THIRD SERIES, VOLUME 61, NUMBER 1

CONTENTS

JANUARY 2000

Guidelines for PRE Section Selection	iii
Physical Review E Editorial Policies and Practices	iv
Physical Review E Information for Contributors	viii
Guidelines for Estimating Length	xi

RAPID COMMUNICATIONS

General methods of statistical physics

Universal behavior of nonequilibrium fluctuations in free diffusion processes	R1
Doriano Brogioli, Alberto Vailati, and Marzio Giglio	
Multiscaling in inelastic collisions	R5
E. Ben-Naim and P. L. Krapivsky	
Dynamics of a penta-hepta defect in a hexagonal pattern	R9
Tammy Tam, Darrick Ohata, and Mingming Wu	
Large- q asymptotics of the random-bond Potts model	R13
Jesper Lykke Jacobsen and Marco Picco	

Chaos and nonlinear dynamical systems

Wave scattering through classically chaotic cavities in the presence of absorption: An information-theoretic model	R17
Eugene Kogan, Pier A. Mello, and He Liquan	

Classical fluids

Growth of Taylor vortices: A molecular dynamics study	R21
D. Hirshfeld and D. C. Rapaport	
Abnormal rolls and regular arrays of disclinations in homeotropic electroconvection	R25
Axel G. Rossberg, Nándor Éber, Ágnes Buka, and Lorenz Kramer	
Inverse energy cascade in two-dimensional turbulence: Deviations from Gaussian behavior	R29
G. Boffetta, A. Celani, and M. Vergassola	
Intermittency of temperature field in turbulent convection	R33
Emily S. C. Ching	

Liquid crystals

- Bilayer-by-bilayer antiferroelectric ordering in freely suspended films of an achiral polymer-monomer liquid crystal mixture R37
 D. R. Link, N. A. Clark, B. I. Ostrovskii, and E. A. Soto Bustamante

Complex fluids, polymers, and granular materials

- Apparent finite-size effects in the dynamics of supercooled liquids R41
 Kang Kim and Ryoichi Yamamoto
 Pumping liquids using asymmetric electrode arrays R45
 Armand Ajdari
 Velocity and shape selection of dendritic crystals in a forced flow R49
 X. Tong, C. Beckermann, and A. Karma
 Reductions of the glass transition temperature in thin polymer films: Probing the length scale of cooperative dynamics R53
 James A. Forrest and Johan Mattsson

Biological physics

- Phase separation and shape deformation of two-phase membranes R57
 Y. Jiang, T. Lookman, and A. Saxena

ARTICLES**General methods of statistical physics**

- Path integrals for the quantum microcanonical ensemble 61
 John W. Lawson
 Collective modes in an open microwave billiard 66
 P. Šeba, I. Rotter, M. Müller, E. Persson, and K. Pichugin
 Optical properties of nonequilibrium low-dimensional systems 71
 Sergio A. Hassan, Aurea R. Vasconcellos, Marcus V. Mesquita, and Roberto Luzzi
 Roughening and preroughening transitions in crystal surfaces with double-height steps 77
 Jae Dong Noh
 Scaling of waves in the Bak-Tang-Wiesenfeld sandpile model 81
 D. V. Kvitarev, S. Lübeck, P. Grassberger, and V. B. Priezzhev
 Lévy scaling in random walks with fluctuating variance 93
 P. Santini
 Generation of compound non-Gaussian random processes with a given correlation function 100
 S. Primak
 Nonlinear measures for characterizing rough surface morphologies 104
 Jané Kondev, Christopher L. Henley, and David G. Salinas
 Crossover between a displacive and an order-disorder phase transition 126
 A. N. Rubtsov, J. Hlinka, and T. Janssen
 From continuous time random walks to the fractional Fokker-Planck equation 132
 E. Barkai, R. Metzler, and J. Klafter
 Ratchet driven by quasimonochromatic noise 139
 M. Arrayás, R. Mannella, P. V. E. McClintock, A. J. McKane, and N. D. Stein
 Correlation-length-exponent relation for the two-dimensional random Ising model 147
 Péter Lajkó and Ferenc Igloi
 Deterministic equations of motion and phase ordering dynamics 153
 B. Zheng

