THIRD SERIES, VOLUME 58, NUMBER 3
PARTS A AND B

CONTENTS

SEPTEMBER 1998

*The Table of Contents is a total listing of Parts A and B.
Part A consists of pages R2673–3228, and Part B pages 3229–4052.*

PART A

Note to Reader i

RAPID COMMUNICATIONS

General methods of statistical physics

- Influence of long-range interactions on the critical behavior of systems with a negative Fisher exponent R2673
H. K. Janssen
- Rare events and breakdown of simple scaling in the Abelian sandpile model R2677
M. De Menech, A. L. Stella, and C. Tebaldi
- Exactly solvable three-dimensional lattice model with attractive and repulsive interactions R2681
B. I. Lev
- Diffusive persistence and the “sign-time” distribution R2685
T. J. Newman and Z. Toroczkai
- Attraction and repulsion of spiral waves by localized inhomogeneities in excitable media R2689
Alberto P. Muñuzuri, Vicente Pérez-Muñuzuri, and Vicente Pérez-Villar

Chaos and nonlinear dynamical systems

- Chaotic dynamics in billiards using Bohm’s quantum mechanics R2693
O. F. de Alcantara Bonfim, J. Florencio, and F. C. Sá Barreto
- Stochastic resonance in a chaotic laser R2697
A. N. Pisarchik and R. Corbalán
- Periodic orbit theory for resonant tunneling diodes: Comparison with quantum and experimental results R2701
D. S. Saraga, T. S. Monteiro, and D. C. Rouben

Classical fluids

- How important are shock waves to single-bubble sonoluminescence? R2705
H. Y. Cheng, M.-C. Chu, P. T. Leung, and L. Yuan
- Compressible Alfven turbulence in one dimension R2709
J. Fleischer and P. H. Diamond
- Measured pulse width of sonoluminescence flashes in the form of resonance radiation R2713
Asis Giri and Vijay H. Arakeri

Liquid crystals

- Dynamic light scattering studies of cholesteric and polymer-stabilized cholesteric liquid crystals R2717
Redouane Borsali, Uwe P. Schroeder, Do Y. Yoon, and R. Pecora

Experimental characterization of layer thinning transitions	R2721
S. Pankratz, P. M. Johnson, H. T. Nguyen, and C. C. Huang	

Complex fluids, polymers, and granular materials

Dynamics of fractal sol-gel polymeric clusters	R2725
A. G. Zilman and R. Granek	
Theory of slow dynamics in highly charged colloidal suspensions	R2729
Michio Tokuyama	

Biological physics

“Sticky hard spheres” model of proteins near crystallization: A test based on the osmotic compressibility of lysozyme solutions	R2733
Roberto Piazza, Véronique Peyre, and Vittorio Degiorgio	

Physics of beams

Diamagnetic fields due to finite-dimension intense beams in high-gain free-electron lasers	R2737
J. B. Rosenzweig and P. Musumeci	

Classical physics, including nonlinear media

Stability of compacton solutions	R2741
Bishwajyoti Dey and Avinash Khare	
Formation, motion, and decay of vectorial cavity solitons	R2745
U. Peschel, D. Michaelis, C. Etrich, and F. Lederer	

ARTICLES

General methods of statistical physics

Graphical representations and cluster algorithms for critical points with fields	2749
O. Redner, J. Machta, and L. F. Chayes	
Phase transitions in the Potts spin-glass model	2753
Giancarlo Franzese and Antonio Coniglio	
Transition caused by multiplicative noises for finite globally coupled oscillators	2760
J. H. Li and Z. Q. Huang	
Phase separation and coarsening in one-dimensional driven diffusive systems: Local dynamics leading to long-range Hamiltonians	2764
M. R. Evans, Y. Kafri, H. M. Koduvely, and D. Mukamel	
Determination of the Hurst exponent by use of wavelet transforms	2779
Ingve Simonsen, Alex Hansen, and Olav Magnar Nes	
Biased random walk in energetically disordered lattices	2788
Issak Avramov, Andrey Milchev, Eleni Arapaki, and Panos Argyrakis	
Accelerated, decelerated, and oscillating fronts in a globally coupled bistable semiconductor system	2796
M. Meixner, P. Rodin, and E. Schöll	
Viscoelastic effects on the dynamic susceptibility of a Brownian particle in an external potential	2808
Jean-Louis Déjardin	
Carnot’s theorem as Noether’s theorem for thermoacoustic engines	2818
Eric Smith	
Brownian motion in short range random potentials	2833
A. H. Romero and J. M. Sancho	

