THIRD SERIES, VOLUME 59, NUMBER 1

CONTENTS

JANUARY 1999

*The Table of Contents is a total listing of Parts A and B.
Part A consists of pages R1–602, and Part B pages 603–1286.*

PART A

Guidelines for PRE Section Selection	iii
Physical Review E Editorial Policies and Practices	iv
Physical Review E Information for Contributors	viii
Guidelines for Estimating Length	xii
Note to Reader	xiii

RAPID COMMUNICATIONS

General methods of statistical physics

Heat conduction in the diatomic Toda lattice revisited	R1
Takahiro Hatano	
Definition of temperature in equilibrium and nonequilibrium systems	R5
Gary P. Morriss and Lamberto Rondoni	
Influence of a periodic field on two-level classical systems	R9
V. Berdichevsky and M. Gitterman	
Universality in sandpiles	R12
Alessandro Chessa, H. Eugene Stanley, Alessandro Vespignani, and Stefano Zapperi	
Two-dimensional self-avoiding walks on a cylinder	R16
Helge Frauenkron, Maria Serena Causo, and Peter Grassberger	
Statistics of persistent events: An exactly soluble model	R20
A. Baldassarri, J. P. Bouchaud, I. Dornic, and C. Godrèche	

Chaos and nonlinear dynamical systems

Quasipatterns in second-harmonic generation	R24
Stefano Longhi	
Globally coupled multiattractor maps: Mean field dynamics controlled by the number of elements	R28
Imre M. Jánosi and Jason A. C. Gallas	
Control of transients in “lethargic” systems	R32
G. L. Lippi, P. A. Porta, L. M. Hoffer, and H. Grassi	

Plasma physics

Steady magnetic field generation due to transient field ionization in ultrashort laser-solid interaction	R36
Andrea Macchi, Enrique Conejero Jarque, Dieter Bauer, Fulvio Cornolti, and Luis Plaja	

Physics of beams

- Nontrivial linear effects of dispersion at the interaction point R40
 Stefania Petracca and Kohji Hirata

Computational physics

- Molecular dynamics simulation with reversible heat addition R44
 Nicolas G. Hadjiconstantinou

ARTICLES**General methods of statistical physics**

- Exponential multiplicity of inherent structures 48
 Frank H. Stillinger
- Symmetry breaking in ionization wave turbulence 52
 S. Niedner, H.-G. Schuster, T. Klinger, and G. Bonhomme
- Percolation transition and the onset of nonexponential relaxation in fully frustrated models 60
 Annalisa Fierro, Giancarlo Franzese, Antonio de Candia, and Antonio Coniglio
- Quantum vortex sheets 67
 M. H. Chang, T. Chiueh, and C. R. Lo
- Persistence of collective fluctuations in N -body metaequilibrium gravitating and plasma systems 73
 J. L. Rouet and M. R. Feix
- Scaling of stiffness energy for three-dimensional $\pm J$ Ising spin glasses 84
 Alexander K. Hartmann
- Maxwell model of traffic flows 88
 E. Ben-Naim and P. L. Krapivsky
- Noise-induced fronts 98
 Miguel A. Santos and J. M. Sancho
- Resonant diffusion in a linear network of fluctuating obstacles 103
 Olivier Benichou, Bernard Gaveau, and Michel Moreau
- Stochastic theory of freeway traffic 117
 R. Mahnke and J. Kaupuzs
- Kinetics of ballistic annihilation and branching 126
 Pierre-Antoine Rey, Michel Droz, and Jarosław Piasecki
- Lobe dynamics and space charge distribution in nonsteady electroconvection 135
 A. T. Pérez, R. Chicón, and A. Castellanos
- Effect of Landauer's blow torch on the equilibration rate in a bistable potential 143
 Mulugeta Bekele, S. Rajesh, G. Ananthakrishna, and N. Kumar
- Thermodynamical behavior of aperiodic Ising models on hierarchical lattices 150
 R. F. S. Andrade
- Bose-Einstein condensation in arbitrarily shaped cavities 158
 Klaus Kirsten and David J. Toms
- Quantum gas in an external field: Exact grand canonical expressions and numerical treatment 168
 P. N. Vorontsov-Velyaminov, S. D. Ivanov, and R. I. Gorbunov
- Numerical analysis of the noisy Kuramoto-Sivashinsky equation in $2+1$ dimensions 177
 Jason T. Drotar, Y.-P. Zhao, T.-M. Lu, and G.-C. Wang

