

## CONTENTS - *Continued*

PHYSICAL REVIEW E

THIRD SERIES, VOLUME 61, NUMBER 2

FEBRUARY 2000

|                                                                                                                                  |       |
|----------------------------------------------------------------------------------------------------------------------------------|-------|
| Evidence for dipole surface orientational order at critical interfaces . . . . .<br>A. Mukhopadhyay, C. L. Caylor, and B. M. Law | R1036 |
|----------------------------------------------------------------------------------------------------------------------------------|-------|

### Biological physics

|                                                                            |       |
|----------------------------------------------------------------------------|-------|
| Glassy dynamics of protein folding . . . . .<br>Erkan Tüzel and Ayşe Erzan | R1040 |
|----------------------------------------------------------------------------|-------|

### Classical physics, including nonlinear media

|                                                                                                                                                      |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Solitons in anharmonic chains with ultra-long-range interatomic interactions . . . . .<br>Serge F. Mingaleev, Yuri B. Gaididei, and Franz G. Mertens | R1044 |
| Self-similarity and fractals in soliton-supporting systems . . . . .<br>Marin Soljacic, Mordechai Segev, and Curtis R. Menyuk                        | R1048 |

## ARTICLES

### General methods of statistical physics

|                                                                                                                                                                  |      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Continuous probability distributions from finite data . . . . .<br>David M. Schmidt                                                                              | 1052 |
| Continuum approach to car-following models . . . . .<br>Peter Berg, Anthony Mason, and Andrew Woods                                                              | 1056 |
| Self-organized criticality in a computer network model . . . . .<br>Jian Yuan, Yong Ren, and Xiuming Shan                                                        | 1067 |
| Elastic constants from microscopic strain fluctuations . . . . .<br>Surajit Sengupta, Peter Nielaba, Madan Rao, and K. Binder                                    | 1072 |
| Invariant power law distribution of Langevin systems with colored multiplicative noise . . . . .<br>Aki-Hiro Sato, Hideki Takayasu, and Yasuji Sawada            | 1081 |
| Perturbation expansion in phase-ordering kinetics. II. $n$ -vector model . . . . .<br>Gene F. Mazenko                                                            | 1088 |
| Delocalization transition of a rough adsorption-reaction interface . . . . .<br>Hüseyin Kaya, Alkan Kabakçioğlu, and Ayşe Erzan                                  | 1102 |
| Localized structures in nonlinear lattices with diffusive coupling and external driving . . . . .<br>Igor Mitkov, Konstantin Kladko, and A. R. Bishop            | 1106 |
| Diffusion-mediated reactions with a time-dependent absorption rate . . . . .<br>Miguel A. Ré and Carlos E. Budde                                                 | 1110 |
| Ultrametricity in three-dimensional Edwards-Anderson spin glasses . . . . .<br>Silvio Franz and Federico Ricci-Tersenghi                                         | 1121 |
| Diffusion over a saddle with a Langevin equation . . . . .<br>Yasuhisa Abe, David Boilley, Bertrand G. Giraud, and Takahiro Wada                                 | 1125 |
| Competitive reactions among three monomers over a catalytic surface . . . . .<br>E. C. da Costa and W. Figueiredo                                                | 1134 |
| Inequivalence of dynamical ensembles in a generalized driven diffusive lattice gas . . . . .<br>Muktish Acharyya, Abhik Basu, Rahul Pandit, and Sriram Ramaswamy | 1139 |
| Equilibrium and stationary nonequilibrium states in a chain of colliding harmonic oscillators . . . . .<br>Mitsusada M. Sano                                     | 1144 |
| Background estimation in experimental spectra . . . . .<br>R. Fischer, K. M. Hanson, V. Dose, and W. von der Linden                                              | 1152 |
| Renormalized field theory of driven lattice gases under infinitely fast drive . . . . .<br>F. de los Santos and Miguel A. Muñoz                                  | 1161 |