Nonequilibrium transitions for a stochastic globally coupled model	2838
J. H. Li, Z. Q. Huang, and D. Y. Xing	
Analytical study of coupled two-state stochastic resonators	2843
Udo Siewert and Lutz Schimansky-Geier	
Explicit time and space dependence of ballistic molecular heat pulses	2853
T. Paszkiewicz and M. Pruchnik	
Accurate quantum and statistical mechanics from system-specific operator expansions	2859
Alexander N. Drozdov and J. Javier Brey	
Theory of non-Markovian activated rate processes for an arbitrarily shaped potential barrier	2865
Alexander N. Drozdov	
Analytical results for the steady state of traffic flow models with stochastic delay	2876
Bing-Hong Wang, Lei Wang, P. M. Hui, and Bambi Hu	
Expansion and contraction of avalanches in the two-dimensional Abelian sandpile	2883
D. V. Ktitarov and V. B. Priezhev	
Distribution of avalanches in interfacial motion in a porous medium	2889
Andrew Dougherty and Nathan Carle	
Collectivity, phase transitions, and exceptional points in open quantum systems	2894
W. D. Heiss, M. Müller, and I. Rotter	
Effective potential, critical point scaling, and the renormalization group	2902
Joseph Rudnick, William Lay, and David Jasnow	
Refraction of waves in excitable media	2910
Leonid Pechenik and Herbert Levine	
Reaction zones and quenched charged-particle systems with long-range interactions	2918
A. D. Rutenberg	
Rocked quantum periodic systems in the presence of coordinate-dependent friction	2931
J. D. Bao, Y. Abe, and Y. Z. Zhuo	
Self-averaging, distribution of pseudocritical temperatures, and finite size scaling in critical disordered systems	2938
Shai Wiseman and Eytan Domany	
Signal transmission in one-way coupled bistable systems: Noise effect	2952
Ying Zhang, Gang Hu, and Luca Gammaitoni	
Logarithmic corrections of the avalanche distributions of sandpile models at the upper critical dimension	2957
S. Lübeck	
Second quantization of open systems using quasinormal modes	2965
K. C. Ho, P. T. Leung, Alec Maassen van den Brink, and K. Young	
First-order wetting of rough substrates and quantum unbinding	2979
Attilio L. Stella and Giovanni Sartoni	
Chaos and nonlinear dynamical systems	
Multiplicative semiclassical dynamics and the quantization time	2983
L. Kaplan	
Polarization patterns in Kerr media	2992
Miguel Hoyuelos, Pere Colet, Maxi San Miguel, and Daniel Walgraef	
Different routes to chaos via strange nonchaotic attractors in a quasiperiodically forced system	3008
A. Venkatesan and M. Lakshmanan	
Synchronizing spatiotemporal chaos in coupled map lattices via active-passive decomposition	3017
Wang Jinlan, Chen Guangzhi, Qin Tuanfa, Ni Wansun, and Wang Xuming	
Digital communication by active-passive-decomposition synchronization in hyperchaotic systems	3022
Yu Zhang, Ming Dai, Yiman Hua, Wansun Ni, and Gonghuan Du	

Bifurcations and transitions to chaos in an inverted pendulum	3028
Sang-Yoon Kim and Bambi Hu	
Noise-induced stabilization of one-dimensional discontinuous maps	3036
Renate Wackerbauer	
Resonance energy transfers in the induction phenomenon in quartic Fermi-Pasta-Ulam chains	3045
G. Christie and B. I. Henry	
Decentralized delayed-feedback control of a coupled map model for open flow	3055
Keiji Konishi, Michio Hirai, and Hideki Kokame	
Basin bifurcation in quasiperiodically forced systems	3060
Ulrike Feudel, Annette Witt, Ying-Cheng Lai, and Celso Grebogi	
Synchronization of coupled time-delay systems: Analytical estimations	3067
K. Pyragas	

