee
Reaction-diffusion equations on a sphere: Meandering of spiral waves 3913
Jagannathan Gomatam and Faridon Amdjadi
Density-matrix renormalization group for the Berezinskii-Kosterlitz-Thouless transition of the 19-vertex model 3920
Yasushi Honda and Tsuyoshi Horiguchi
Minimum Kullback entropy approach to the Fokker-Planck equation 3927
A. R. Plastino, H. G. Miller, and A. Plastino
Families of graphs with $W_r(\{G\},q)$ functions that are nonanalytic at $1/q=0$ 3935
Robert Shrock and Shan-Ho Tsai
Random neighbor theory of the Olami-Feder-Christensen earthquake model 3944
Hans-Martin Bröker and Peter Grassberger
Mean-field analysis and Monte Carlo study of an interacting two-species reaction model 3953
K. S. Brown, K. E. Bassler, and D. A. Browne
Thermodynamics of phase equilibrium in nonuniform fields 3959
V. S. Vorob'ev and S. P. Malyshenko
Symmetric white noise can induce directed current in ratchets 3968
J. Łuczka, T. Czernik, and P. Hänggi

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 56, NUMBER 4** **OCTOBER 1997**

Ratchet motion induced by deterministic and correlated stochastic forces 3976
T. E. Dialynas, Katja Lindenberg, and G. P. Tsironis
Dynamics of low-dimensional dipolar systems 3986
J. M. Sun and Weili Luo
Superroughening versus intrinsic anomalous scaling of surfaces 3993
Juan M. López, Miguel A. Rodríguez, and Rodolfo Cuerno
Lattice statistics in three dimensions: Solution of layered dimer and layered domain wall models 3999
V. Popkov, Doochul Kim, H. Y. Huang, and F. Y. Wu
Stability of synchronous chaos and on-off intermittency in coupled map lattices 4009
Mingzhou Ding and Weiming Yang
Nonlinear diffusion control of spatiotemporal chaos in the complex Ginzburg-Landau equation 4017
Raúl Montagne and Pere Colet
Dynamical phase diagram of the dc-driven underdamped Frenkel-Kontorova chain 4025
Maxim Paliy, Oleg Braun, Thierry Dauxois, and Bambi Hu
Periodic-orbit theory of the blowout bifurcation 4031
Yoshihiko Nagai and Ying-Cheng Lai
Formation of nick instabilities due to particle clustering along crystal interfaces 4042
N. Vandewalle, M. Ausloos, and R. Cloots
Stochastic ratchets with colored thermal noise 4048
Laura Ibarra-Bracamontes and Víctor Romero-Rochín
Information content of signals using correlation function expansions of the entropy 4052
Phil Attard, Owen G. Jepps, and Stjepan Marčelja
Analysis of synchronization of chaotic systems by noise: An experimental study 4068
E. Sánchez, M. A. Matías, and V. Pérez-Muñuzuri
Structure factors and their distributions in driven two-species models 4072
G. Korniss and B. Schmittmann
Conserved growth model with a restricted solid-on-solid condition in higher dimensions 4085
S. H. Yook, J. M. Kim, and Yup Kim
Relativistic nonlinear dynamics of a driven constant-period oscillator 4090
Seung-Woo Lee, Jung-Hoon Kim, and Hai-Woong Lee
Time-structure invariance criteria for closure approximations 4097
Brian J. Edwards and Hans Christian Öttinger
Cellular automata models of single-lane traffic 4104
Márton Sasvári and János Kertész
Lower bounds and series for the ground-state entropy of the Potts antiferromagnet on Archimedean lattices and their duals 4111
Robert Shrock and Shan-Ho Tsai
Chaotic dynamics in an elastic medium with surface disorder 4125
S.-Z. Zhang, E. Louis, E. Cuevas, and J. A. Vergés
Front form and velocity in a one-dimensional autocatalytic $A+B\rightarrow 2A$ reaction 4130
J. Mai, I. M. Sokolov, V. N. Kuzovkov, and A. Blumen

Classical fluids

Thermal conductivity of water: Molecular dynamics and generalized hydrodynamics results 4135
Davide Bertolini and Alessandro Tani
Chaotic thermovibrational flow in a laterally heated cavity 4152
Arnaud Lizée and J. Iwan D. Alexander
Breaking waves: Bifurcations leading to a singular wave state 4157
W. Tao Shi, Christopher L. Goodridge, and Daniel P. Lathrop

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 56, NUMBER 4** **OCTOBER 1997**

