THIRD SERIES, VOLUME 57, NUMBER 4

CONTENTS

APRIL 1998

RAPID COMMUNICATIONS

Chaos and nonlinear dynamical systems

- Nonlinear dynamics at a Hopf bifurcation with axisymmetry breaking in a jet R3695
Ionut Danaila, Jan Dušek, and Fabien Anselmet
- Effect of boundary conditions on fluctuations measures R3699
Debabrata Biswas

Classical fluids

- Extended self-similarity in kinetic surface roughening R3703
Arindam Kundagrami, Chandan Dasgupta, P. Punyindu, and S. Das Sarma
- Surface tension and dynamics of fingering patterns R3707
F. X. Magdaleno and J. Casademunt

Liquid crystals

- Critical behavior at the nematic to lamellar phase transitions: A synchrotron x-ray scattering study R3711
S. T. Shin, J. D. Brock, Mark Sutton, J. D. Litster, and Satyendra Kumar
- Critical orientational states in lyotropic liquid crystals induced by a magnetic field R3715
L. M. Vega, J. J. Bonvent, G. Barbero, and E. A. Oliveira

Complex fluids and polymers

- Reactive wetting- and dewetting-induced diffusion-limited aggregation R3719
D. W. Zheng, Weijia Wen, and K. N. Tu
- Iterative solutions of integral equations and structural stability of fluids R3723
G. Malescio, P. V. Giaquinta, and Y. Rosenfeld
- Generic density functional for electric double layers in a molecular solvent R3727
T. Biben, J. P. Hansen, and Y. Rosenfeld
- Shear flow effects on phase separation of entangled polymer blends R3731
N. Clarke and T. C. B. McLeish

Biological physics

- Frequency locking of meandering spiral waves in cardiac tissue R3735
Bradley J. Roth
- Mixed states in a neural network model R3739
Z. Tan and M. K. Ali
- Size distribution of vesicles with topological defects R3742
Georg Foltin

1063-651X(199804)57:4;1-0

(Continued)

Plasma physics

- Effects of a prepulse on γ -ray radiation produced by a femtosecond laser with only 5-mJ energy R3746
 P. Zhang, J. T. He, D. B. Chen, Z. H. Li, Y. Zhang, J. G. Bian, L. Wang, Z. L. Li, B. H. Feng,
 X. L. Zhang, D. X. Zhang, X. W. Tang, and J. Zhang

ARTICLES**General methods of statistical physics**

- Takens-Bogdanov random walks 3749
 E. R. Tracy, X. Z. Tang, and C. Kulp
- Survival probability of a mobile particle in a fluctuating field 3757
 Satya N. Majumdar and Stephen J. Cornell
- Superparamagnetic clustering of data 3767
 Shai Wiseman, Marcelo Blatt, and Eytan Domany
- Monte Carlo method to calculate the central charge and critical exponents 3784
 Paul J. M. Bastiaansen and Hubert J. F. Knops
- Coniglio-Klein mapping in the metastable region 3797
 Camillo Padoa Schioppa, Francesco Sciortino, and Piero Tartaglia
- Generalized hierarchical model of defect development and self-organized criticality 3804
 M. G. Shnirman and Y. A. Tyurina
- Stochastic model for a vortex depinning in random media 3814
 Byungnam Kahng, Kwangho Park, and Jinhee Park
- Mechanisms of synchronization and pattern formation in a lattice of pulse-coupled oscillators 3820
 Albert Díaz-Guilera, Conrad J. Pérez, and Alex Arenas
- Solving the generalized Langevin equation with the algebraically correlated noise 3829
 T. Srokowski and M. Płoszajczak
- Theory of traffic jam in a one-lane model 3839
 Hisao Hayakawa and Ken Nakanishi
- Isothermal Maxwell demon as a quantum “sewing machine” 3846
 V. Čápek
- Genetic algorithm dynamics on a rugged landscape 3853
 Stefan Bornholdt
- Interaction effects in the spectrum of the three-dimensional Ising model 3861
 P. Provero
- Absorption-desorption phase transition induced by parametric modulation 3866
 C. Van den Broeck and R. Kawai
- Confined harmonically interacting spin-polarized fermions 3871
 F. Brosens, J. T. Devreese, and L. F. Lemmens
- Dynamics of fractures in quenched disordered media 3878
 Guido Caldarelli, Raffaele Caferio, and Andrea Gabrielli
- Geometry of dynamics and phase transitions in classical lattice φ^4 theories 3886
 Lando Caiani, Lapo Casetti, Cecilia Clementi, Giulio Pettini, Marco Pettini, and Raoul Gatto
- Partial factorization of wave functions for a quantum dissipative system 3900
 C. P. Sun, Y. B. Gao, H. F. Dong, and S. R. Zhao
- Wave propagation in heterogeneous excitable media 3905
 I. Schebesch and H. Engel
- Large-system hydrodynamic limit for color conductivity in two dimensions 3911
 Wm. G. Hoover, Kevin Boercker, and Harald A. Posch