Classical fluids

Ergodic-nonergodic phase diagram for a concentrated suspension of charge-stabilized colloids: Rescaled mean spherical approximation	3072
S. K. Lai and G. F. Wang	
Structural precursor to freezing in the hard-disk and hard-sphere systems	3083
Thomas M. Truskett, Salvatore Torquato, Srikanth Sastry, Pablo G. Debenedetti, and Frank H. Stillinger	
Secondary instability mode of a roll pattern and transition to spatiotemporal chaos in the Taylor-Dean system . . .	3089
Patrick Bot, Olivier Cadot, and Innocent Mutabazi	
Equivalence of energy, entropy, and thermodynamic potentials in relation to the thermodynamic equilibrium of multitemperature gas mixtures	3098
D. Giordano	
Anomalous scalings for fluctuations of inertial particles concentration and large-scale dynamics	3113
Tov Elperin, Nathan Kleeorin, and Igor Rogachevskii	
Fronts, domain growth, and dynamical scaling in a $d=1$ nonpotential system	3125
R. Gallego, M. San Miguel, and R. Toral	
Freezing and clustering transitions for penetrable spheres	3135
C. N. Likos, M. Watzlawek, and H. Löwen	
Resonant mode interactions in Rayleigh-Bénard convection	3145
Joana Prat, Isabel Mercader, and Edgar Knobloch	
Dimers in nucleating vapors	3157
A. A. Lushnikov and M. Kulmala	
Boundary limitation of wave numbers in Taylor-vortex flow	3168
Marcus Linek and Guenter Ahlers	
Stability of the order-order critical points of Heisenberg and nematic model fluids	3175
J. M. Tavares, P. I. C. Teixeira, and M. M. Telo da Gama	
Circulation statistics in three-dimensional turbulent flows	3187
L. Moriconi and F. I. Takakura	
Hydrodynamic instabilities and Soret effect in an aqueous electrolyte	3202
J. Colombani, H. Dez, J. Bert, and J. Dupuy-Philon	
Two kinetic temperature description for shock waves	3209
F. J. Uribe, R. M. Velasco, and L. S. García-Colín	
Reactive turbulent flow in low-dimensional, disordered media	3223
Michael W. Deem and Jeong-Man Park	

PART B

Note to Reader	i
----------------------	---

Liquid crystals

Bicritical points in a nematic rod-disk mixture	3229
Agnieszka Chrzanowska	
Directional energy transfer in columnar liquid crystals: A computer-simulation study	3237
Corrado Bacchiocchi and Claudio Zannoni	
Elastic constants in a pseudomolecular approach for a mixed Maier-Saupe and Nehring-Saupe interaction law . . .	3245
L. R. Evangelista, I. Hibler, and H. Mukai	
Miesowicz viscosities study of a two-component thermotropic mixture	3251
Joanna Janik, Jozef K. Moscicki, Krzysztof Czuprynski, and Roman Dabrowski	
Orientational capillary pressure on a nematic point defect	3259
G. Guidone Peroli, G. Hillig, A. Saupe, and E. G. Virga	
Optic models for short-pitch cholesteric and chiral smectic liquid crystals	3264
Pascal Hubert, Pontus Jägemalm, Claudio Oldano, and Mauro Rajteri	
Imprinting of nematic order at surfaces created by polymerization-induced phase separation	3273
Karl R. Amundson	
Reorientation gratings in polymer dispersed liquid crystals	3280
L. Vicari	
Computer simulation of an unconfined liquid crystal film	3284
Stuart J. Mills, Christopher M. Care, Maureen P. Neal, and Douglas J. Cleaver	
Pretilt angle generation on photoreactive polymer films	3295
H. G. Galabova, D. W. Allender, and J. Chen	

