THIRD SERIES, VOLUME 59, NUMBER 2
PARTS A AND B

CONTENTS

FEBRUARY 1999

The Table of Contents is a total listing of Parts A and B.
Part A consists of pages R1287–1886, and Part B pages 1887–2492.

PART A

Note to Reader i

RAPID COMMUNICATIONS

General methods of statistical physics

Bounds for the time to failure of hierarchical systems of fracture R1287
J. B. Gómez, M. Vázquez-Prada, Y. Moreno, and A. F. Pacheco
Noninstantaneous collisions and two concepts of quasiparticles R1291
Pavel Lipavský, Václav Špička, and Klaus Morawetz
Numerical signs for a transition in the two-dimensional random field Ising model at $T=0$ R1295
Carlos Frontera and Eduard Vives
Time scale separation and heterogeneous off-equilibrium dynamics in spin models over random graphs R1299
A. Barrat and R. Zecchina
Dynamics of defect formation R1303
Esteban Moro and Grant Lythe
Synchronization and maximum Lyapunov exponents of cellular automata R1307
Franco Bagnoli and Raúl Rechtman
Self-organization of traffic jams in cities: Effects of stochastic dynamics and signal periods R1311
Debashish Chowdhury and Andreas Schadschneider

Chaos and nonlinear dynamical systems

Models of intermediate spectral statistics R1315
E. B. Bogomolny, U. Gerland, and C. Schmit

Classical fluids

Linear and nonlinear refraction and Bragg scattering of water waves R1319
Y. Agnon

Liquid crystals

Critical behavior of birefringence in the smectic-*A* phase of chiral smectic liquid crystals R1323
M. Škarabot, K. Kočevar, R. Blinc, G. Heppke, and I. Muševič

Complex fluids, polymers, and granular materials

Hexagons and interfaces in a vibrated granular layer R1327
I. S. Aranson, L. S. Tsimring, and V. M. Vinokur

Copyright 1999 by The American Physical Society

(Continued)

1063-651X(199902)59:2:A;1-K

PHYSICAL REVIEW E THIRD SERIES, VOLUME 59, NUMBER 2 FEBRUARY 1999

Spinodal decomposition in gels R1331
A. Onuki and S. Puri
Absence of many-body effects in interactions between charged colloidal particles R1335
Riina Tehver, Francesco Ancilotto, Flavio Toigo, Joel Koplik, and Jayanth R. Banavar
Depletion forces in hard-sphere colloids R1339
Riina Tehver, Amos Maritan, Joel Koplik, and Jayanth R. Banavar
Joule heating rate need not equal I^2R, where R is the Ohmic resistance: The case of voltaic cells R1343
Wayne M. Saslow
Ideal glass-glass transitions and logarithmic decay of correlations in a simple system R1347
L. Fabbian, W. Götze, F. Sciortino, P. Tartaglia, and F. Thiery

Computational physics

Dynamic simulations of the Kosterlitz-Thouless phase transition R1351
B. Zheng, M. Schulz, and S. Trimper