Transport of particles caused by correlation between additive and multiplicative noise	3917
J. H. Li and Z. Q. Huang	
Imitation games: Power-law sensitivity to initial conditions and nonextensivity	3923
Andrés R. R. Papa and Constantino Tsallis	
Energy transport and optical line shapes in dimers: Analytical description of the influence of colored noise	3928
Ch. Warns, I. Barvik, and P. Reineker	
Residence time distribution of a Brownian particle	3937
Alexander M. Berezhkovskii, Veaceslav Zolov, and Noam Agmon	
Functional approach for quantum systems with continuous spectrum	3948
Roberto Laura and Mario Castagnino	
Wigner-Kirkwood quantum corrections for the pair distribution function in a plasma	3962
Marie-Madeleine Gombert and Daniel Léger	
Properties of resonant activation phenomena	3990
Marián Boguñá, Josep M. Porrà, Jaume Masoliver, and Katja Lindenberg	
Long memory, fractal statistics, and Anderson localization for chemical waves and patterns with random propagation velocities	4003
Marcel Ovidiu Vlad, John Ross, and Friedemann W. Schneider	

Chaos and nonlinear dynamical systems

Collectivity embedded in complex spectra of finite interacting Fermi systems: Nuclear example	4016
S. Drożdż, S. Nishizaki, J. Speth, and M. Wójcik	
Light squeezing at the transition to quantum chaos	4023
Kirill N. Alekseev and Jan Peřina	
Bifurcations and chaos in a coupled superconducting-quantum-interference-device ring-resonator system	4035
T. D. Clark, J. F. Ralph, R. J. Prance, H. Prance, J. Diggins, and R. Whiteman	
Implications of varying communication speeds in “globally” coupled maps	4041
Sudeshna Sinha	
Stabilizing unstable orbits by slow modulation of a control parameter in a dissipative dynamic system	4046
A. N. Pisarchik, B. F. Kuntsevich, and R. Corbalán	
Nonlinear dynamics in periodic phase space	4054
A. Iomin, D. Gangardt, and S. Fishman	
Toward semiclassical theory of quantum level correlations of generic chaotic systems	4063
Daniel L. Miller	
Chaotic properties of dilute two- and three-dimensional random Lorentz gases: Equilibrium systems	4077
H. van Beijeren, Arnulf Latz, and J. R. Dorfman	
Relevance of chaos in numerical solutions of quantum billiards	4095
Baowen Li, Marko Robnik, and Bambi Hu	
Scenario for the onset of space-time chaos	4106
Gilad Goren, Jean-Pierre Eckmann, and Itamar Procaccia	
Synchronization of spatiotemporal chaos in asymmetrically coupled map lattices	4135
Yu Jiang and P. Parmananda	
Universal singularity at the closure of a gap in a random matrix theory	4140
E. Brézin and S. Hikami	

