CONTENTS - *Continued*

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 58, NUMBER 2** **AUGUST 1998**

Generic emergence of power law distributions and Lévy-Stable intermittent fluctuations in discrete logistic systems 1352
Ofer Biham, Ofer Malcai, Moshe Levy, and Sorin Solomon
Self-similar exponential approximants 1359
V. I. Yukalov and S. Gluzman
Non-Hermitian localization and population biology 1383
David R. Nelson and Nadav M. Shnerb
Jamming transition in a homogeneous one-dimensional system: The bus route model 1404
O. J. O'Loan, M. R. Evans, and M. E. Cates
Dynamics of a nonlinear oscillator which is coupled to various model heat baths 1419
Donald P. Visco Jr. and Surajit Sen
Two-lane traffic rules for cellular automata: A systematic approach 1425
Kai Nagel, Dietrich E. Wolf, Peter Wagner, and Patrice Simon
Evidence for self-organized criticality in the Bean critical state in superconductors 1438
C. M. Aegerter
Generalized entropy-based criterion for consistent testing 1442
Constantino Tsallis
Surface critical behavior of driven diffusive systems with open boundaries 1446
K. Oerding and H. K. Janssen
Exact three-dimensional Casimir force amplitude, C function, and Binder's cumulant ratio: Spherical model results 1455
Daniel M. Danchev
Amplitude equations for extended discrete systems: A study of an antiferromagnetic spin chain 1463
B. Rumpf and H. Sauermann
Phase behavior of a system of particles with core collapse 1478
E. A. Jagla
Ionic reactions in two dimensions with disorder 1487
Jeong-Man Park and Michael W. Deem
Gutenberg-Richter and characteristic earthquake behavior in simple mean-field models of heterogeneous faults 1494
Karin Dahmen, Deniz Ertaş, and Yehuda Ben-Zion
Properties of the two-dimensional random-bond $\pm J$ Ising spin glass 1502
J. A. Blackman, J. R. Gonçalves, and J. Poulter
Defect relaxation and coarsening exponents 1508
A. J. Bray
Dynamics of driven interfaces near isotropic percolation transition 1514
M.-P. Kuittu, M. Haataja, N. Provatas, and T. Ala-Nissila
Universal finite-size scaling functions for percolation on three-dimensional lattices 1521
Chai-Yu Lin and Chin-Kun Hu
Probabilistic approach to time-dependent load-transfer models of fracture 1528
J. B. Gómez, Y. Moreno, and A. F. Pacheco
Diffusion controlled initial recombination 1533
T. Christen and M. Büttiker
Perturbation expansion in phase-ordering kinetics: I. Scalar order parameter 1543
Gene F. Mazenko
Dynamic ductile to brittle transition in a one-dimensional model of viscoplasticity 1568
Alexander E. Lobkovsky and J. S. Langer
From individual to collective pinning: Effect of long-range elastic interactions 1577
Anne Tanguy, Matthieu Gounelle, and Stéphane Roux
Asymptotic power law of moments in a random multiplicative process with weak additive noise 1591
Hiroya Nakao

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 58, NUMBER 2** **AUGUST 1998**

Driven Frenkel-Kontorova model. I. Uniform sliding states and dynamical domains of different particle densities 1601
Torsten Strunz and Franz-Josef Elmer
Driven Frenkel-Kontorova model. II. Chaotic sliding and nonequilibrium melting and freezing 1612
Torsten Strunz and Franz-Josef Elmer
Anomalous transport in external fields: Continuous time random walks and fractional diffusion equations extended 1621
Ralf Metzler, Joseph Klafter, and Igor M. Sokolov
Correlations in a confined gas of harmonically interacting spin-polarized fermions 1634
F. Brosens, J. T. Devreese, and L. F. Lemmens
Exact correlation functions of Bethe lattice spin models in external magnetic fields 1644
Chin-Kun Hu and N. Sh. Izmailian