ARTICLES

General methods of statistical physics

Critical hysteresis for n-component magnets 1355
Ravá da Silveira and Mehran Kardar
Diffusion limited aggregation and iterated conformal maps 1368
Benny Davidovitch, H. G. E Hentschel, Zeev Olami, Itamar Procaccia, Leonard M. Sander, and Ellak Somfai
Detecting periodicity in experimental data using linear modeling techniques 1379
Michael Small and Kevin Judd
Numerical test of approximate single-step propagators: Harmonic power series expansions versus system-specific split operator representations 1386
Alexander N. Drozdov and Shigeo Hayashi
Quantum statistical mechanics for nonextensive systems 1398
E. K. Lenzi, R. S. Mendes, and A. K. Rajagopal
Self-driven propagation of crack arrays: A stationary two-dimensional model 1408
Thomas Boeck, Hans-Achim Bahr, Stefan Lampenscherf, and Ute Bahr
Inertia ratchets: A numerical study versus theory 1417
B. Lindner, L. Schimansky-Geier, P. Reimann, P. Hänggi, and M. Nagaoka
Dynamic and static properties of the invaded cluster algorithm 1425
K. Moriarty, J. Machta, and L. Y. Chayes
Decay of correlations in fluids: The one-component plasma from Debye-Hückel to the asymptotic-high-density limit 1435
R. J. F. Leote de Carvalho, R. Evans, and Y. Rosenfeld
Scale-free energy dissipation and dynamic phase transition in stochastic sandpiles 1452
Bosiljka Tadić
Simple measure for complexity 1459
J. S. Shiner, Matt Davison, and P. T. Landsberg
Anomalous diffusion in aperiodic environments 1465
Ferenc Iglói, Loïc Turban, and Heiko Rieger
Optimized perturbation approach with a Legendre transformation to a dissipative system: Correlation functions of a Morse oscillator 1475
Yoko Suzuki and Yoshitaka Tanimura
Compact support probability distributions in random matrix theory 1489
G. Akemann, G. M. Cicuta, L. Molinari, and G. Vernizzi

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 59, NUMBER 2** **FEBRUARY 1999**

Perturbations of noise: Origins of isothermal flows 1498
Piotr Garbaczewski
Generalized Bethe approximation 1512
Douglas Poland
Planar lattice model with gas, liquid, and solid phases 1523
Douglas Poland
Dielectric breakdown patterns and active walker model 1540
Chia-Rong Sheu, Ching-Yen Cheng, and Ru-Pin Pan
Statistics of certain models of evolution 1545
Russell K. Standish
Glauber critical dynamics: Exact solution of the kinetic Gaussian model 1551
Jian-Yang Zhu and Z. R. Yang
Kadanoff-Baym equations with initial correlations 1557
D. Semkat, D. Kremp, and M. Bonitz
Statistical features of large fluctuations in stochastic systems 1563
Marco Paniconi, and Michael F. Zimmer
Facet formation in the negative quenched Kardar-Parisi-Zhang equation 1570
H. Jeong, B. Kahng, and D. Kim
Velocity distribution for strings in phase-ordering kinetics 1574
Gene F. Mazenko
Universal finite-size scaling functions for critical systems with tilted boundary conditions 1585
Yutaka Okabe, Kazuhisa Kaneda, Macoto Kikuchi, and Chin-Kun Hu
Scaling in the time-dependent failure of a fiber bundle with local load sharing 1589
Shu-dong Zhang

Chaos and nonlinear dynamical systems

Noise-enhanced phase locking in a stochastic bistable system driven by a chaotic signal 1593
Alexander Silchenko, Tomasz Kapitaniak, and Vadim Anishchenko
Two different routes to chaos in a two-mode CO_2 laser with a saturable absorber 1600
Kazuhito Tanii, Takehisa Tohei, Toshiki Sugawara, Maki Tachikawa, and Tadao Shimizu
Tracer dynamics in a flow of driven vortices 1605
A. Witt, R. Braun, F. Feudel, Celso Grebogi, and J. Kurths
Approximating chaotic time series through unstable periodic orbits 1615
T. L. Carroll
Intermittency in spin-wave instabilities 1622
J. Becker, F. Rödelsperger, Th. Weyrauch, H. Benner, W. Just, and A. Čenys
Finite-size effects in a population of interacting oscillators 1633
Arkady Pikovsky and Stefano Ruffo
Periodic, quasiperiodic, and chaotic localized solutions of a driven, damped nonlinear lattice 1637
Dirk Hennig
Controlling transient chaos in deterministic flows with applications to electrical power systems and ecology 1646
Mukeshwar Dhamala and Ying-Cheng Lai
Wave chaos in terms of normal modes 1656
A. L. Virovlyansky and G. M. Zaslavsky
Parametric nonfeedback resonance in period doubling systems 1669
A. N. Pisarchik and R. Corbalán
Confined chaotic behavior in collective motion for populations of globally coupled chaotic elements 1675
Naoko Nakagawa and Teruhisa S. Komatsu
Antiphase chaos and intensity dependent dissipations 1683
David H. Henderson and Gian-Luca Oppo