Large- q expansion of the specific heat for the two-dimensional q -state Potts model	186
H. Arisue and K. Tabata	
Evaporation and coarsening dynamics with open boundaries	189
A. M. Lacasta, F. Sagués, J. M. Sancho, and I. M. Sokolov	
Directed Ising type dynamic preroughening transition in one-dimensional interfaces	194
Jae Dong Noh, Hyunggyu Park, and Marcel den Nijs	
Multispecies asymmetric simple exclusion process and its relation to traffic flow	205
V. Karimipour	
Phase-ordering dynamics with an order-parameter-dependent mobility: The large- n limit	213
C. L. Emmott and A. J. Bray	
Nonequilibrium phase transition in the kinetic Ising model: Existence of a tricritical point and stochastic resonance	218
Muktish Acharyya	
Yang-Lee zeros of one-dimensional quantum many-body systems	222
Xian-Zhi Wang and Jai Sam Kim	
Quadratic fluctuation-dissipation theorem for multilayer plasmas	228
Kenneth I. Golden	
Anomalous dynamic scaling of interfaces in disordered media	234
Ning-Ning Pang and Wen-Jer Tzeng	
Derivation, properties, and simulation of a gas-kinetic-based, nonlocal traffic model	239
Martin Treiber, Ansgar Hennecke, and Dirk Helbing	
Multiaffinity and entropy spectrum of self-affine fractal profiles	254
Hiroaki Katsuragi and Haruo Honjo	
Phase separation in a simple model with dynamical asymmetry	263
Rajeev Ahluwalia	
Influence functional from a bath of coupled time-dependent harmonic oscillators	269
Jiushu Shao and Nancy Makri	
Thermodynamic depth of causal states: Objective complexity via minimal representations	275
James P. Crutchfield and Cosma Rohilla Shalizi	
Chaos and nonlinear dynamical systems	
Use of synchronization and adaptive control in parameter estimation from a time series	284
Anil Maybhate and R. E. Amritkar	
Quantum weak chaos in a degenerate system	294
V. Ya. Demikhovskii, D. I. Kamenev, and G. A. Luna-Acosta	
Classical and quantum chaos in the generalized parabolic lemon-shaped billiard	303
V. Lopac, I. Mrkonjić, and D. Radić	
Synchronization of chaotic maps through a noisy coupling channel with application to digital communication . . .	312
Ali A. Minai and Tirunelveli Anand	
Deformed Gaussian orthogonal ensemble and the statistical fluctuations in the spectra of the quartic oscillator . . .	321
C. I. Barbosa, C. L. Lima, M. S. Hussein, and M. P. Pato	
Spectral correlations in the crossover transition from a superposition of harmonic oscillators to the Gaussian unitary ensemble	330
Thomas Guhr and Thomas Papenbrock	
Fitting partial differential equations to space-time dynamics	337
Markus Bär, Rainer Hegger, and Holger Kantz	
Mixed basin boundary structures of chaotic systems	343
Epaminondas Rosa Jr. and Edward Ott	
Inertia effects on periodic synchronization in a system of coupled oscillators	353
H. Hong, M. Y. Choi, J. Yi, and K.-S. Soh	