Stochastic resonance in vertical cavity surface emitting lasers	157
Sylvain Barbay, Giovanni Giacomelli, and Francesco Marin	
Surface critical behavior in systems with nonequilibrium phase transitions	167
Martin Howard, Per Fröjdh, and Kent Bækgaard Lauritsen	
Field-induced vacancy localization in a driven lattice gas: Scaling of steady states	184
M. Thies and B. Schmittmann	
Spectrum of the Fokker-Planck operator representing diffusion in a random velocity field	196
J. T. Chalker and Z. Jane Wang	
Moment analysis of the probability distribution of different sandpile models	204
S. Lübeck	
Solvable kinetic Gaussian model in an external field	210
Jian-Yang Zhu and Z. R. Yang	
Mixed-spin Ising model with one- and two-spin competing dynamics	218
M. Godoy and W. Figueiredo	
Nonequilibrium phase transitions induced by multiplicative noise: Effects of self-correlation	223
Sergio E. Mangioni, Roberto R. Deza, Raúl Toral, and Horacio S. Wio	
Stochastic resonance as dithering	233
Robert A. Wannamaker, Stanley P. Lipshitz, and John Vanderkooy	
Event-by-event fluid dynamics	237
L. P. Csernai, Zs. I. Lázár, I. A. Lázár, D. Molnár, J. Pipek, and D. D. Strottman	
Effect of shear on phase-ordering dynamics with order-parameter-dependent mobility: The large- n limit	247
N. P. Rapapa	
Universality classes for the ricepile model with absorbing properties	253
Mária Markošová	
Distribution of escape times for a deterministically driven bistable system	261
José Manuel Casado and José Gómez-Ordóñez	
Thermodynamic picture of the glassy state gained from exactly solvable models	267
Th. M. Nieuwenhuizen	
Boundary spatiotemporal correlations in a self-organized critical model of punctuated equilibrium	293
Emma Montevicchi and Attilio L. Stella	
Dynamical weight functions for a planar crack	298
A. A. Al-Falou, R. C. Ball, and H. Larralde	
Drift ratchet	312
Christiane Kettner, Peter Reimann, Peter Hänggi, and Frank Müller	
Diffusion in disordered lattices and related Heisenberg ferromagnets	324
M. D. Grynberg and R. B. Stinchcombe	
Chaos and nonlinear dynamical systems	
Scaling of Lyapunov exponents of coupled chaotic systems	332
Rüdiger Zillmer, Volker Ahlers, and Arkady Pikovsky	
Homoclinic tangency and chaotic attractor disappearance in a dripping faucet experiment	342
Reynaldo D. Pinto and José C. Sartorelli	
Dynamical control of systems near bifurcation points using time series	348
Zhao Hong, Liu Yaowen, Ping Huican, and Wang Yinghai	
Dynamical system approach to phyllotaxis	354
F. d'Ovidio and E. Mosekilde	
Autocorrelation function of level velocities for ray-splitting billiards	366
Y. Hlushchuk, A. Kohler, Sz. Bauch, L. Sirko, R. Blümel, M. Barth, and H.-J. Stöckmann	
Synchronization in a system of globally coupled oscillators with time delay	371
M. Y. Choi, H. J. Kim, D. Kim, and H. Hong	