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 59, NUMBER 2 FEBRUARY 1999

Quasiclassical surface of section perturbation theory 1694
R. E. Prange, R. Narevich, and Oleg Zaitsev
Subsystem decreasing for exponential synchronization of chaotic systems 1711
Takashi Matsumoto and Masanobu Nishi
Nonlinear behavior of a reaction-diffusion system of the photochemistry within the mesopause region 1719
G. Sonnemann and A. M. Feigin

Classical fluids

Mixed model for temperature structure functions in fully developed turbulence 1727
Ruizhong Rao
Nonlinear three-dimensional Rayleigh-Taylor instability 1729
S. I. Abarzhi
Assembly of microscopic highly magnetic droplets: Magnetic alignment versus viscous drag 1736
O. Sandre, J. Browaeys, R. Perzynski, J.-C. Bacri, V. Cabuil, and R. E. Rosensweig
Extended weakly nonlinear theory of planar nematic convection 1747
Emmanuel Plaut and Werner Pesch
Entropy increase in confined free expansions via molecular dynamics and smooth-particle applied mechanics 1770
Wm. G. Hoover and H. A. Posch
Single bubble sonoluminescence: Investigations of the emitted pressure wave with a fiber optic probe hydrophone 1777
Z. Q. Wang, R. Pecha, B. Gompf, and W. Eisenmenger
Experimental microwave radiometry of a sonoluminescing bubble 1781
John N. Kordomenos, Miguel Bernard, and Bruce Denardo
Magnetic resonance imaging of laser polarized liquid xenon 1785
C. H. Tseng, R. W. Mair, G. P. Wong, D. Williamson, D. G. Cory, and R. L. Walsworth
Driven inertial oscillations in spherical shells 1789
A. Tilgner
Evaluation of the isochoric heat capacity measurements at the critical isochore of SF_6 performed during the German Spacelab Mission D-2 1795
A. Haupt and J. Straub
Symmetry based approach to triplet correlation functions 1803
A. Khein and N. W. Ashcroft

Liquid crystals

Imprinting of nematic order at polymer network surfaces as a function of cross-link density 1808
Karl R. Amundson
Relaxation of abnormal rolls in planarly aligned electroconvection 1814
S. Rudroff, V. Frette, and I. Rehberg
Kossel diagram of an aligned cholesteric phase 1821
Richard J. Miller, Helen F. Gleeson, and John E. Lydon
Optical Kossel line study of an aligned monodomain sample of a cholesteric phase: Temperature evolution of the Kossel diagram 1828
R. J. Miller, H. F. Gleeson, and J. E. Lydon
Stability of texture and shape of circular domains of Langmuir monolayers 1834
David Pettey and T. C. Lubensky
Ionic adsorption and equilibrium distribution of charges in a nematic cell 1846
G. Barbero, A. K. Zvezdin, and L. R. Evangelista
Photobleaching and reorientational dynamics of dyes in a nematic liquid crystal 1850
M. Nöllmann, D. Shalóm, P. Etchegoin, and J. Sereni

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 59, NUMBER 2 FEBRUARY 1999

Fluorescence photobleaching recovery spectroscopy in a dye doped nematic liquid crystal 1860
P. Etchegoin
Delayed response of the alkyl chains during dynamical switching in a chiral, antiferroelectric liquid crystal probed by dynamic and polarized infrared spectroscopy 1868
A. L. Verma, B. Zhao, H. Terauchi, and Y. Ozaki
Surface-monolayer-induced bulk alignment of liquid crystals: From nematic to smectic-*A* phase 1873
Tiezheng Qian, Xiaowei Zhuang, and Y. R. Shen
X-ray scattering from smectic films on a substrate 1880
Dick K. G. de Boer