Field driven thermostated systems: A nonlinear multibaker map	364
T. Gilbert, C. D. Ferguson, and J. R. Dorfman	
Dynamics of a reaction-diffusion system with Brusselator kinetics under feedback control	372
Iasson Karafyllis, Panagiotis D. Christofides, and Prodromos Daoutidis	
Role of aperiodic order for fluxon dynamics in Josephson junction arrays	381
Erik Lennholm and Michael Hörnquist	
Semiclassical sum rules for matrix elements and response functions in chaotic and in integrable quantum billiards	390
B. Mehlig	
Synchronization and directed percolation in coupled map lattices	409
Franco Bagnoli, Lucia Baroni, and Paolo Palmerini	

Classical fluids

Temperature measured close to the interface of an evaporating liquid	417
G. Fang and C. A. Ward	
Expression for predicting liquid evaporation flux: Statistical rate theory approach	429
C. A. Ward and G. Fang	
Examination of the statistical rate theory expression for liquid evaporation rates	441
G. Fang and C. A. Ward	
Simple lattice Boltzmann model for simulating flows with shock wave	454
Yan Guangwu, Chen Yaosong, and Hu Shouxin	
Self-diffusion in an isotopic fluid	460
Raman Sharma, K. Tankeshwar, and K. C. Sharma	
Curvature dependence of the surface tension of liquid and vapor nuclei	469
V. G. Baidakov and G. Sh. Boltachev	
Dissolving interfaces in the presence of gravity	476
D. H. Vlad and J. V. Maher	
Computer simulation study of the structure of the liquid-vapor interface of mercury at 20, 100, and 200 °C	479
Dmitriy S. Chekmarev, Meishan Zhao, and Stuart A. Rice	
Diverging correlation lengths in electrolytes: Exact results at low densities	492
Stefan Bekiranov and Michael E. Fisher	
Creep motion of a solidification front in a two-dimensional binary alloy	512
X. Feng, E. A. Brener, D. E. Temkin, Y. Saito, and H. Müller-Krumbhaar	
Point defects of a three-dimensional vector order parameter	528
Yishi Duan, Hong Zhang, and Libin Fu	

Liquid crystals

Role of side chains in phase equilibria of disklike mesogens	535
Maciej Wnek and Jozef K. Moscicki	
Rotational bias of an antiferroelectric liquid crystal studied by polarized Fourier transform infrared spectroscopy ..	551
A. Kocot, R. Wrzalik, B. Orgasinska, T. Perova, J. K. Vij, and H. T. Nguyen	
Corresponding states of fluid motion in nematic liquid crystals	556
M. Simões and A. A. Arroteia	
Instability of radial hedgehog configurations in nematic liquid crystals under Landau-de Gennes free-energy models	563
E. C. Gartland Jr. and S. Mkaddem	
Formation of disclination lines near a free nematic interface	568
Jordi Ignés-Mullol, Jean Baudry, Lubor Lejcek, and Patrick Oswald	

Measurements of anchoring energy of a nematic liquid crystal, 4-cyano-4'- <i>n</i> -pentylbiphenyl, on Langmuir-Blodgett films of dipalmitoyl phosphatidylcholine	578
U. Kühnau, A. G. Petrov, G. Klose, and H. Schmiedel	
Pattern formation and chiral phase separation by compression: Racemic monolayer viewed as Bragg-Williams binary cholesterics	586
Mitsumasa Iwamoto, Chen-Xu Wu, and Ou-Yang Zhong-can	
Interaction of foreign macrodroplets in a nematic liquid crystal and induced supermolecular structures	591
B. I. Lev and P. M. Tomchuk	