Quantum chaotic scattering with a mixed phase space: The three-disk billiard in a magnetic field	382
Markus Eichengrün, Walter Schirmacher, and Wolfgang Bregmann	
Classical fluids	
Stability analysis of plane wave solutions of the discrete Ginzburg-Landau equation	390
J. F. Ravoux, S. Le Dizès, and P. Le Gal	
Molecular dynamics simulations of supercooled and amorphous $\text{Co}_{100-x}\text{Zr}_x$: Atomic mobilities and structural properties	394
U. K. Rößler and H. Teichler	
Mie scattering and the physical mechanisms of sonoluminescence	403
C. Villarreal, R. Esquivel-Sirvent, and R. Jáuregui	
Scaling structure of the velocity statistics in atmospheric boundary layers	407
Susan Kurien, Victor S. L'vov, Itamar Procaccia, and K. R. Sreenivasan	
Density correlations in lattice gases in contact with a confining wall	422
J. Reinhard, W. Dieterich, P. Maass, and H. L. Frisch	
Self-consistent derivation of subgrid stresses for large-scale fluid equations	429
Fernando O. Minotti	
Spinodal decomposition of off-critical quenches with a viscous phase using dissipative particle dynamics in two and three spatial dimensions	435
Keir E. Novik and Peter V. Coveney	
Dynamic properties of hydrogen-bonded networks in supercritical water	449
J. Martí	
Nonlocal transport of passive scalars in turbulent penetrative convection	457
Mark S. Miesch, Axel Brandenburg, and Ellen G. Zweibel	
Numerical studies of flames in wide tubes: Stability limits of curved stationary flames	468
O. Yu. Travnikov, V. V. Bychkov, and M. A. Liberman	
Pattern formation in drying drops	475
Robert D. Deegan	
Liquid crystals	
Phase diagrams of lyotropic cholesteric fluids	486
Pierre Tolédano, A. M. Figueiredo Neto, and Z. A. de Sant'Ana	
Layer dynamics of freely standing smectic-A films	493
Hsuan-Yi Chen and David Jasnow	
Molecular simulation and theory of a liquid crystalline disclination core	504
Denis Andrienko and Michael P. Allen	
Surface-induced ordering in thin uniaxial liquid crystal films	511
Hyunbum Jang and Malcolm J. Grimson	
Multicritical behaviors and an induced twist grain boundary phase in a binary liquid crystalline mixture	519
M. Ismaili, A. Anakkar, G. Joly, N. Isaert, and H. T. Nguyen	
Complex fluids, polymers, and granular materials	
Scaling behavior of the α relaxation in fragile glass-forming liquids under conditions of high compression	526
Marian Paluch, Stella Hensel-Bielówka, and Jerzy Ziolo	
Ellipsometric determination of universal critical adsorption scaling functions	532
J. H. Carpenter, J.-H. J. Cho, and B. M. Law	
Dynamic scaling of the critical ultrasonic attenuation in binary liquids: Evidence from broadband spectrometry . . .	542
S. Z. Mirzaev, T. Telgmann, and U. Kaatz	