Chaos and nonlinear dynamical systems

Interaction between Hopf and static instabilities in a pattern-forming optical system 1654
Yu. A. Logvin and T. Ackemann
Synchronization of the mean velocity of a particle in stochastic ratchets with a running wave 1662
D. E. Postnov, A. P. Nikitin, and V. S. Anishchenko
Driven maps and the emergence of ordered collective behavior in globally coupled maps 1665
A. Parravano and M. G. Cosenza
Entropy balance in the presence of drift and diffusion currents: An elementary chaotic map approach 1672
Jürgen Vollmer, Tamás Tél, and Wolfgang Breymann
Experimental control of a chaotic point process using interspike intervals 1685
G. Martin Hall, Sonya Bahar, and Daniel J. Gauthier
Lévy flights in quenched random force fields 1690
Hans C. Fogedby
High harmonic generation in systems with bounded chaos 1713
W. Chism, T. Timberlake, and L. E. Reichl
Dynamics of coding in communicating with chaos 1724
Erik Bollt and Ying-Cheng Lai
Mode fluctuation distribution for spectra of superconducting microwave billiards 1737
H. Alt, A. Bäcker, C. Dembowski, H.-D. Gräf, R. Hofferbert, H. Rehfeld, and A. Richter
Squeezed state dynamics of kicked quantum systems 1743
Bambi Hu, Baowen Li, Jie Liu, and Ji-Lin Zhou
Half-period delayed feedback control for dynamical systems with symmetries 1757
Hiroyuki Nakajima and Yoshisuke Ueda
Pattern interaction and spiral waves in a two-layer system of excitable units 1764
V. I. Nekorkin, V. B. Kazantsev, M. G.Velarde, and L. O. Chua
Chaos in trapped particle orbits 1774
R. B. White
Free particle chaotic scattering off two oscillating disks 1780
A. Antillón, Jorge V. José, and T. H. Seligman
Dynamics of nonlinear oscillators with random interactions 1789
J. C. Stiller and G. Radons
Testing stationarity in time series 1800
A. Witt, J. Kurths, and A. Pikovsky

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 58, NUMBER 2** **AUGUST 1998**

Classical fluids

Improved shell model of turbulence 1811
Victor S. L'vov, Evgenii Podivilov, Anna Pomyalov, Itamar Procaccia, and Damien Vandembroucq
Renormalization group, operator product expansion, and anomalous scaling in a model of advected passive scalar 1823
Loran Ts. Adzhemyan, Nikolaj V. Antonov, and Alexander N. Vasil'ev
Nonlinear Couette flow in a dilute gas: Comparison between theory and molecular-dynamics simulation 1836
J. M. Montanero and V. Garzó
Discretized integral hydrodynamics 1843
Víctor Romero-Rochín and J. Miguel Rubí
Refined similarity hypothesis and asymmetry of turbulence 1851
S. I. Vainshtein
Reference Soret coefficients of natural isotopes and diluted alloys of tin 1866
S. Van Vaerenbergh, J. P. Garandet, J. P. Praizey, and J. C. Legros
Impulsive model for the Richtmyer-Meshkov instability 1874
Marc Vandenboomgaerde, Claude Mügler, and Serge Gauthier
Dynamical control for capturing vortices near bluff bodies 1883
Áron Péntek, James B. Kadtke, and Gianni Pedrizzetti
Electron-atom bremsstrahlung and the sonoluminescence of rare gas bubbles 1899
Lothar Frommhold
Robust reduced-order controller of laminar boundary layer transitions 1906
L. Cortelezzi and J. L. Speyer
Driven lattice gases with quenched disorder: Exact results and different macroscopic regimes 1911
Goutam Tripathy and Mustansir Barma
Route to chaos for a two-dimensional externally driven flow 1927
R. Braun, F. Feudel, and P. Guzdar
Direct correlation functions in two-dimensional anisotropic fluids 1933
Antoine Chamoux and Aurelien Perera
Effects of a large-scale mean circulating flow on passive scalar statistics in a model of random advection 1948
Emily S. C. Ching, C. S. Pang, and Gustavo Stolovitzky