PART B

Note to Reader	i
--------------------------	---

Complex fluids, polymers, and granular materials

Dynamics of the phase behavior of a polymer blend under shear flow	603
Tao Sun, Anna C. Balazs, and David Jasnow	
Experimental determination of the cooperative length scale of a glass-forming liquid near the glass transition temperature	612
A. K. Rizos and K. L. Ngai	
Freezing of polydisperse hard spheres	618
David A. Kofke and Peter G. Bolhuis	
Calculation of the coherent dynamic structure factor of polyisoprene from molecular dynamics simulations	623
Neil E. Moe and M. D. Ediger	
Phase segregation in binary sandpiles on fractal bases	631
N. Vandewalle, R. D'hulst, and M. Ausloos	
Alternative off-lattice model with continuous backbone mass for polymers	636
Gunther Schöppe and Dieter W. Heermann	
Structure and dynamics of surfactant-stabilized aggregates of palladium nanoparticles under dilute and semidilute conditions: Static and dynamic x-ray scattering	642
T. Thurn-Albrecht, G. Meier, P. Müller-Buschbaum, A. Patkowski, W. Steffen, G. Grübel, D. L. Abernathy, O. Diat, M. Winter, M. G. Koch, and M. T. Reetz	
Bond fluctuation method for a polymer undergoing gel electrophoresis	650
Ryuzo Azuma and Hajime Takayama	
Kinetic description of a fluidized one-dimensional granular system	656
Rosa Ramírez and Patricio Cordero	
Aggregation phenomena in a lecithin-based gel: Transient networks and diffusional dynamics	665
F. Aliotta, M. E. Fontanella, M. Pieruccini, and C. Vasi	
Dendritic crystal growth for weak undercooling. II. Surface energy effects on nonlinear evolution	673
M. D. Kunka, M. R. Foster, and S. Tanveer	
Permeability of periodic porous media	711
F. J. Alcocer, V. Kumar, and P. Singh	
Emulsion glasses: A dynamic light-scattering study	715
Hu Gang, A. H. Krall, H. Z. Cummins, and D. A. Weitz	
Complex terraced spreading of perfluoropolyalkylether films on carbon surfaces	722
X. Ma, J. Gui, L. Smoliar, K. Grannen, B. Marchon, C. L. Bauer, and M. S. Jhon	
"Intrinsic" profiles and capillary waves at homopolymer interfaces: A Monte Carlo study	728
A. Werner, F. Schmid, M. Müller, and K. Binder	
Kinematics of a two-dimensional granular Couette experiment at the transition to shearing	739
C. T. Veje, Daniel W. Howell, and R. P. Behringer	
Droplet spreading on heterogeneous substrates using molecular dynamics	746
M. H. Adão, M. de Ruijter, M. Voué, and J. De Coninck	

Magnetic-field-induced nonequilibrium structures in a ferrofluid emulsion	751
George A. Flores, Jing Liu, M. Mohebi, and N. Jamasbi	
Phase separations and orientational ordering of polymers in liquid crystal solvents	763
Akihiko Matsuyama and Tadayo Kato	
Molecular segregation in lyotropic complex fluids: A phenomenological approach	771
V. P. Dmitriev, P. Tolédano, A. M. Figueiredo Neto, and I. V. Lebedyuk ³	
Experimental study of a granular flow in a vertical pipe: A spatiotemporal analysis	778
Jean-Luc Aider, Nathalie Sommer, Tareck Raafat, and Jean-Pierre Hulin	
Crystallization and vitrification of semiflexible living polymers: A lattice model	787
Gautam I. Menon and Rahul Pandit	
Model for faceting in a kinetically controlled crystal growth	803
A. A. Golovin, S. H. Davis, and A. A. Nepomnyashchy	
Kinetic growth of field-oriented chains in dipolar colloidal solutions	826
M.-Carmen Miguel and R. Pastor-Satorras	
Temperature oscillations of hydrothermal waves in thermocapillary-buoyancy convection	835
Miguel Angel Pelacho and Javier Burguete	
Smoluchowski hypernetted chain theory description of the dynamics of ions confined in charged micropores	841
Pedro J. Colmenares and Wilmer Olivares-Rivas	
Nucleation of oscillons	850
Seong-Ok Jeong and Hie-Tae Moon	
Probability density function modeling of dispersed two-phase turbulent flows	855
Jacek Pozorski and Jean-Pierre Minier	
Wetting transitions of Ne	864
M. J. Bojan, G. Stan, S. Curtarolo, W. A. Steele, and M. W. Cole	
Magnetic-resonance determination of the spatial dependence of the droplet size distribution in the cream layer of oil-in-water emulsions: Evidence for the effects of depletion flocculation	874
P. J. McDonald, E. Ciampi, J. L. Keddie, M. Heidenreich, and R. Kimmich	
Chain confinement effects on interdiffusion in polymer multilayers	885
E. Sivaniah, M. Sferrazza, R. A. L. Jones, and D. G. Bucknall	
Simulation of a two-dimensional shear cell	889
Steffen Schöllmann	