PART B

Note to Reader i

Complex fluids, polymers, and granular materials

Θ-point universality of random polyampholytes with screened interactions 1887
Pietro Monari and Attilio L. Stella
Dendritic and cellular doublets: Morphologies of thin solid films growing along a substrate during the initial state of solidification of bulk melts 1893
A. Ludwig
Dynamics of density fluctuations of a glass-forming epoxy resin revealed by Brillouin light scattering 1899
D. Fioretto, L. Comez, G. Socino, L. Verdini, S. Corezzi, and P. A. Rolla
Fractal nature of fat crystal networks 1908
Suresh S. Narine and Alejandro G. Marangoni
Frictional forces in an electrolytic environment 1921
L. I. Daikhin and M. Urbakh
Phase diagram of tobacco mosaic virus solutions 1932
Hartmut Graf and Hartmut Löwen
Particle interactions in colloidal aggregation by Brownian dynamics simulation 1943
A. M. Puertas, J. A. Maroto, A. Fernández Barbero, and F. J. de las Nieves
Dynamics near free surfaces of molecular dynamics simulated $Ni_{0.5}Zr_{0.5}$ metallic glass films 1948
B. Böddeker and H. Teichler
Analytical solution to a nonseparable interaction model for a one-dimensional fluid of anisotropic molecules near a hard wall 1957
Bruno Martínez-Haya, Juan M. Pastor, and José A. Cuesta
Relaxation of a supercooled low-density Coulomb fluid 1968
S. D. Wilke and J. Bosse
Structure of silica-filled poly(dimethyl siloxane) gels and solutions 1976
Anne-Marie Hecht, Erik Geissler, and Ferenc Horkay
Computer simulations on the cyclic deformation of a single polymer chain above and below the Θ temperature 1982
Stefan Kreitmeier, Markus Wittkop, and Dietmar Göritz
Anisotropic self-diffusion in colloidal nematic phases 1989
Hartmut Löwen
Diffusion-limited reactions of hard-core particles in one dimension 1996
P.-A. Bares and M. Mobilia
Phase diagram of charge-stabilized colloidal suspensions: van der Waals instability without attractive forces 2010
René van Roij, Marjolein Dijkstra, and Jean-Pierre Hansen
Comparison of critical properties in binary and ternary liquid mixtures using light scattering techniques 2026
O. Müller and J. Winkelmann

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 59, NUMBER 2** **FEBRUARY 1999**