PART B

Note to Reader i

Liquid crystals

Viscous properties of nematic liquid crystals composed of biaxial molecules 1955
Marcin Fiałkowski
Order distribution function of a linear polymerized photopolymer orienting a nematic liquid crystal 1967
A. Th. Ionescu, R. Barberi, M. Giocondo, M. Iovane, and A. L. Alexe-Ionescu
Coupled complex Ginzburg-Landau equations for the weak electrolyte model of electroconvection 1973
Martin Treiber and Lorenz Kramer
Dynamics of disordered patterns in electroconvection of homeotropically aligned nematic liquid crystals 1983
P. Tóth, Á. Buka, J. Peinke, and L. Kramer
Capillary filling of nematic liquid crystals 1992
Xiang-Dong Mi and Deng-Ke Yang
Dielectric spectroscopy of liquid crystals in smectic, nematic, and isotropic phases confined in random porous media 2001
G. P. Sinha and F. M. Aliev

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 58, NUMBER 2** **AUGUST 1998**

Fate of magnetic walls in nematic liquid crystals 2011
M. Simões, A. J. Palangana, and F. C. Cardoso
Formation of chevrons in the dielectric regime of electroconvection in nematic liquid crystals 2018
M. Scheuring, L. Kramer, and J. Peinke
Dynamic correlation functions for finite and infinite smectic-*A* systems: Theory and experiment 2027
A. Poniewierski, R. Hołyst, A. C. Price, L. B. Sorensen, S. D. Kevan, and J. Toner
Orientational susceptibility and elastic constants near the nematic-isotropic phase transition for trimers with terminal-lateral-lateral-terminal connections 2041
Daeseung Kang, Milind P. Mahajan, Rolfe G. Petschek, Charles Rosenblatt, Chaobin He, Puwei Liu, and A. C. Griffin
Electrohydrodynamic convection in liquid crystals driven by multiplicative noise: Sample stability 2047
Ulrich Behn, Adrian Lange, and Thomas John

Complex fluids, polymers, and granular materials

Long-time limit of rotational segregation of granular media 2061
Boris Levitan
Two-tier symmetry-breaking model of patterns on a catalytic surface 2065
L. M. Pismen, R. Imbihl, B. Y. Rubinstein, and M. I. Monin
Interface dynamics, instabilities, and solute bands in rapid directional solidification 2071
M. Conti
Exact calculation of force networks in granular piles 2079
G. Oron and H. J. Herrmann
Macroscopic equations of motion for two-phase flow in porous media 2090
R. Hilfer
Dynamics of foam drainage 2097
S. A. Koehler, H. A. Stone, M. P. Brenner, and J. Eggers
Cluster model for compaction of vibrated granular materials 2107
Konstantin L. Gavrilov
Bistability in non-Newtonian flow: Rheology of lyotropic liquid crystals 2115
Daniel Bonn, Jacques Meunier, Olivier Greffier, Amer Al-Kahwaji, and Hamid Kellay
Statistical simulations of diffusional coarsening in finite clusters 2119
H. Mandyam, M. E. Glicksman, J. Helsing, and S. P. Marsh
Test of mode coupling theory for a supercooled liquid of diatomic molecules. I. Translational degrees of freedom 2131
Stefan Kämmerer, Walter Kob, and Rolf Schilling
Test of mode coupling theory for a supercooled liquid of diatomic molecules. II. q-dependent orientational correlators 2141
Stefan Kämmerer, Walter Kob, and Rolf Schilling
Two-exponential correlation functions near the critical point of a micellar system 2151
Ana Martín, Arturo G. Casielles, Mercedes G. Muñoz, Francisco Ortega, and Ramón G. Rubio
Time-resolved studies of stick-slip friction in sheared granular layers 2161
S. Nasuno, A. Kudrolli, A. Bak, and J. P. Gollub
Effect of chiral interactions on the structure of Langmuir monolayers 2172
E. Scalas, G. Brezesinski, V. M. Kaganer, and H. Möhwald
Fluctuation mechanism of the dielectric polarization of water-in-oil microemulsions with ionic surfactant 2179
Nick Kozlovich, Alexander Puzenko, Yuriy Alexandrov, and Yuri Feldman
Crossover from Ising to mean-field critical behavior in an aqueous electrolyte solution 2188
J. Jacob, A. Kumar, M. A. Anisimov, A. A. Povodyrev, and J. V. Sengers
Liquid-vapor phase behavior of a symmetrical binary fluid mixture 2201
N. B. Wilding, F. Schmid, and P. Nielaba

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 58, NUMBER 2** **AUGUST 1998**