Biological physics

Coupling of intramolecular and intermolecular linkage complexity of two DNAs	900
John F. Marko	
Classification of microtubule histories	913
D. J. Bicout and R. J. Rubin	
Small-angle scattering studies of the fully hydrated phospholipid DPPC	921
P. C. Mason, B. D. Gaulin, R. M. Epand, G. D. Wignall, and J. S. Lin	
Nonlinear models for detecting epileptic spikes	929
L. Diambra and C. P. Malta	
Scaling behavior of stochastic minimization algorithms in a perfect funnel landscape	938
K. Hamacher and W. Wenzel	
New proteinlike properties of cubic lattice models	942
Georges Trinquier and Yves-Henri Sanejouand	
Optimally adapted multistate neural networks trained with noise	947
R. Erichsen, Jr. and W. K. Theumann	
Synthetic analysis of periodically stimulated excitable and oscillatory membrane models	956
K. Yoshino, T. Nomura, K. Pakdaman, and S. Sato	

Folding in two-dimensional off-lattice models of proteins	970
Mai Suan Li and Marek Cieplak	
Statistical properties of contact maps	977
Michele Vendruscolo, Balakrishna Subramanian, Ido Kanter, Eytan Domany, and Joel Lebowitz	
Optimal asymptotic learning rate: Macroscopic versus microscopic dynamics	985
Todd K. Leen, Bernhard Schottky, and David Saad	
Recurrence quantification analysis as a tool for characterization of molecular dynamics simulations	992
Cesare Manetti, Marc-Antoine Ceruso, Alessandro Giuliani, Charles L. Webber, Jr., and Joseph P. Zbilut	
Equation of state for polymer liquid crystals: Theory and experiment	999
H. H. Strey, V. A. Parsegian, and R. Podgornik	
Pattern formation of a reaction-diffusion system with self-consistent flow in the amoeboid organism <i>Physarum</i> plasmodium	1009
Hiroyasu Yamada, Toshiyuki Nakagaki, and Masami Ito	

Plasma physics

Dielectric properties of interacting storage ring plasmas	1015
A. Selchow and K. Morawetz	
Pressure ionization in dense plasmas	1024
G. Chiu and A. Ng	
Electromagnetically induced guiding of counterpropagating lasers in plasmas	1033
G. Shvets and A. Pukhov	
Stimulated Brillouin backscattering from underdense expanding plasmas in a regime of strong filamentation	1038
A. Giulietti, A. Macchi, E. Schifano, V. Biancalana, C. Danson, D. Giulietti, L. A. Gizzi, and O. Willi	
Instabilities in a dusty plasma with ion drag and ionization	1047
D. Samsonov and J. Goree	
Experimental test of models of high-plasma-density, radio-frequency sheaths	1059
Mark A. Sobolewski	
Electrical conductivity of dense metal plasmas	1073
Ronald Redmer	
Nonparaxial propagation of ultrashort laser pulses in plasma channels	1082
E. Esarey and W. P. Leemans	
Observation of nonthermal turbulent electric fields in a nanosecond plasma opening switch experiment	1096
A. Weingarten, S. Alexiou, Y. Maron, M. Sarfaty, Ya. E. Krasik, and A. S. Kingsep	
Theory of magnetized, coupled, rf-driven plasma sheaths in one dimension	1111
Spilios Riyopoulos	
Ultrahigh-intensity inverse bremsstrahlung	1122
I. Yu. Kostyukov and J.-M. Rax	