Classical fluids

Dynamical quantum chaos as fluid turbulence	4150
Tzihong Chiueh	
Cascade and dynamo action in a shell model of magnetohydrodynamic turbulence	4155
Peter Frick and Dmitriy Sokoloff	

Short-range ordering in the supercooled states of a dimer system	4165
Wen-Jong Ma and Shiow-Fon Tsay	
Sound of sonoluminescence	4170
H.-Thomas Elze, Takeshi Kodama, and Johann Rafelski	
Electrical conductivity in a dilute gas far from equilibrium	4186
V. Garzó	
Convection in a layer heated from below with a nearly insulating boundary	4198
R. M. Clever and F. H. Busse	
Neutron-diffraction study of two organic liquids conducting under a low electric field	4206
F. J. Mompeán, A. Chahid, D. Martín, and B. Ouladdiaf	
Statistical mechanics of fluids under internal constraints: Rigorous results for the one-dimensional hard rod fluid	4211
David S. Corti and Pablo G. Debenedetti	
Thermal lattice Boltzmann simulations of variable Prandtl number turbulent flows	4227
Min Soe, George Vahala, Pavol Pavlo, Linda Vahala, and Hudong Chen	
Influence of the Soret effect on convection of binary fluids	4238
St. Hollinger and M. Lücke	
Model for convection in binary liquids	4250
St. Hollinger, M. Lücke, and H. W. Müller	
Physical parameters affecting sonoluminescence: A self-consistent hydrodynamic study	4265
L. Yuan, H. Y. Cheng, M.-C. Chu, and P. T. Leung	
Crossover behavior in turbulent velocity fluctuations	4281
Jens Eggers and Z. Jane Wang	

Liquid crystals

Spatial correlation effects of molecules on the helical structure of cholesteric liquid crystals	4289
Liangbin Hu, Yonggang Jiang, and Ruibao Tao	
Nonequilibrium structures in the thin layers of ferronematics	4296
Andrej Yu. Zubarev and Larisa Yu. Iskakova	
Critical behavior of a smectic-A to nematic phase transition imbedded in a random network of voids	4305
Sihai Qian, Germano S. Iannacchione, and Daniele Finotello	
Deuteron spin-spin relaxation study of second-order director fluctuations in the nematogen 5CB	4316
Ronald Y. Dong	

Complex fluids and polymers

Quantitative phase-field modeling of dendritic growth in two and three dimensions	4323
Alain Karma and Wouter-Jan Rappel	
Primary instabilities in Faraday waves under an arbitrarily periodic excitation	4350
Chen Weizhong and Wei Rongjue	
Hierarchical model of slow constrained dynamics	4354
M. A. Muñoz, A. Gabrielli, H. Inaoka, and L. Pietronero	
Thermodynamic stability of periodic and quasiperiodic crystals within a van der Waals approximation	4361
R. Achrayah and M. Baus	
Tethered networks in two dimensions: A low-temperature view	4368
Paul E. Lammert and Dennis E. Discher	
Temporally disordered granular flow: A model of landslides	4375
Bosiljka Tadić	
Calculating exact propagators in single-file systems via the reflection principle	4382
Christian Rödenbeck, Jörg Kärger, and Karsten Hahn	