Multifractal analysis of the spatial distribution of the film surfaces with different roughening mechanisms 2213
J. G. Hou, Wang Yan, Xia Rui, Zhu Xiaoguang, Wang Haiqian, and Z. Q. Wu
Simulating temporal evolution of pressure in two-phase flow in porous media 2217
Eyvind Aker, Knut Jørgen Måløy, and Alex Hansen
Nonlocal pseudopotential calculation for the electron-ion correlation in liquid metals 2227
S. K. Lai, K. Horii, and M. Iwamatsu
Monte Carlo study of structural ordering in charged colloids using a long-range attractive interaction 2237
B. V. R. Tata and Norio Ise
Energy nonequipartition in systems of inelastic, rough spheres 2247
Sean McNamara and Stefan Luding
Equation of state for fluid mixtures of hard spheres and linear homonuclear fused hard spheres 2251
J. Largo and J. R. Solana

Biological physics

Lipid bilayer dynamics from simultaneous analysis of orientation and frequency dependence of deuterium spin-lattice and quadrupolar order relaxation 2259
Alexander A. Nevzorov, Theodore P. Trouard, and Michael F. Brown
Stochastic dynamics of the diffusive Haken model with subthreshold periodic forcing 2282
Paul C. Bressloff and Peter Roper
Photon-density wave correlation spectroscopy detects large-scale fluctuations in turbid media 2288
V. Toronov, M. Filiaci, S. Fantini, and E. Gratton
Multilayer perceptrons may learn simple rules quickly 2298
R. Urbanczik
Mean-field theory of Boltzmann machine learning 2302
Toshiyuki Tanaka
Fluid lipid bilayers: Intermonolayer coupling and its thermodynamic manifestations 2311
Per Lyngs Hansen, Ling Miao, and John Hjort Ipsen
Temporal segmentation of the stochastic oscillator neural network 2325
Seung Kee Han, Won Sup Kim, and Hyungtae Kook
On-line Gibbs learning. I. General theory 2335
H. Sompolinsky and J. W. Kim
On-line Gibbs learning. II. Application to perceptron and multilayer networks 2348
J. W. Kim and H. Sompolinsky
Electric field induced in cells in the human body when this is exposed to low-frequency electric fields 2363
Ronold W. P. King and Tai Tsun Wu
Binding of the water of primary hydration to the sodium and cesium salts of deoxyribonucleic acid and potassium hyaluronate 2370
K. B. Whitson, A. M. Lukan, R. L. Marlowe, S. A. Lee, L. Anthony, and A. Rupprecht
Learning in the hypercube: A stepping stone to the binary perceptron 2378
M. Bouten, L. Reimers, and B. Van Rompaey
DNA strand separation studied by single molecule force measurements 2386
U. Bockelmann, B. Essevaz-Roulet, and F. Heslot
Radiative transport in the diffusion approximation: An extension for highly absorbing media and small source-detector separations 2395
V. Venugopalan, J. S. You, and B. J. Tromberg

Plasma physics

Electronic transmission properties in a mesoscopic necklace with nonlinear impurities 2408
Zhiwen Pan, Shijie Xiong, and Changde Gong

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 58, NUMBER 2** **AUGUST 1998**

Dissipative drift waves in partially ionized plasmas containing high-*Z* impurities or dust 2415
S. V. Vladimirov and V. N. Tsytovich
Skin effect in strongly inhomogeneous laser plasmas with weakly anisotropic temperature distribution 2424
A. A. Andreev, K. Yu. Platonov, and J.-C. Gauthier
Surface waves at the interface of a dusty plasma and a metallic wall 2431
K. N. Ostrikov, M. Y. Yu, and N. A. Azarenkov
Generation of ultrashort light pulses by a rapidly ionizing thin foil 2436
D. Bauer, R. R. E. Salomaa, and P. Mulser
Breakdown of the line-space concept in Stark broadening of spectral lines by plasmas 2441
Richard W. Lee and Eugene Oks
Debye-Onsager relaxation effect in fully ionized plasmas 2446
A. Esser and G. Röpke
Model for fast electrons in ultrashort-pulse laser interaction with solid targets 2456
Wei Yu, M. Y. Yu, Z. M. Sheng, and J. Zhang
Analytical calculation of the amplification and angular divergence of the stimulated backscattered light from a Gaussian hot spot 2461
Laurent Divol and Philippe Mounaix
Magnetic field in short-pulse high-intensity laser-solid experiments 2471
A. R. Bell, J. R. Davies, and S. M. Guerin
Transverse quasilinear relaxation in an inhomogeneous magnetic field 2474
Maxim Lyutikov