Complex fluids, polymers, and granular materials

Anisotropy-driven dynamics of cellular fronts in directional solidification in thin samples	3302
Silvère Akamatsu and Gabriel Faivre	
Interfacial compositions of solid and liquid in a phase-field model with finite interface thickness for isothermal solidification in binary alloys	3316
Seong Gyoan Kim, Won Tae Kim, and Toshio Suzuki	
Generalized model of irreversible multilayer deposition	3324
Shaoxiong Yang, Pascal Viot, and Paul R. Van Tassel	
Analytical structure factors for colloidal fluids with size and interaction polydispersities	3329
M. Ginoza and M. Yasutomi	
Numerical study of geometrical dispersion in self-affine rough fractures	3334
Franck Plouraboué, Jean-Pierre Hulin, Stéphane Roux, and Joel Koplik	
Molecular dynamics study of the vulcanization transition	3347
Michael Plischke and Sandra J. Barsky	
First-order versus second-order interface localization transition of thin Ising films with competing walls	3353
Alan M. Ferrenberg, D. P. Landau, and K. Binder	
Dynamics of granular stratification	3357
Hernán A. Makse, Robin C. Ball, H. Eugene Stanley, and Stephen Warr	
Mixed mobile ion effect: A numerical study on the basis of a modified two-spin facilitated kinetic Ising model	3368
Beatrix Schulz, Michael Schulz, and Steffen Trimper	
Particle dynamics in magnetorheological suspensions using diffusing-wave spectroscopy	3372
Eric M. Furst and Alice P. Gast	
Model of clustering in the string phase of a shearing hard sphere colloidal dispersion	3377
R. S. Farr	

Asymptotic laws for tagged-particle motion in glassy systems	3384
M. Fuchs, W. Götze, and M. R. Mayr	
Effect of confinement on charge-stabilized colloidal suspensions between two charged plates	3400
J. Chakrabarti and H. Löwen	
Thermodynamic properties of a lattice model of aqueous mixtures	3405
Radhika Sharma and Deepak Kumar	
Homogeneous cooling of rough, dissipative particles: Theory and simulations	3416
S. Luding, M. Huthmann, S. McNamara, and A. Zippelius	
Liquid-solid transition of the ferromagnetic Heisenberg fluid: Simulation, density functional, and perturbation theories	3426
E. Lomba, J. J. Weis, and C. F. Tejero	
Solute trapping and solute drag in a phase-field model of rapid solidification	3436
N. A. Ahmad, A. A. Wheeler, W. J. Boettinger, and G. B. McFadden	
Development of a picture of the van der Waals interaction energy between clusters of nanometer-range particles	3451
V. Arunachalam, W. H. Marlow, and J. X. Lu	
Stochastic geometry of polygonal networks: An alternative approach to the hexagon-square transition in Bénard convection	3458
Uwe Thiele and Kerstin Eckert	
Onset of polymer entanglement	3469
Shirish M. Chitanvis	
Integral equation and simulation studies of the Heisenberg spin fluid in an external magnetic field	3478
F. Lado, E. Lomba, and J. J. Weis	
Sol-gel transition of reversible cluster-cluster aggregations	3490
Takamichi Terao and Tsuneyoshi Nakayama	
Stability of cylindrical domains in phase-separating binary fluids in shear flow	3495
Amalie Frischknecht	
Dynamics of highly supercooled liquids: Heterogeneity, rheology, and diffusion	3515
Ryoichi Yamamoto and Akira Onuki	
Polydisperse adsorption: Pattern formation kinetics, fractal properties, and transition to order	3530
N. V. Brilliantov, Yu. A. Andrienko, P. L. Krapivsky, and J. Kurths	
Biological physics	
Kinetics of structural changes in superhelical DNA	3537
Gero Wedemann, Christian Munkel, Gunther Schöppe, and Jörg Langowski	
Steady-state organization of binary mixtures by active impurities	3547
Mads C. Sabra, Henriette Gilhøj, and Ole G. Mouritsen	
Effect of interaction energy fluctuation on the folding of a proteinlike model	3552
Zhongwen Xing, Jun Wang, and Wei Wang	
Steady states and global dynamics of electrical activity in the cerebral cortex	3557
P. A. Robinson, C. J. Rennie, J. J. Wright, and P. D. Bourke	
Mapping of mutation-sensitive sites in proteinlike chains	3572
M. Skorobogatiy and G. Tiana	
Characterizing self-similarity in bacteria DNA sequences	3578
Xin Lu, Zhirong Sun, Huimin Chen, and Yanda Li	
Experimental tests of the Peyrard-Bishop model applied to the melting of very short DNA chains	3585
Alessandro Campa and Andrea Giansanti	
Coarse grained description of protein folding	3589
Marek Cieplak and Trinh Xuan Hoang	