4Miscibility of polyolefin blends from a Born-Green-Yvon lattice model in conjunction with small scale simulations 2039
J. Luettmer-Strathmann and J. E. G. Lipson
Shape dynamics of interfacial front in rotating cylinders 2044
Gerald H. Ristow and Masami Nakagawa
Experimental study of multilayer adsorption on fractal surfaces in porous media 2049
Jian Ma, Hao Qi, and Po-zen Wong
Static structure factor for a colloidal dispersion with size and ''charge'' polydispersities: Mean spherical approximation model in hard-sphere Yukawa fluids 2060
M. Ginoza and M. Yasutomi
Slow secondary relaxation in a free-energy landscape model for relaxation in glass-forming liquids 2067
Gregor Diezemann, Udayan Mohanty, and Irwin Oppenheim
Floppy modes and the free energy: Rigidity and connectivity percolation on Bethe lattices 2084
P. M. Duxbury, D. J. Jacobs, M. F. Thorpe, and C. Moukarzel
Inelastic granular gas: Computer simulations and kinetic theory of the cooling state 2093
J. M. Salazar and L. Brenig
Molecular twist transition in chiral and racemic phospholipid monolayers detected by Maxwell-displacement-current measurements 2105
Ou-Yang Zhong-can, XiaoBin Xu, Chen-Xu Wu, and Mitsumasa Iwamoto
Phase separation of a binary fluid containing surfactants in a Hele-Shaw cell 2109
Jiunn-Ren Roan and E. I. Shakhnovich
Long-time nonpreaveraged diffusivity and sedimentation velocity of clusters: Applications to micellar solutions 2126
Venkat Ganesan and Howard Brenner
Positional order in Langmuir monolayers: An x-ray diffraction study 2141
V. M. Kaganer, G. Brezesinski, H. Möhwald, P. B. Howes, and K. Kjaer
Hole formation and growth in freely standing polystyrene films 2153
K. Dalnoki-Veress, B. G. Nickel, C. Roth, and J. R. Dutcher
Buoyancy and electrically driven convection models in thin-layer electrodeposition 2157
Guillermo Marshall, Pablo Mocskos, Harry L. Swinney, and John M. Huth
Monte Carlo simulation of a lyotropic first-order isotropic-nematic phase transition in a lattice polymer model . . . 2168
H. Weber, W. Paul, and K. Binder
Brownian dynamics simulation of a hard-sphere suspension 2175
P. Strating
Viscous fingering of miscible fluids in an anisotropic radial Hele-Shaw cell: Coexistence of kinetic and surface-tension dendrite morphology types and an exploration of small-scale influences 2188
A. G. Banpurkar, Abhijit S. Ogale, A. V. Limaye, and S. B. Ogale
Influence of dissipation on stationary states 2192
Thierry Biben and Jarosław Piasecki

Biological physics

Interactions between stable spiral waves with different frequencies in cardiac tissue 2203
Fagen Xie, Zhilin Qu, James N. Weiss, and Alan Garfinkel
Nutrient competition as a determinant for cancer growth 2206
M. Scalerandi, A. Romano, G. P. Pescarmona, P. P. Delsanto, and C. A. Condat
Ab initio study on the molecular recognition by metalloporphyrins: CO interaction with iron porphyrin 2218
Seungwu Han, Kyeongjae Cho, and Jisoon Ihm
Multiple interactions between molecular and supramolecular ordering 2222
M. Manno, A. Emanuele, V. Martorana, D. Bulone, P. L. San Biagio, M. B. Palma-Vittorelli, and M. U. Palma

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 59, NUMBER 2 FEBRUARY 1999

Fractal analysis of protein potential energy landscapes 2231
D. A. Lidar, D. Thirumalai, R. Elber, and R. B. Gerber

Plasma physics

Anomalous and Gaussian transport regimes in anisotropic three-dimensional magnetic turbulence 2244
P. Pommois, P. Veltri, and G. Zimbardo
Raman scattering and excitation of the harmonics of intense laser radiation in cold plasmas 2253
A. V. Borovsky, V. V. Korobkin, O. B. Shiryaev, and A. L. Galkin
Numerical simulation of dust-acoustic waves 2263
D. Winske, M. S. Murillo, and M. Rosenberg
Ponderomotive force of quasiparticles in a plasma 2273
L. O. Silva, R. Bingham, J. M. Dawson, and W. B. Mori
Nonlinear radiation pressure and stochasticity in ultraintense laser fields 2281
Joel E. Moore
Thomson scattering measurements in atmospheric plasma jets 2286
G. Gregori, J. Schein, P. Schwendinger, U. Kortshagen, J. Heberlein, and E. Pfender
Singularities in the Rayleigh-Taylor instability of a thin plasma slab 2292
S. V. Bulanov, F. Pegoraro, and J.-I. Sakai
Etching a single micrometer-size particle in a plasma 2302
W. W. Stoffels, E. Stoffels, G. H. P. M. Swinkels, M. Boufnichel, and G. M. W. Kroesen
Cooling of optical-field-ionized plasmas 2305
A. Egbert, D. M. Simanovskii, B. N. Chichkov, and B. Wellegehausen

