Guidelines for Estimating Length	xii

RAPID COMMUNICATIONS

General methods of statistical physics

Corner wetting transition in the two-dimensional Ising model	R1
Adam Lipowski	

Chaos and nonlinear dynamical systems

Reconstruction of dynamical and geometrical properties of chaotic attractors from threshold-crossing interspike intervals	R4
Natalia B. Janson, Alexey N. Pavlov, Alexander B. Neiman, and Vadim S. Anishchenko	
Synchronization of stochastically coupled cellular automata	R8
Luis G. Morelli and Damián H. Zanette	

Classical fluids

Phase behavior of associating liquid mixtures	R12
Michael Kotelyanskii, Boris Veytsman, and Sanat K. Kumar	

Liquid crystals

K_{13} term and effective boundary condition for the nematic director	R16
V. M. Pergamenschchik	

Complex fluids, polymers, and granular materials

Dewetting, partial wetting, and spreading of a two-dimensional monolayer on solid surface	R20
G. Oshanin, J. De Coninck, A. M. Cazabat, and M. Moreau	
Elasticity near the vulcanization transition	R24
Horacio E. Castillo and Paul M. Goldbart	

Plasma physics

Experimental study of the electron collision effects on the resonance cone phenomenon	R28
E. Bésuelle, G. Matthieussent, P. Thévenet, and J. Godiot	

$K\beta$ line emission in fusion plasmas	R32
F. B. Rosmej	
Experimental observation of correlated magnetic reconnection and Alfvénic ion jets	R36
T. W. Kornack, P. K. Sollins, and M. R. Brown	
Classical physics, including nonlinear media	
Creation and annihilation of intrinsic localized excitations	R40
K. Ø. Rasmussen, A. R. Bishop, and Niels Grønbech-Jensen	
Solitary waves in nonlinear dispersive systems with zero average dispersion	R44
S. K. Turitsyn, N. F. Smyth, and E. G. Turitsyna	
Average dynamics of the optical soliton in communication lines with dispersion management: Analytical results	R48
Sergei K. Turitsyn, Alejandro B. Aceves, Christopher K. R. T. Jones, and Vadim Zharnitsky	
π kinks in strongly ac driven sine-Gordon systems	R52
Vadim Zharnitsky, Igor Mitkov, and Niels Grønbech-Jensen	

ARTICLES

General methods of statistical physics

Invariant correlational entropy and complexity of quantum states	56
Valentin V. Sokolov, B. Alex Brown, and Vladimir Zelevinsky	
Evolutionary prisoner's dilemma game on a square lattice	69
György Szabó and Csaba Tóke	
Fluctuations and correlations in the polarization patterns of a Kerr medium	74
Miguel Hoyuelos, Pere Colet, and Maxi San Miguel	
Exact solution of the Ising model on checkerboard fractals in an external magnetic field	80
Tatijana Stošić, Borko D. Stošić, and F. G. Brady Moreira	
Collective surface diffusion: n -fold way kinetic Monte Carlo simulation	86
F. M. Bulnes, V. D. Pereyra, and J. L. Riccardo	
Exact nonequilibrium potential for the FitzHugh-Nagumo model in the excitable and bistable regimes	93
G. G. Izús, R. R. Deza, and H. S. Wio	
Nonlinear field dependence of the mobility of a charge subjected to a superposition of dichotomous stochastic potentials	99
V. M. Kenkre, M. Kuś, D. H. Dunlap, and P. E. Parris	
Front propagation: Precursors, cutoffs, and structural stability	107
David A. Kessler, Zvi Ner, and Leonard M. Sander	
dc signal detection via dynamical asymmetry in a nonlinear device	115
M. E. Inchiosa and A. R. Bulsara	
Field theoretic approach to the counting problem of Hamiltonian cycles of graphs	128
Saburo Higuchi	
Generalized force model of traffic dynamics	133
Dirk Helbing and Benno Tilch	
Net voltage caused by correlated symmetric noises	139
Jing-hui Li and Zu-qia Huang	
Critical behavior of a one-dimensional monomer-dimer reaction model with lateral interactions	144
Roberto A. Monetti	
Networking process and fractal dimensionality in percolation	154
Makoto S. Watanabe	