Spontaneous oscillations in a nonlinear delayed-feedback shunting model of the pupil light reflex	3597
P. C. Bressloff and C. V. Wood	
Learnability of periodic activation functions: General results	3606
Michal Rosen-Zvi, Michael Biehl, and Ido Kanter	
Noise-induced coherent oscillations in randomly connected neural networks	3610
J. Pham, K. Pakdaman, and J.-F. Vibert	
Transient regime duration in continuous-time neural networks with delay	3623
K. Pakdaman, C. Grotta-Ragazzo, and C. P. Malta	
Associative memory based on synchronized firing of spiking neurons with time-delayed interactions	3628
Masahiko Yoshioka and Masatoshi Shiino	
Non-Gaussian statistics of anomalous diffusion: The DNA sequences of prokaryotes	3640
Paolo Allegrini, Marco Buiatti, Paolo Grigolini, and Bruce J. West	
Pattern recognition in a neural network with chaos	3649
Z. Tan and M. K. Ali	
Computer simulation of ion conductance in membrane channels	3654
Matthew Hoyles, Serdar Kuyucak, and Shin-Ho Chung	
Ripple phase formation in phosphatidylcholine: Effect of acyl chain relative length, position, and unsaturation . . .	3662
Beth A. Cunningham, Ari-David Brown, David H. Wolfe, W. Patrick Williams, and Anthony Brain	
Formation and dynamics of modules in a dual-tasking multilayer feed-forward neural network	3673
Chi-Hang Lam and F. G. Shin	
Plasma physics	
On-off intermittencies in gas discharge plasma	3678
D. L. Feng, C. X. Yu, J. L. Xie, and W. X. Ding	
Stopping of charged particles in a magnetized classical plasma	3686
H. B. Nersisyan	
Nonmodal energetics of resistive drift waves	3693
Suzana J. Camargo, Michael K. Tippet, and Iberê L. Caldas	
Energy relaxation and the quasiequation of state of a dense two-temperature nonequilibrium plasma	3705
M. W. C. Dharma-wardana and François Perrot	
Theory and simulation of the interaction of ultraintense laser pulses with electrons in vacuum	3719
Brice Quesnel and Patrick Mora	
Instability due to the dust-particulate-phonon interaction	3733
Osamu Ishihara	
Measurement of the expansion of an aluminum plasma heated by <i>M</i> -band x rays	3739
T. S. Perry, R. I. Klein, D. R. Bach, K. S. Budil, R. Cauble, H. N. Kornblum, Jr., R. J. Wallace, and R. W. Lee	
Model of hydrodynamic perturbation growth in the start-up phase of laser implosion	3744
R. Ishizaki and K. Nishihara	
Separatrix crossing and large scale diffusion in low-frequency three-wave systems	3768
B. Weyssow, J. D. Reuss, and J. Misguich	
Electronic stopping power of plasma for heavy ions at low velocity	3777
Yuguang Mu, Ruijin Wang, Yueyuan Xia, Chunyu Tan, and Liangmo Mei	
Hamiltonian nontwist map for magnetic field lines with locally reversed shear in toroidal geometry	3781
R. Balescu	
Amplitude equation at ionization instability and the onset of turbulence in a neon glow discharge	3793
B. Bruhn, B.-P. Koch, and P. Jonas	
Equation of state of a strongly magnetized hydrogen plasma	3806
M. Steinberg, J. Ortner, and W. Ebeling	

Physics of beams

Theory of tapered cooling	3817
Hiromi Okamoto and Jie Wei	
Ginzburg-Landau model for mode competition and single-mode operation of a free-electron laser	3826
C. S. Ng and A. Bhattacharjee	