Physics of beams

Dispersive lattice functions in a six-dimensional pseudo-harmonic-oscillator 2481
Étienne Forest
Growth rate of nonthermodynamic emittance of intense electron beams 2489
Bruce E. Carlsten
Intensity effects on inverse-bremsstrahlung electron acceleration 2501
R. Pakter

Classical physics, including nonlinear media

Experimental proof of standard electrodynamics by measuring the self-force on a part of a current loop 2505
G. Cavalleri, G. Bettoni, E. Tonni, and G. Spavieri
Solutions to the optical cascading equations 2518
S. Lafortune, P. Winternitz, and C. R. Menyuk
Linearizability of the perturbed Burgers equation 2526
R. A. Kraenkel, J. G. Pereira, and E. C. de Rey Neto
Highly directive current distributions: General theory 2531
Dionisios Margetis, George Fikioris, John M. Myers, and Tai Tsun Wu
Fast solitary waves against slow inertial instability in stimulated Raman scattering 2548
Antonio Picozzi, Carlos Montes, and Eric Picholle
Breather scattering by impurities in the sine-Gordon model 2558
Fei Zhang
Internal vibrations of a vector soliton in the coupled nonlinear Schrödinger equations 2564
Boris A. Malomed and Richard S. Tasgal
Reconnection of vortex filaments in the complex Ginzburg-Landau equation 2576
Michael Gabbay, Edward Ott, and Parvez N. Guzdar

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 58, NUMBER 2** **AUGUST 1998**

Stability of spiral wave vortex filaments with phase twists 2580
Keeyeol Nam, Edward Ott, Parvez N. Guzdar, and Michael Gabbay

Computational physics

Hurst's rescaled range statistical analysis for pseudorandom number generators used in physical simulations 2586
B. M. Gammel

Efficient Monte Carlo methods for the simulation of catalytic surface reactions 2598
J. J. Lukkien, J. P. L. Segers, P. A. J. Hilbers, R. J. Gelten, and A. P. J. Jansen

Algorithms for Brownian dynamics simulation 2611
A. C. Brańka and D. M. Heyes

Monte Carlo studies of adsorbed monolayers: Lattice-gas models with translational degrees of freedom 2616
M. Presber, B. Dünweg, and D. P. Landau

BRIEF REPORTS

General methods of statistical physics

The Kawasaki distribution function for nonautonomous systems 2624
Janka Petravic and Denis J. Evans

Effective magnetic Hamiltonian and Ginzburg criterion for fluids 2628
Nikolai V. Brilliantov

Dissipative quantum tunneling of two-level systems driven by dc-ac fields 2632
Hao Wang, Valder N. Freire, and Xian-Geng Zhao

Chaos and nonlinear dynamical systems

Low-frequency fluctuations in semiconductor lasers with optical feedback are induced with noise 2636
Manuel C. Eguia, G. B. Mindlin, and M. Giudici

State-space prediction model for chaotic time series 2640
A. K. Alparslan, M. Sayar, and A. R. Atilgan

Superposition of chaotic processes with convergence to Lévy's stable law 2644
Ken Umeno

Classical fluids

Long-range interactions in xenon 2648
F. Formisano, F. Barocchi, and R. Magli

Complex fluids, polymers, and granular materials

Born-Green-Yvon approach to the local densities of a simple fluid in a slitlike pore filled with a quenched disordered matrix 2652
Stefan Sokołowski and Orest Pizio

Topological correlations in soap froths 2656
K. Y. Szeto, T. Aste, and W. Y. Tam

Multifractal expansions and kinetic surface roughening processes 2660
A. Bershadskii

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 58, NUMBER 2** **AUGUST 1998**

Biological physics

Finite-size scaling of the quasispecies model 2664
P. R. A. Campos and J. F. Fontanari

Cumulative Author Index 2668