Rotational correlation functions and apparently enhanced translational diffusion in a free-energy landscape model for the α relaxation in glass-forming liquids	4398
Gregor Diezemann, Hans Sillescu, Gerald Hinze, and Roland Böhmer	
Brownian motion and polymer statistics on certain curved manifolds	4411
Radu P. Mondescu and M. Muthukumar	
Influence of the softness of the repulsive core interaction on cluster melting	4420
C. Rey, J. García-Rodeja, L. J. Gallego, and M. J. Grimson	
Vibrational dynamics of cluster-cluster aggregations	4426
Takamichi Terao, Arifumi Yamaya, and Tsuneyoshi Nakayama	
Soret feedback in thermal diffusion of suspensions	4431
Nelson V. Tabiryan and Weili Luo	
Models of stress fluctuations in granular media	4441
P. Claudin, J.-P. Bouchaud, M. E. Cates, and J. P. Wittmer	
“Partial pressures” supported by granulometric classes in polydisperse granular media	4458
Olivier Tsoungui, Denis Vallet, Jean-Claude Charmet, and Stéphane Roux	
Permeability of three-dimensional fracture networks	4466
N. Koudina, R. Gonzalez Garcia, J.-F. Thovert, and P. M. Adler	
Stochastic equation for conserved growth in a restricted solid-on-solid model	4480
Zhi-Feng Huang and Bing-Lin Gu	
Virial coefficients of hard-sphere mixtures	4486
E. Enciso, N. G. Almarza, M. A. González, and F. J. Bermejo	
Boundary effects on the angle of repose in rotating cylinders	4491
Christian M. Dury, Gerald H. Ristow, Jamie L. Moss, and Masami Nakagawa	
Diffusing-light spectroscopies beyond the diffusion limit: The role of ballistic transport and anisotropic scattering	4498
P.-A. Lemieux, M. U. Vera, and D. J. Durian	
<i>In situ</i> time response measurement of the microspheres dispersed in electrorheological fluids	4516
Weijia Wen, D. W. Zheng, and K. N. Tu	
Structure function and fractal dimension of diffusion-limited colloidal aggregates	4520
Mohammed Lach-hab, Agustín E. González, and Estela Blaisten-Barojas	
Metastability of a granular surface in a spinning bucket	4528
Chuck Yeung	
Inhomogeneous magnetization in dipolar ferromagnetic liquids	4535
B. Groh and S. Dietrich	
Mesomorphic polymorphism of binary mixtures of water and surfactants	4547
A. Linhananta and D. E. Sullivan	

Biological physics

Fractional Brownian motion as a nonstationary process: An alternative paradigm for DNA sequences	4558
Paolo Allegrini, Marco Buiatti, Paolo Grigolini, and Bruce J. West	
Phase-ordering kinetics of cemetery organization in ants	4568
Eric Bonabeau, Guy Theraulaz, Vincent Fourcassie, and Jean-Louis Deneubourg	
Statistics of extinction and survival in Lotka-Volterra systems	4572
Guillermo Abramson and Damián H. Zanette	
Synchronous oscillations in the cerebral cortex	4578
P. A. Robinson, J. J. Wright, and C. J. Rennie	
Phyllotaxis: Its geometry and dynamics	4589
Sy-Sang Liaw	
Unstable periodic orbits in human cardiac rhythms	4594
K. Narayanan, R. B. Govindan, and M. S. Gopinathan	