Diffusion reordering kinetics in lattice-gas systems: Time evolution of configurational entropy and internal energy	159
Siegward Weinketz	
Disorder-induced critical behavior in driven diffusive systems	168
Bosiljka Tadić	
Nonequilibrium phase transition in the kinetic Ising model: Dynamical symmetry breaking by randomly varying magnetic field	174
Muktish Acharyya	
Nonequilibrium phase transition in the kinetic Ising model: Is the transition point the maximum lossy point?	179
Muktish Acharyya	
Drift instabilities in the pulses from cw mode-locked lasers	187
U. Morgner and F. Mitschke	
Phase transition in a computer network traffic model	193
Toru Ohira and Ryusuke Sawatari	
Dynamics of a simple quantum system in a complex environment	196
Aurel Bulgac, Giu Do Dang, and Dimitri Kusnezov	
Finite-time thermodynamics: Conditions of minimal dissipation for thermodynamic process with given rate	215
Anatoly M. Tsirlin, Valentina A. Mironova, Sergei A. Amelkin, and Vladimir Kazakov	
Reconstructing random media. II. Three-dimensional media from two-dimensional cuts	224
C. L. Y. Yeong and S. Torquato	
Kinetic phase transition of the dimer-dimer surface reaction model	234
Hou Zhonghuai, Yang Lingfa, and Xin Houwen	
Level statistics of multispin-coupling models with first- and second-order phase transitions	241
Jean Christian Anglès d'Auriac and Ferenc Iglói	
Dynamical properties of the Zhang model of self-organized criticality	247
Achille Giacometti and Albert Díaz-Guilera	
Semi-infinite anisotropic spherical model: Correlations at $T \geq T_c$	254
D. A. Garanin	
Kink dynamics in a one-dimensional growing surface	281
Paolo Politi	
Intermittency model for urban development	295
Susanna C. Manrubia and Damián H. Zanette	
Universality classes in isotropic, Abelian, and non-Abelian sandpile models	303
Erel Milshtein, Ofer Biham, and Sorin Solomon	
Correlated initial conditions in directed percolation	311
Haye Hinrichsen and Géza Ódor	
Scaling and nonlinear field studies of the jellium model for Wigner electron systems in d dimensions	318
J. A. Tuszyński, J. M. Dixon, and N. H. March	
Effects of noise on the phase dynamics of nonlinear oscillators	327
A. Daffertshofer	
Tunneling of a quantum breather in a one-dimensional chain	339
V. Fleurov, R. Schilling, and S. Flach	
Chaos and nonlinear dynamical systems	
Synchronization conditions and desynchronizing patterns in coupled limit-cycle and chaotic systems	347
Louis M. Pecora	
Low-dimensional approximation and control of periodic solutions in spatially extended systems	361
S. Y. Shvartsman and I. G. Kevrekidis	
Analytical solutions to one-dimensional dissipative and discrete chaotic dynamics	369
D. Pingel, P. Schmelcher, and F. K. Diakonov	

Selective quasienergies from short time cross-correlation probability amplitudes by the filter-diagonalization method	376
Markus Glück, H. Jürgen Korsch, and Nimrod Moiseyev	
Antiphase synchronism in chaotic systems	382
Ling-Yuan Cao and Ying-Cheng Lai	
Wave-function entropy and dynamical symmetry breaking in the interacting boson model	387
Pavel Cejnar and Jan Jolie	
Transition from Poisson to Gaussian unitary statistics: The two-point correlation function	400
Hervé Kunz and Boris Shapiro	
Dynamical temperatures of quartic and Henon-Heiles oscillators	407
Vishnu M. Bannur	
Chaos control in multistable delay-differential equations and their singular limit maps	410
Boualem Mensour and André Longtin	
Resonant control of the Rössler system	423
Valery Tereshko and Elena Shchekinova	
Model-independent nonlinear control algorithm with application to a liquid bridge experiment	427
Valery Petrov, Anders Haaning, Kurt A. Muehlner, Stephen J. Van Hook, and Harry L. Swinney	
Classical fluids	
Viscoelastic effects from the Enskog equation for uniform shear flow	434
James F. Lutsko	
Analytic expression for the short-time rate of growth of the intermaterial contact perimeter in two-dimensional chaotic flows and Hamiltonian systems	447
Alessandra Adrover, Massimiliano Giona, Fernando J. Muzzio, Stefano Cerbelli, and Mario M. Alvarez	
Difference-quotient turbulence model: The axisymmetric isothermal jet	459
Peter W. Egolf and Daniel A. Weiss	
Single-bubble dynamics in liquid nitrogen	471
Kyuichi Yasui	
Lattice Boltzmann simulations of lamellar and droplet phases	480
G. Gonnella, E. Orlandini, and J. M. Yeomans	
Viscous boundary layers at the sidewall of a convection cell	486
Xin-Liang Qiu and Ke-Qing Xia	
Measurements of the reduced force coefficients for H ₂ , N ₂ , CO, and CO ₂ incident upon a solar panel array material, SiO ₂ -coated Kapton, Kapton, and Z-93-coated Al	492
Steven R. Cook, Mark A. Hoffbauer, David D. Clark, and Jon B. Cross	
Analyzing gas-surface interactions using the reduced force coefficients	504
Steven R. Cook and Mark A. Hoffbauer	
Coupling of rotating water jets by surface waves	512
F. Giorgiutti, L. Laurent, and F. Daviaud	
Turbulent transport of a tracer: An electromagnetic formulation	522
S. Sridhar	
Resolving the space-time structure of sonoluminescence by intensity interferometry	526
Claus Slotta and Ulrich Heinz	
Hard-sphere statistics along the metastable amorphous branch	532
M. D. Rintoul and S. Torquato	
Liquid dynamics theory of the velocity autocorrelation function and self-diffusion	538
Duane C. Wallace	
Generalized hydrodynamics for a Poiseuille flow: Theory and simulations	546
Dino Risso and Patricio Cordero	