Pattern dynamics in rotating convection at finite Prandtl number 4162
Y. Ponty, T. Passot, and P. L. Sulem
Statistical mechanics of monatomic liquids 4179
Duane C. Wallace
Convective, absolute, and global instabilities of thermocapillary-buoyancy convection in extended layers 4187
Jānis Priede and Gunter Gerbeth
Asymptotic theory of traffic jams 4200
B. S. Kerner, S. L. Klenov, and P. Konhäuser
Gaussian statistics of the hard-sphere fluid 4217
Gavin E. Crooks and David Chandler
Robust symmetric patterns in the Faraday experiment 4222
R. A. Barrio, J. L. Aragón, C. Varea, M. Torres, I. Jiménez, and F. Montero de Espinosa
Molecular-dynamics study of incoherent quasielastic neutron-scattering spectra of supercooled water 4231
S.-H. Chen, P. Gallo, F. Sciortino, and P. Tartaglia
Tracer dispersion in three-dimensional multipole flows 4244
Ming Zhang and Joel Koplik
From scaling to multiscaling in the stochastic Burgers equation 4259
F. Hayot and C. Jayaprakash
Translational invariance in turbulent cascade models 4263
Martin Greiner, Jens Giesemann, and Peter Lipa

Liquid crystals

Evolution criterion in nonequilibrium and a variational principle for equilibrium states of free-standing liquid crystalline films 4275
Christina Papenfuss and Wolfgang Muschik
Corresponding states of periodic structures in nematic liquid crystals 4282
A. J. Palangana, M. Simões, L. R. Evangelista, and A. A. Arrotéia
Scattering of light from small nematic spheres with radial dielectric anisotropy 4286
Huseyin Karacali, Steven M. Risser, and Kim F. Ferris
Azimuthal anchoring of liquid crystals on surfaces with high symmetry 4294
P. C. Schuddeboom and B. Jérôme
Computer simulation studies of confined liquid-crystal films 4306
Greg D. Wall and Douglas J. Cleaver

Complex fluids, diffusion-limited aggregation, and dendritic growth

Modified diffusion-limited aggregation simulation of electrodeposition in two dimensions 4317
Susan C. Hill and J. Iwan D. Alexander
Structures of an electrorheological fluid 4328
G. L. Gulley and R. Tao
Influence of cluster morphology on calculation of the aggregation rate constant in mesoscopic systems 4337
A. Fernández-Barbero, A. Schmitt, M. A. Cabrerizo-Vílchez, R. Martínez-García, and R. Hidalgo-Álvarez
Solvent effects on polymer conformation: Density-functional-theory approach 4344
Takuji Takahashi and Toyonori Munakata
Phases in strongly coupled electronic bilayer liquids 4351
V. I. Valtchinov, G. Kalman, and K. B. Blagoev
Dynamic percolation in fluorinated water-in-oil microemulsions 4356
Cecilia M. C. Gambi, M. Grazia Giri, Marcello Carlà, Donatella Senatra, and Alba Chittofrati
Dynamic fracture of disordered viscoelastic solids 4364
P. Heino and K. Kaski

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 4 OCTOBER 1997

Lévy walks of strong adsorbates on surfaces: Computer simulation and spin-lattice relaxation 4371
R. Valiullin, R. Kimmich, and N. Fatkullin
Power spectra of flow in an hourglass 4376
C. T. Veje and P. Dimon
Anomalous supercooled liquid structure of Ga on β-relaxation dynamics 4381
H. C. Chen and S. K. Lai
Axial segregation of granular media rotated in a drum mixer: Pattern evolution 4386
K. M. Hill, A. Caprihan, and J. Kakalios
Long-time translational self-diffusion in isotropic dispersions of colloidal rods 4394
M. P. B. van Bruggen, H. N. W. Lekkerkerker, and J. K. G. Dhont
Molecular dynamics studies of granular flow through an aperture 4404
D. Hirshfeld, Y. Radzyner, and D. C. Rapaport
Smoothed-particle method for phase separation in polymer mixtures 4416
Tohru Okuzono
Ultrathin fluid films confined to a chemically heterogeneous slit-shaped nanopore 4427
Martin Schoen and Dennis J. Diestler
Critical interface of an ionic Ising mixture 4441
Craig L. Caylor, Bruce M. Law, Piyal Senanayake, Vladimir L. Kuzmin, Vadim P. Romanov, and Simone Wiegand
Viscoelastic model of phase separation 4451
Hajime Tanaka
Entropy-driven phase separation in mixtures of small colloidal particles and semidilute polymers 4463
Richard P. Sear
Convection and size segregation in a Couette flow of granular material 4467
R. Khosropour, Jessie Zirinsky, H. K. Pak, and R. P. Behringer
Linear and nonlinear rheology of an aqueous concentrated system of cethyltrimethylammonium chloride and sodium salicylate 4474
A. Aït Ali and R. Makhloufi
Similarity law for the tilt angle of dendrites in directional solidification of non-axially-oriented crystals 4479
Silvère Akamatsu and Thomas Ihle