Adaptation and optimal chemotactic strategy for <i>E. coli</i>	4604
S. P. Strong, B. Freedman, William Bialek, and R. Koberle	
First principles calculation of the activity of cytochrome P450	4618
M. D. Segall, M. C. Payne, S. W. Ellis, G. T. Tucker, and R. N. Boyes	
Eccentric motions of spiral cores in aggregates of <i>Dictyostelium</i> cells	4622
Nobuaki Nishiyama	
Plasma physics	
Screening potential in lattices and high-density plasmas	4627
X. H. Do, M. Amari, J. Butaux, and H. Nguyen	
Nonlinear ionization waves	4633
Tzihong Chiueh and David M. T. Kuo	
Amplitude collapse of nonlinear double-layer oscillations	4638
M. Wendt, I. Axnäs, and S. Torvén	
Propagation of an ultrashort, intense laser pulse in a relativistic plasma	4645
Burke Ritchie and Christopher D. Decker	
Competing effects of collisional ionization and radiative cooling in inertially confined plasmas	4650
N. C. Woolsey, B. A. Hammel, C. J. Keane, C. A. Back, J. C. Moreno, J. K. Nash, A. Calisti, C. Mossé, R. Stamm, B. Talin, A. Asfaw, L. S. Klein, and R. W. Lee	
Measurements of early time radiation asymmetry in vacuum and methane-filled <i>Hohlraums</i> with the reemission ball technique	4663
G. R. Magelssen, N. D. Delamater, E. L. Lindman, and A. A. Hauer	
Dielectric function and electrical dc conductivity of nonideal plasmas	4673
G. Röpke	
Ionization and recombination rates of atomic oxygen in high-temperature air plasma flows	4684
A. Bourdon, Y. Térésia, and P. Vervisch	
X-ray scattering as a dense plasma diagnostic	4693
Eran Nardi, Zeev Zinamon, David Riley, and Nigel C. Woolsey	
Direct calculation of inverse-bremsstrahlung absorption in strongly coupled, nonlinearly driven laser plasmas	4698
Susanne Pfalzner and Paul Gibbon	
Physics of beams	
Nonlinear effects of phase modulation in an electron storage ring	4706
J. M. Byrd, W.-H. Cheng, and F. Zimmermann	
Stability of anisotropic beams with space charge	4713
I. Hofmann	
Self-consistent beam distributions with space charge and dispersion in a circular ring lattice	4725
Marco Venturini and Martin Reiser	
Classical physics, including nonlinear media	
Compacton solutions for a class of two parameter generalized odd-order Korteweg–de Vries equations	4733
Bishwajyoti Dey	
Switching between bistable states in a discrete nonlinear model with long-range dispersion	4739
Magnus Johansson, Yuri B. Gaididei, Peter L. Christiansen, and K. Ø. Rasmussen	
Energy dissipation and trapping of particles moving on a rough surface	4743
C. Henrique, M. A. Aguirre, A. Calvo, I. Ippolito, S. Dippel, G. G. Batrouni, and D. Bideau	
Analytical solution for the modified nonlinear Schrödinger equation describing optical shock formation	4751
Jairo R. de Oliveira and Marco A. de Moura	

Dynamical evolution of multiple four-wave-mixing processes in an optical fiber	4757
D. L. Hart, Arthur F. Judy, Rajarshi Roy, and James W. Beletic	
First-order perturbed Korteweg-de Vries solitons	4775
R. A. Kraenkel	
Dielectric and optical properties of pure liquids by means of <i>ab initio</i> reaction field theory	4778
Yi Luo, Patrick Norman, Hans Ågren, Kristian O. Sylvester-Hvid, and Kurt V. Mikkelsen	
Kink solitons of the double-quadratic model in the presence of an external spatially inhomogeneous force	4786
J. A. Hołyst	

Computational physics

Numerical technique for studying stochastic resonance	4789
M. V. Tretyakov	
Physics-motivated numerical solvers for partial differential equations	4795
L. San Martín and Y. Oono	

BRIEF REPORTS**General methods of statistical physics**

Multiplicative processes and power laws	4811
Didier Sornette	
Overhangs in interface growth and ground-state paths	4814
Matteo Marsili and Yi-Cheng Zhang	
Dynamical reduction of discrete systems based on the renormalization-group method	4817
T. Kunihiro and J. Matsukidaira	

Classical fluids

Liquid polymorphism of simple fluids within a van der Waals theory	4821
Carlos F. Tejero and Marc Baus	

Liquid crystals

Infinitely thin disks exhibit a first order nematic-columnar phase transition	4824
Martin A. Bates and Daan Frenkel	

Complex fluids and polymers

Static and dynamic epidemics on chains and trees with two- and three-dimensional loops	4827
Kristinka Ivanova	
Absence of inelastic collapse in a realistic three ball model	4831
D. Goldman, M. D. Shattuck, C. Bizon, W. D. McCormick, J. B. Swift, and Harry L. Swinney	
Lattice Boltzmann scheme with real numbered solid density for the simulation of flow in porous media	4834
Orla Dardis and John McCloskey	

Biological physics

Translational diffusion in phospholipid bilayer membranes	4838
A. Haibel, G. Nimtz, R. Pelster, and R. Jaggi	
Genetic polymorphism in an evolving population	4842
H. Y. Lee, D. Kim, and M. Y. Choi