Classical physics, including nonlinear media

Solitons in anharmonic chains with power-law long-range interactions	3833
Serge F. Mingaleev, Yuri B. Gaididei, and Franz G. Mertens	
Two-dimensional noise-sustained structures in optical parametric oscillators	3843
Marco Santagiustina, Pere Colet, Maxi San Miguel, and Daniel Walgraef	
Strain solitary waves in an elastic rod embedded in another elastic external medium with sliding	3854
A. V. Porubov, A. M. Samsonov, M. G. Velarde, and A. V. Bukhanovsky	
Autoresonant solutions of the nonlinear Schrödinger equation	3865
L. Friedland	
Self-induced transparency solitary waves in a doped nonlinear photonic band gap material	3876
Neşet Aközbek and Sajeev John	
Photonic band gap formation in certain self-organizing systems	3896
Kurt Busch and Sajeev John	
Electromagnetic scattering in polarizable backgrounds	3909
Olivier J. F. Martin and Nicolas B. Piller	
Dynamics of self-trapped beams with phase dislocation in saturable Kerr and quadratic nonlinear media	3916
Dmitry V. Skryabin and William J. Firth	
Electromagnetic scattering by an aggregate of spheres: Theoretical and experimental study of the amplitude scattering matrix	3931
Yu-lin Xu and Ru T. Wang	

Computational physics

Numerical self-consistent-field method to solve the Kohn-Sham equations in confined many-electron atoms	3949
Jorge Garza, Rubicelia Vargas, and Alberto Vela	
Volumetric formulation of the lattice Boltzmann method for fluid dynamics: Basic concept	3955
Hudong Chen	
Atomic beam slowing and cooling: Discrete velocity model	3964
C. Reitshammer, F. Schürer, and A. Rossani	
Critical exponents and universal amplitude ratios in lattice trees	3971
S. You and E. J. Janse van Rensburg	
Introduction of the Liénard-Wiechert correction to the particle simulation of relativistic plasmas	3977
Luis Plaja and Enrique Conejero Jarque	
Computing the Kubo formula for large systems	3984
Tsuneyoshi Nakayama and Hiroyuki Shima	

BRIEF REPORTS**General methods of statistical physics**

Power-law behavior in a nonextremal Bak-Sneppen model	3993
Raffaele Cafiero, Paolo De Los Rios, Frank-Michael Dittes, Angelo Valleriani, and José Luis Vega	
Random-neighbor Olami-Feder-Christensen slip-stick model	3997
Osame Kinouchi, Suani T. R. Pinho, and Carmem P. C. Prado	

Critical behavior of the chain-generating function of self-avoiding walks on the Sierpinski gasket family: The Euclidean limit	4001
R. Riera and F. A. C. C. Chalub	
Short-term stability of patterns in intracavity vectorial second-harmonic generation	4005
C. Etrich, D. Michaelis, U. Peschel, and F. Lederer	
Chaos and nonlinear dynamical systems	
Interior crises in a dripping faucet experiment	4009
R. D. Pinto, W. M. Gonçalves, J. C. Sartorelli, I. L. Caldas, and M. S. Baptista	
Classical fluids	
Distribution of time-headways in a particle-hopping model of vehicular traffic	4012
Kingshuk Ghosh, Arnab Majumdar, and Debashish Chowdhury	
Heat flux at the transition from harmonic to chaotic flow in thermal convection	4016
V. M. Castillo and Wm. G. Hoover	
Evolution of a scalar gradient's probability density function in a random flow	4019
A. Fouxon	
Complex fluids, polymers, and granular materials	
Surface width scaling in noise reduced Eden clusters	4023
M. T. Batchelor, B. I. Henry, and S. D. Watt	
Lamellae stability in confined systems with gravity	4027
M. Bahiana and W. A. M. Morgado	
Plasma physics	
Frequency mixing of high intensity laser light with stimulated Raman backscattered radiation in underdense plasmas	4030
K. Krushelnick, C. I. Moore, A. Ting, and H. R. Burris	
Magnetic mirroring and cosmic ray pitch-angle diffusion	4033
Uwe Jaekel	
Computational physics	
Island size distributions in submonolayer growth with mobile islands and breakup	4037
I. Koponen, M. Rusanen, and J. Heinonen	
COMMENTS	
Comment on "Andronov bifurcation and excitability in semiconductor lasers with optical feedback"	4041
G. H. M. van Tartwijk and I. Fischer	
Reply to "Comment on 'Andronov bifurcation and excitability in semiconductor lasers with optical feedback' "	4043
M. Giudici, C. Green, G. Giacomelli, U. Nespolo, and J. R. Tredicce