Spatial correlations of singularity strengths in multifractal branching processes	554
Martin Greiner, Jürgen Schmieg, Felix Eickemeyer, Peter Lipa, and Hans C. Eggers	
Wave-number selection and parity-breaking bifurcation in directional viscous fingering	565
Ludovic Bellon, Laurent Fournelle, Vahé Ter Minassian, and Marc Rabaud	
Liquid crystals	
Birefringence and tilt angle in the antiferroelectric, ferroelectric, and intermediate phases of chiral smectic liquid crystals	575
M. Škarabot, Mojca Čepič, B. Žekš, R. Blinc, G. Heppke, A. V. Kityk, and I. Mušević	
Weakly nematic–highly nematic phase transitions in main-chain liquid-crystalline polymers	585
Akihiko Matsuyama and Tadayo Kato	
Phase behavior in the reentrant-nematic region of chiral frustrated smectic liquid crystals	595
G. S. Iannacchione, C. W. Garland, J. Mieczkowski, and E. Gorecka	
Collective fluctuations and wetting in nematic liquid crystals	602
P. Ziherl, A. Sarlah, and S. Žumer	
Can one hear structures of smectic films?	610
I. Kraus, Ch. Bahr, I. V. Chikina, and P. Pieranski	
Change of the nature of the multicritical point in magnetically induced splay-twist Fréedericksz transitions	626
J. P. Casquilho, L. N. Gonçalves, and J. L. Figueirinhas	
Sound propagation and damping in the vicinity of the smectic- <i>A</i> –hexatic- <i>B</i> phase transition of 4-propionyl-4'- <i>n</i> -heptanoyloxyazobenzene	630
D. Collin, V. Reys, J. L. Gallani, L. G. Benguigui, G. Poeti, and P. Martinoty	
Annihilation of a wedge disclination pair in a hybrid aligned nematic cell	643
Kiyoshi Minoura, Yasuyuki Kimura, Kohzo Ito, Reinosuke Hayakawa, and Toshiaki Miura	
Electroconvection in freely suspended smectic- <i>C</i> and smectic- <i>C</i> * films	650
C. Langer and R. Stannarius	
Complex fluids, polymers, and granular materials	
Formation of two-dimensional colloidal voids, soap froths, and clusters	660
Jaime Ruiz-García, Rogelio Gámez-Corrales, and Boris I. Ivlev	
Layer-by-layer growth in noise-reduced growth models	664
L. Brendel, H. Kallabis, and D. E. Wolf	
Lattice model for the calculation of the angle of repose from microscopic grain properties	672
J. J. Alonso, J.-P. Hovi, and H. J. Herrmann	
Concentration profiles of colloidal mixtures in a cylindrical pore	681
M. Chávez-Páez, E. Urrutia-Bañuelos, and M. Medina-Noyola	
Defects in wetting fronts: Experimental and theoretical results	689
O. Zik, T. Kustanovich, E. Moses, and Z. Olami	
From ballistic deposition to the Kardar-Parisi-Zhang equation through a limiting procedure	700
Takashi Nagatani	
Fragmentation of fluids by molecular dynamics	704
S. Toxvaerd	
Viscoelastic behavior of aqueous solutions of a polyoxyethylene-nonionic-amphiphile surfactant	713
G. D'Arrigo and G. Briganti	
Coil-globule transition of a semiflexible polymer driven by the addition of spherical particles	724
Richard P. Sear	
Anomalous diffusion in gelatin-surfactant solutions and gels	729
Saroj Maity and H. B. Bohidar	
Rheological constitutive equation for a model of soft glassy materials	738
Peter Sollich	