Cluster-cluster aggregation in binary mixtures	550
A. AlSunaidi, M. Lach-hab, Agustín E. González, and Estela Blaisten-Barojas	
Neutron scattering from aerosols: Intraparticle structure factor, Guinier analysis of particle speed, and crossed beam kinematics	557
Gerald Wilemski	
Early stages of homopolymer collapse	565
A. Halperin and Paul M. Goldbart	
Ionic condensation theories and the liquidlike structures observed in colloidal dispersions	574
M. Quesada-Pérez, J. Callejas-Fernández, and R. Hidalgo-Álvarez	
Tracer dispersion in a percolation network with spatial correlations	583
Hernán A. Makse, José S. Andrade, Jr., and H. Eugene Stanley	
Evolution of vibrational excitations in glassy systems	587
W. Götze and M. R. Mayr	
<i>In situ</i> and interrupted-growth studies of the self-assembly of octadecyltrichlorosilane monolayers	607
A. G. Richter, C.-J. Yu, A. Datta, J. Kmetko, and P. Dutta	
Hydraulic permeability of (un)bounded fibrous media using the lattice Boltzmann method	616
D. S. Clague, B. D. Kandhai, R. Zhang, and P. M. A. Slood	
Self-diffusion and sedimentation of tracer spheres in (semi)dilute dispersions of rigid colloidal rods	626
Sebastiaan G. J. M. Kluijtmans, Gijsberta H. Koenderink, and Albert P. Philipse	
Effect of long-range forces on surface freezing	637
Prabir K. Mukherjee and Moshe Deutsch	
Thermal and chemical diffusion in the rapid solidification of binary alloys	642
Massimo Conti	
Absence of the liquid phase when the attraction is not pairwise additive	651
Richard P. Sear	
Simple views on critical binary liquid mixtures in porous glass	656
L. Tremblay, S. M. Socol, and S. Lacelle	
Nature of the transition from two- to three-dimensional ordering in a confined colloidal suspension	660
Ronen Zangi and Stuart A. Rice	
Hexagonal to square lattice conversion in bilayer systems	671
Ronen Zangi and Stuart A. Rice	
Adiabatic compressibility of AOT [sodium bis(2-ethylhexyl)sulfosuccinate] reverse micelles: Analysis of a simple model based on micellar size and volumetric measurements	682
A. Amararene, M. Gindre, J.-Y. Le Huérou, W. Urbach, D. Valdez, and M. Waks	
Effect of the wall roughness on slip and rheological properties of hexadecane in molecular dynamics simulation of Couette shear flow between two sinusoidal walls	690
A. Jabbarzadeh, J. D. Atkinson, and R. I. Tanner	
Instabilities of concentration stripe patterns in ferrocolloids	700
A. Čebers	
Diffusional mechanism of strong selection in Ostwald ripening	709
I. Rubinstein and B. Zaltzman	
Biological physics	
Responses of a Hodgkin-Huxley neuron to various types of spike-train inputs	718
Hideo Hasegawa	
From local to global spatiotemporal chaos in a cardiac tissue model	727
Zhilin Qu, James N. Weiss, and Alan Garfinkel	

Short-term forecasting of life-threatening cardiac arrhythmias based on symbolic dynamics and finite-time growth rates	733
Niels Wessel, Christine Ziehmann, Jürgen Kurths, Udo Meyerfeldt, Alexander Schirdewan, and Andreas Voss	
Coherence resonance and noise-induced synchronization in globally coupled Hodgkin-Huxley neurons	740
Yuqing Wang, David T. W. Chik, and Z. D. Wang	
Elastic stability of DNA configurations. I. General theory	747
Irwin Tobias, David Swigon, and Bernard D. Coleman	
Elastic stability of DNA configurations. II. Supercoiled plasmids with self-contact	759
Bernard D. Coleman, David Swigon, and Irwin Tobias	
Different hierarchy of avalanches observed in the Bak-Sneppen evolution model	771
W. Li and X. Cai	
Chaotic behavior in noninteger-order cellular neural networks	776
P. Arena, L. Fortuna, and D. Porto	
Plasma physics	
Surface waves in strongly irradiated dusty plasmas	782
K. N. Ostrikov, M. Y. Yu, and L. Stenflo	
Transverse modulation of an electron beam generated in self-modulated laser wakefield accelerator experiments ..	788
C. I. Moore, K. Krushelnick, A. Ting, H. R. Burris, R. F. Hubbard, and P. Sprangle	
Dipolar interaction in a colloidal plasma	793
D. P. Resendes	
Analysis of the <i>M</i> -shell spectra emitted by a short-pulse laser-created tantalum plasma	801
M. Busquet, Z. Jiang, C. Y. Côté, J. C. Kieffer, M. Klapisch, A. Bar-Shalom, C. Bauche-Arnoult, and A. Bachelier	
Nonlinear dust kinetic Alfvén waves	809
Chen Yinhua, Lu Wei, and M. Y. Yu	
Proper orthogonal decomposition and Galerkin projection for a three-dimensional plasma dynamical system	813
P. Beyer, S. Benkadda, and X. Garbet	
Force between charged particles with ion condensation	824
Peilong Chen and C.-Y. D. Lu	
Hamiltonian dynamics of vortex and magnetic lines in hydrodynamic type systems	831
E. A. Kuznetsov and V. P. Ruban	
Two-dimensional model of thermal smoothing of laser imprint in a double-pulse plasma	842
A. B. Isakov, V. F. Tishkin, I. G. Lebo, J. Limpouch, K. Mašek, and K. Rohlena	
Diffusion cooling in a magnetic field	848
R. E. Robson	
Physics of beams	
Particle-core study of halo dynamics in periodic-focusing channels	855
Tai-Sen F. Wang	
Classical physics, including nonlinear media	
Spatiotemporal structure of isodiffracting ultrashort electromagnetic pulses	862
Simin Feng and Herbert G. Winful	
Soliton interaction with an external traveling wave	874
Gil Cohen	
Optical solitons in resonant and nonresonant nonlinear media in the presence of perturbations	880
Mihai Piscureanu and Doina Manaila-Maximean	