Physics of beams

Theory of the anomalous Doppler cyclotron-resonance-maser amplifier with tapered parameters 2311
G. S. Nusinovich, M. Korol, and E. Jerby
Two-dimensional cyclotron-resonance maser array: Spectral measurements with one and two electron beams 2322
Li Lei and Eli Jerby
Particle-core analysis of mismatched beams in a periodic focusing channel 2330
Masanori Ikegami
Control of harmonic generation in a free-electron laser with a quasiperiodic wiggler configuration 2339
M. G. Kong and A. Vourdas

Classical physics, including nonlinear media

Kink dynamics in finite discrete sine-Gordon chains 2347
Artur Kwaśniewski, Paweł Machnikowski, and Piotr Magnuszewski
Potential scattering with field discontinuities at the boundaries 2355
T. D. Visser and E. Wolf
Coefficient of restitution for elastic disks 2361
Franz Gerl and Annette Zippelius
Painlevé analysis of the coupled nonlinear Schrödinger equation for polarized optical waves in an isotropic medium 2373
Q-Han Park and H. J. Shin
Soliton interaction for a nonlinear discrete double chain 2380
A. Bülow, D. Hennig, and H. Gabriel
Multisoliton perturbation theory for the Manakov equations and its applications to nonlinear optics 2393
Jianke Yang

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 59, NUMBER 2 FEBRUARY 1999

Fluctuations in photon local delay time and their relation to phase spectra in random media 2406
P. Sebbah, O. Legrand, and A. Z. Genack

Computational physics

Addition theorem of Slater-type orbitals: Application to H_2^+ in a strong magnetic field 2412
Ahmed Bouferguene, Charles A. Weatherford, and Herbert W. Jones
Cluster-based Monte Carlo simulation of ferrofluids 2424
S. W. Davis, W. McCausland, H. C. McGahagan, C. T. Tanaka, and M. Widom
Calculating the thermal rate constant with exponential speedup on a quantum computer 2429
Daniel A. Lidar and Haobin Wang

BRIEF REPORTS

General methods of statistical physics

Effect of a parametric driving force on noise-induced transitions: Analytical results 2439
J. Plata

Chaos and nonlinear dynamical systems

Spiral waves in oscillatory media with an applied electric field 2443
Michael Gabbay, Edward Ott, and Parvez N. Guzdar

Classical fluids

Inelastic-collision-frequency theory of transport in low-density fluids 2447
G. S. Singh and B. Kumar
Multiplier phenomenology in random multiplicative cascade processes 2451
Bruno Jouault, Peter Lipa, and Martin Greiner

Liquid crystals

Structure of the ripple phase in chiral and racemic dimyristoylphosphatidylcholine multibilayers 2455
Kheya Sengupta, V. A. Raghunathan, and John Katsaras

Complex fluids, polymers, and granular materials

Solidity of viscous liquids 2458
Jeppe C. Dyre
Dynamics of glassy clusters appearing by nonlinear dielectric effect studies 2460
Sylwester J. Rzoska and Jerzy Zioło

Physics of beams

Radiation beam steering by cyclotron-resonance maser array 2464
Amit Kesar and Eli Jerby

Classical physics, including nonlinear media

Self-sustained trapping mechanism of zero-velocity parametric gap solitons 2467
Claudio Conti, Gaetano Assanto, and Stefano Trillo

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 59, NUMBER 2 FEBRUARY 1999

Computational physics

Laguerre scheme: Another member for propagating the time-dependent Schrödinger equation 2471
Xu-Guang Hu
Combining atomistic and continuum simulations of contact-line motion 2475
Nicolas G. Hadjicostantinou

COMMENTS

Comment on ''Nonstationary optimal paths and tails of prehistory probability density in multistable stochastic systems'' 2479
R. Mannella
Reply to ''Comment on 'Nonstationary optimal paths and tails of prehistory probability density in multistable stochastic systems' '' 2481
B. E. Vugmeister, J. Botina, and H. Rabitz