Growth of disorder about point defects in a two-dimensional foam	760
A. Abd el Kader and J. C. Earnshaw	
Scaling of heterogeneous distributions of conductances: Renormalization versus exact results	771
Ricardo Paredes V. and Vladimir Alvarado	
Dynamic heterogeneity, spatially distributed stretched-exponential patterns, and transient dispersions in solvation dynamics	779
Ranko Richert and Manfred Richert	
Effect of geometry and anisotropy of a Hele-Shaw cell on viscous fingering of polymer solutions	785
Masami Kawaguchi, Atushi Shibata, Koukichi Shimomoto, and Tadayo Kato	
Domain-spatial correlation functions and scaling relations of nucleation and growth in polymer films	789
Tao Huang, Tomohiro Tsuji, M. R. Kamal, and A. D. Rey	
Static and dynamic light scattering of a critical polydisperse polymer solution	793
Rio Kita, Kenji Kubota, and Toshiaki Dobashi	
Entropic origin of the growth of relaxation times in simple glassy liquids	801
Chandan Dasgupta and Oriol T. Valls	
Static friction and arch formation in granular materials	805
J. Duran, E. Kolb, and L. Vanel	
Energy flows in vibrated granular media	813
Sean McNamara and Stefan Luding	
Numerical evidence of stationary and breathing concentration patterns in the Oregonator with equal diffusivities	823
Jack D. Dockery and Richard J. Field	

Biological physics

Statistical mechanics approach to early stopping and weight decay	833
Siegfried Bös	
Glassylike low-frequency dynamics of globular proteins	845
P. Etchegoin	
Generalization ability of a perceptron with nonmonotonic transfer function	849
Jun-ichi Inoue, Hidetoshi Nishimori, and Yoshiyuki Kabashima	
Statistical correlation of nucleotides in a DNA sequence	861
Liaofu Luo, Weijiang Lee, Lijun Jia, Fengmin Ji, and Lu Tsai	
Mutual synchronization in ensembles of globally coupled neural networks	872
D. H. Zanette and A. S. Mikhailov	
Stochastic resonance in neural systems: Effect of temporal correlation in the spike trains	876
G. Mato	
Simulations of a single membrane between two walls using a Monte Carlo method	881
Nikolai Gouliaev and John F. Nagle	
Self-assembled DNA-cationic-lipid complexes: Two-dimensional smectic ordering, correlations, and interactions	889
T. Salditt, I. Koltover, J. O. Rädler, and C. R. Safinya	
Phase models with explicit time delays	905
Eugene M. Izhikevich	
Principal torsion angles of collective motions in biomolecules: A study of a single base opening in DNA duplexes	909
Y. Z. Chen, V. Mohan, and R. H. Griffey	
Noisy Lévy walk analog of two-dimensional DNA walks for chromosomes of <i>S. cerevisiae</i>	914
Guillermo Abramson, Pablo A. Alemany, and Hilda A. Cerdeira	