Biological physics

H-bond simulation in DNA using a harmonic oscillator isospectral potential 4486
E. Drigo Filho and J. R. Ruggiero
Model for a neural network structure and signal transmission 4489
C. Kotsavasiloglou, A. Kalampokis, P. Argyrakis, and S. Baloyannis
Towards a systematic classification of protein folds 4497
Per-Anker Lindgård and Henrik Bohr
Self-similarity in entanglement complexity along the backbones of compact proteins 4516
Gustavo A. Arteca
Pattern formation by electro-osmotic self-organization in flat biomembranes 4521
Marc Léonetti and E. Dubois-Violette
Exact solution of the quasispecies model in a sharply peaked fitness landscape 4526
Stefano Galluccio
Weight space structure and the storage capacity of a fully connected committee machine 4540
Yuansheng Xiong, Jong-Hoon Oh, and Chulan Kwon
Algorithmic complexity and thermodynamics of sequence-structure relationships in proteins 4545
T. Gregory Dewey
Design of force fields from data at finite temperature 4553
J. M. Deutsch and Tanya Kurosky

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 56, NUMBER 4** **OCTOBER 1997**

Transition from persistent to antipersistent correlation in biological systems 4557
Larry S. Liebovitch and Weiming Yang
Stochastic learning in a neural network with adapting synapses 4567
G. Lattanzi, G. Nardulli, G. Pasquariello, and S. Stramaglia

Plasma physics

Modulational instability of a circularly polarized wave in a magnetized electron-positron plasma with relativistic thermal energies 4574
L. Gomberoff and R. M. O. Galvão
Parametric decays of a linearly polarized electromagnetic wave in an electron-positron plasma 4581
L. Gomberoff, V. Muñoz, and R. M. O. Galvão
Propagation of an asymmetric relativistic laser pulse in plasma 4591
D. P. Garuchava, I. G. Murusidze, G. I. Suramlishvili, N. L. Tsintsadze, and D. D. Tskhakaya
Phase diagram of crystals of dusty plasma 4596
H. C. Lee, D. Y. Chen, and B. Rosenstein
Onset of diffuse reflectivity and fast electron flux inhibition in 528-nm-laser–solid interactions at ultrahigh intensity 4608
T. Feurer, W. Theobald, R. Sauerbrey, I. Uschmann, D. Altenbernd, U. Teubner, P. Gibbon, E. Förster, G. Malka, and J. L. Miquel
Onset of relativistic self-focusing in high density gas jet targets 4615
R. Fedosejevs, X. F. Wang, and G. D. Tsakiris
Compression of the multiple ion-acoustic soliton at the bottom of the space potential 4640
T. Nagasawa and Y. Nishida
Stimulated dielectric wake-field accelerator 4647
T-B. Zhang, J. L. Hirshfield, T. C. Marshall, and B. Hafizi
Wake-field generation by the ponderomotive memory effect 4656
U. Wolf and H. Schamel
Quasiclassical molecular-dynamics simulations of the electron gas: Dynamic properties 4665
J. Ortner, F. Schautz, and W. Ebeling
Triple point of Yukawa systems 4671
S. Hamaguchi, R. T. Farouki, and D. H. E. Dubin

Physics of beams

Dense electron beam radiation in a dielectric medium 4683
S. G. Oganesyan
Varying chromaticity: A damping mechanism for the transverse head-tail instability 4695
Wen-Hao Cheng, Andrew M. Sessler, and Jonathan S. Wurtele
High-efficiency E×B drifting electron laser with electrostatic wiggler 4710
Spilios Riyopoulos

Classical physics, including nonlinear media

Spatiotemporal solitons in multidimensional optical media with a quadratic nonlinearity 4725
Boris A. Malomed, P. Drummond, H. He, A. Berntson, D. Anderson, and M. Lisak
Experimental study of crease formation in an axially compressed sheet 4736
Sahraoui Chaïeb and Francisco Melo
Effects of off-diagonal nonlinearity on the time evolution of an initially localized mode 4744
Zhiwen Pan, Shijie Xiong, and Changde Gong
Influence of the fluctuations of polarization in molecular chains 4751
Elie Simo and Timoléon C. Kofané

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 56, NUMBER 4 OCTOBER 1997

Stability of bound states near the zero-dispersion wavelength in optical fibers 4757
David C. Calvo and T. R. Akylas
Clustering, grouping, self-induced switching, and controlled dynamic pattern generation in an antiphase intracavity second-harmonic-generation laser 4765
Kenju Otsuka, Yoshinori Sato, and Jyh-Long Chern
Transfer of momentum and torque from a light beam to a liquid 4773
A. Yu. Savchenko, N. V. Tabiryan, and B. Ya. Zel'dovich
Wave localization in generalized Thue-Morse superlattices with disorder 4780
Lev I. Deych, D. Zaslavsky, and A. A. Lisyansky
Stability of solitons in nonlinear fiber couplers with two orthogonal polarizations 4791
T. I. Lakoba and D. J. Kaup
Pattern formation in intracavity second-harmonic generation 4803
C. Etrich, U. Peschel, and F. Lederer
Analytic vortex solutions in an unusual Mexican-hat potential 4809
Stavros Theodorakis
Deformed Whitham equations for some near-integrable systems 4813
Alexander A. Zabolotskii