Physics of beams

Superradiant, single-supermode and nonlinear regimes of short pulse free electron laser oscillators	1136
P. Chaix, N. Piovela, and G. Grégoire	
Pulse propagation effects in a cyclotron resonance maser amplifier	1152
P. Aitken, B. W. J. McNeil, G. R. M. Robb, and A. D. R. Phelps	
Head-tail effect due to lattice nonlinearities in storage rings	1167
Kazuhito Ohmi and Yukinori Kobayashi	
Transient analysis of free-electron lasers with discrete radiators	1171
S. Krinsky	

Classical physics, including nonlinear media

Green's function of wave field in media with one-dimensional large-scale periodicity	1184
E. V. Aksenova, V. P. Romanov, and A. Yu. Val'kov	
Coherence properties of multimode incoherent spatial solitons in noninstantaneous Kerr media	1193
M. I. Carvalho, T. H. Coskun, D. N. Christodoulides, M. Mitchell, and M. Segev	
Decomposition of the point-dipole field into homogeneous and evanescent parts	1200
T. Setälä, M. Kaivola, and A. T. Friberg	

Computational physics

Scattering solutions of the spinless Salpeter equation	1207
F. Brau and C. Semay	
Class of Monte Carlo algorithms for dynamic problems leads to an adaptive method	1212
Erwan Adam, Luc Billard, and Frédéric Lançon	
Vector difference calculus for physical lattice models	1217
W. Schwalm, B. Moritz, M. Giona, and M. Schwalm	

BRIEF REPORTS**General methods of statistical physics**

Energy relaxation in discrete nonlinear lattices	1234
A. Bikaki, N. K. Voulgarakis, S. Aubry, and G. P. Tsironis	
Size distribution and the Hausdorff-Besicovitch dimension of two-scale Cantor dusts	1238
Avner Peleg and Baruch Meerson	
Critical nature of ideal Bose-Einstein condensation: Similarity with Yang-Lee theory of phase transition	1242
Xian-Zhi Wang and Jai Sam Kim	

Chaos and nonlinear dynamical systems

Chaos in coplanar classical collisions with particles interacting through r^{-2} forces	1246
Fabio Sattin and Luca Salasnich	

Classical fluids

Stability of convection in a vertical binary fluid layer with an adverse density gradient	1250
M. M. Bou-Ali, O. Ecnarro, J. A. Madariaga, C. M. Santamaría, and J. J. Valencia	
Derivation of the macroscopic continuum equations for multiphase flow	1253
Qisu Zou and Xiaoyi He	

Complex fluids, polymers, and granular materials

High energy tail in the velocity distribution of a granular gas	1256
J. Javier Brey, D. Cubero, and M. J. Ruiz-Montero	
Roughness-induced fluid interface fluctuations due to polar and apolar interactions	1259
G. Palasantzas and G. Backx	

Physics of beams

Ultrashort electron beam generation from resonantly excited nonlinear laser wakefield	1263
K. Nagashima, Y. Kishimoto, and H. Takuma	

Classical physics, including nonlinear media

Bragg solitons and the nonlinear Schrödinger equation	1267
C. Martijn de Sterke and Benjamin J. Eggleton	
Generation of light spatiotemporal solitons from asymmetric pulses in saturating nonlinear media	1270
V. Skarka, V. I. Berezhiani, and R. Miklaszewski	

Computational physics

Numerical solutions of nonlinear wave equations	1274
D. J. Kouri, D. S. Zhang, G. W. Wei, T. Konshak, and D. K. Hoffman	

COMMENTS

Comment on “Universal formulas for percolation thresholds. II. Extension to anisotropic and aperiodic lattices”	1278
F. Babalievski	
Comment on “Gas-liquid coexistence and demixing in systems with highly directional pair potentials”	1280
P. I. C. Teixeira	

ERRATA

Erratum: Crossover from Ising to mean-field critical behavior in an aqueous electrolyte solution [Phys. Rev. E 58 , 2188 (1998)]	1283
J. Jacob, A. Kumar, M. A. Anisimov, A. A. Povodyrev, and J. V. Sengers	

Cumulative Author Index	1284