Non-Markovian character of ionic current fluctuations in membrane channels	919
A. Fuliński, Z. Grzywna, I. Mellor, Z. Siwy, and P. N. R. Usherwood	
Plasma physics	
Self-generated magnetic field and Faraday rotation in a laser-produced plasma	925
Manoranjan Khan, C. Das, B. Chakraborty, T. Desai, H. C. Pant, M. K. Srivastava, and S. V. Lawande	
Magnetic islands in a magnetized plasma with electron flow	931
J. Vranješ	
Parametrization of nonlinear and chaotic oscillations in driven beam-plasma diodes	936
Min Sup Hur, Hae June Lee, and Jae Koo Lee	
Modeling the radiative properties of dense plasmas	942
P. Gauthier, S. J. Rose, P. Sauvan, P. Angelo, E. Leboucher-Dalimier, A. Calisti, and B. Talin	
Tokamak: A Hamiltonian twist map for magnetic field lines in a toroidal geometry	951
R. Balescu, M. Vlad, and F. Spineanu	
Nonlocal electron kinetics in a weakly ionized plasma	965
E. Furkal, A. Smolyakov, and A. Hirose	
Swarm approximation for weakly ionized plasmas	976
A. Rokhlenko	
Physics of beams	
Microwave instability as a coherent light source	984
Jiunn-Ming Wang	
Quantumlike corrections and semiclassical description of charged-particle beam transport	992
R. Fedeles and V. I. Man'ko	
Double resonance in cyclotron resonance masers	1002
G. S. Nusinovich and J. Zhao	
Inhomogeneous broadening effects in a multiharmonic wiggler based optical klystron	1011
Michael G. Kong	
Spin depolarization due to beam-beam collisions	1019
Yuri K. Batygin and Takeshi Katayama	
Classical physics, including nonlinear media	
Scattering of the ϕ^4 kink with an interface	1033
P. Wofo	
TE-polarized waves guided by a lossless nonlinear three-layer structure	1040
H. W. Schürmann, V. S. Serov, and Yu. V. Shestopalov	
WKB solution of the wave equation for a plane angular sector	1051
Ahmad T. Abawi and Roger F. Dashen	
Direct approach to the study of soliton perturbations of the nonlinear Schrödinger equation and the sine-Gordon equation	1064
Jiaren Yan, Yi Tang, Guanghui Zhou, and Zhenhua Chen	
Theoretical study of solitonlike propagation of picosecond light pulses interacting with Wannier excitons	1074
I. Talanina, D. Burak, R. Binder, H. Giessen, and N. Peyghambarian	
Near-field optical contrasts in the Fresnel evanescent wave	1081
Christian Girard, Alain Dereux, and Jean-Claude Weeber	
Ultrashort pulsed Gaussian light beams	1086
Miguel A. Porras	
Transverse localization of directed waves in random media	1094
Gregory Samelsohn and Reuven Mazar	

Normal-mode decomposition for the optical response of cylinder clusters	1101
A. J. Reuben and G. B. Smith	
Phase plane Stäckel potential dynamics of the Manakov system	1112
C. Polymilis, K. Hizanidis, and D. J. Frantzeskakis	

Computational physics

Kinetic roughening in fiber deposition	1125
J. Vinnurva, M. Alava, T. Ala-Nissila, and J. Krug	
Computer simulation of the morphological characteristics of thermally sprayed coatings	1132
A. T. Bernardes, F. G. S. Araújo, and J. R. T. Branco	

BRIEF REPORTS**General methods of statistical physics**

Large fluctuation of thermodynamic quantities in a coupled Bernoulli map lattice	1137
Hidetsugu Sakaguchi	
Feynman path-integral for the damped Caldirola-Kanai action	1141
Luiz C. L. Botelho and Edson P. da Silva	
Hybridized discrete model for the anisotropic Kardar-Parisi-Zhang equation	1144
Hyun-Joo Kim, In-mook Kim, and Jin Min Kim	
Strengthened Lindblad inequality: Applications in nonequilibrium thermodynamics and quantum information theory	1148
A. E. Allahverdyan and D. B. Saakian	
Branched Eden clusters in the dynamic epidemic model	1152
N. Vandewalle, M. Ausloos, and R. Cloots	
Test for nonlinear dynamical behavior in symbol sequences	1155
Henning Voss and Jürgen Kurths	

Chaos and nonlinear dynamical systems

Unmasking a hyperchaotic communication scheme	1159
Kevin M. Short and Andrew T. Parker	

Plasma physics

Relativistic space-charge-limited bipolar flow	1163
C. Litwin and R. Rosner	
Neutron production by 200 mJ ultrashort laser pulses	1165
G. Pretzler, A. Saemann, A. Pukhov, D. Rudolph, T. Schätz, U. Schramm, P. Thirolf, D. Habs, K. Eidmann, G. D. Tsakiris, J. Meyer-ter-Vehn, and K. J. Witte	

Computational physics

Algorithm for numerical integration of the rigid-body equations of motion	1169
Igor P. Omelyan	

ERRATA

Erratum: Micellar-shape anisometry near isotropic-liquid-crystal phase transitions [Phys. Rev. E 47 , 2551 (1993)]	1173
R. Itri and L. Q. Amaral