Embedded solitons in a three-wave system	886
Alan R. Champneys and Boris A. Malomed	
Regime of wave-packet self-action in a medium with normal dispersion of the group velocity	891
A. G. Litvak, V. A. Mironov, and E. M. Sher	

Computational physics

Laser ray tracing and power deposition on an unstructured three-dimensional grid	895
Thomas B. Kaiser	
Lattice-switch Monte Carlo method	906
A. D. Bruce, A. N. Jackson, G. J. Ackland, and N. B. Wilding	
Complex absorbing potential and Chebyshev propagation scheme	920
S. Midgley and J. B. Wang	

BRIEF REPORTS

General methods of statistical physics

Third-frequency-moment sum rule for electronic multilayers	926
Dexin Lu and Kenneth I. Golden	
Repulsion of resonance states and exceptional points	929
W. D. Heiss	
Ising cubes with enhanced surface couplings	933
M. Pleimling and W. Selke	
Molecular ratchets: Verification of the principle of detailed balance and the second law of dynamics	937
K. L. Sebastian	
Stochastic resonance at phase noise in signal transmission	940
François Chapeau-Blondeau	
Universality classes in the random-storage sandpile model	944
Alexei Vázquez and Oscar Sotolongo-Costa	

Chaos and nonlinear dynamical systems

Relaxation and Lyapunov time scales in a one-dimensional gravitating sheet system	948
Toshio Tsuchiya and Naoteru Gouda	
Perturbative and nonperturbative parts of eigenstates and local spectral density of states: The Wigner-band random-matrix model	952
Wen-ge Wang	

Classical fluids

Upper bound on the heat transport in a layer of fluid of infinite Prandtl number, rigid lower boundary, and stress-free upper boundary	956
Nikolay K. Vitanov	

Complex fluids, polymers, and granular materials

Dynamics of critical fluctuations in a binary mixture of limited miscibility under a strong electric field	960
Sylwester J. Rzoska, Aleksandra Drozd-Rzoska, and Jerzy Ziolo	
Characterization of soliton damping in the granular chain under gravity	964
Jongbae Hong, Heekyung Kim, and Jeong-Pil Hwang	

Biological physics

- Hysteresis studies in a noisy autoassociative neural network 968
 Renuka Rai and Harjinder Singh

Physics of beams

- Stochastic electron gas theory of coherence in laser-driven synchrotron radiation 972
 F. V. Hartemann

Classical physics, including nonlinear media

- Nonlinear short-wave propagation in ferrites 976
 R. A. Kraenkel, M. A. Manna, and V. Merle

COMMENTS

- Comment on “Monte Carlo study of structural ordering in charged colloids using a long-range attractive interaction” 980
 David G. Grier and John C. Crocker
 Reply to “Comment on ‘Monte Carlo study of structural ordering in charged colloids using a long-range attractive interaction’ ” 983
 B. V. R. Tata and Norio Ise
