PHYSICAL REVIEW E

THIRD SERIES, VOLUME 62, NUMBER 1

JULY 2000

Statistical properties of passive tracers in a positive four-point vortex model	1424
Sílvia Gama and Paula Milheiro-Oliveira	
Voids in the H-bonded network of water and their manifestation in the structure factor	1427
David R. Barker, Mark Wilson, Paul A. Madden, Nikolai N. Medvedev, and Alfons Geiger	
Liquid crystals	
Nematic liquid crystal viscosity: Inadequacies of microscopic theories	1431
Agnieszka Chrzanowska	
Blue phases of cholesteric liquid crystals as thermotropic photonic crystals	1435
P. Etchegoin	
Complex fluids, polymers, and granular materials	
Correlation functions for glass-forming systems	1438
R. L. Jacobs	
Validity of a macroscopic description in dilute polymeric solutions	1441
P. Ilg and I. V. Karlin	
Biological physics	
Nutrient chemotaxis suppression of a diffusive instability in bacterial colony dynamics	1444
Scott Arouh and Herbert Levine	
Online learning with ensembles	1448
R. Urbanczik	
Plasma physics	
Boundary conditions in fluid models of gas discharges	1452
G. J. M. Hagelaar, F. J. de Hoog, and G. M. W. Kroesen	
ERRATA	
Erratum: Hopf bifurcations in balance equations of glow discharges [Phys. Rev. E 56 , 2118 (1997)]	1455
B.-P. Koch, N. Goepp, and B. Bruhn	
Erratum: Responses of a Hodgkin-Huxley neuron to various types of spike-train inputs [Phys. Rev. E 61 , 718 (2000)]	1456
Hideo Hasegawa	
Erratum: Three-dimensional spinning solitons in dispersive media with the cubic-quintic nonlinearity [Phys. Rev. E 61 , 3107 (2000)]	1457
Anton Desyatnikov, Andrey Maimistov, and Boris Malomed	
Cumulative Author Index	1458

CONTENTS - *Continued*

PHYSICAL REVIEW E

THIRD SERIES, VOLUME 62, NUMBER 1

JULY 2000

Theory of wakefields in a dielectric-lined waveguide	1266
S. Y. Park and J. L. Hirshfield	

Classical physics, including nonlinear media

Solitary current-density patterns in thin ZnS:Mn films	1284
S. Zuccaro, F.-J. Niedernostheide, B. Kukuk, M. Strych, and H.-G. Purwins	
Theory of surface nuclear magnetic resonance with applications to geophysical imaging problems	1290
Peter B. Weichman, Eugene M. Lively, and Michael H. Ritzwoller	
Exact soliton solutions for a family of N coupled nonlinear Schrödinger equations in optical fiber media	1313
K. Nakkeeran	
Stable solitons of quadratic Ginzburg-Landau equations	1322
Lucian-Cornel Crasovan, Boris A. Malomed, Dumitru Mihalache, Dumitru Mazilu, and Falk Lederer	
Two-dimensional optical spatiotemporal solitons in quadratic media	1328
Xiang Liu, Kale Beckwitt, and Frank Wise	
Acoustic energy and momentum in a moving medium	1341
Michael Stone	
Viscoplasticity and the dynamics of brittle fracture	1351
J. S. Langer	
Onset of fluidization in vertically shaken granular material	1361
Thorsten Pöschel, Thomas Schwager, and Clara Saluëña	

Computational physics

Long-lived localized field configurations in small lattices: Application to oscillons	1368
M. Gleiser and A. Sornborger	
Dissipative high phase-lag order Numerov-type methods for the numerical solution of the Schrödinger equation ..	1375
G. Avdelas and T. E. Simos	
Numerical solution of the Gross-Pitaevskii equation using an explicit finite-difference scheme: An application to trapped Bose-Einstein condensates	1382
M. M. Cerimele, M. L. Chiofalo, F. Pistella, S. Succi, and M. P. Tosi	
Energy correction for isolated impurities under periodic boundary conditions	1390
Hanae Nozaki and Satoshi Itoh	
Improved Rosenbluth Monte Carlo scheme for cluster counting and lattice animal enumeration	1397
C. M. Care and R. Ettelaie	
Numerical model for collisions in the drift approximation that reproduces classical and neoclassical transport	1405
Qudsia Quraishi and Scott Robertson	

BRIEF REPORTS

Chaos and nonlinear dynamical systems

Stochastic resonance in two-dimensional arrays of coupled nonlinear oscillators	1413
N. Sungar, J. P. Sharpe, and S. Weber	

Classical fluids

Mechanism for the Faraday instability in viscous liquids	1416
Satish Kumar	
Measurement of negative Soret coefficients in a vertical fluid layer with an adverse density gradient	1420
M. M. Bou-Ali, O. Ecenarro, J. A. Madariaga, C. M. Santamaría, and J. J. Valencia

PHYSICAL REVIEW E

THIRD SERIES, VOLUME 62, NUMBER 1

JULY 2000

Role of noise in image processing by the human perceptive system	1104
M. Piana, M. Canfora, and M. Riani	
Spectromicroscopy of boron in human glioblastomas following administration of $\text{Na}_2\text{B}_{12}\text{H}_{11}\text{SH}$	1110
B. Gilbert, L. Perfetti, O. Fauchoux, J. Redondo, P.-A. Baudat, R. Andres, M. Neumann, S. Steen, D. Gabel, Delio Mercanti, M. Teresa Ciotti, P. Perfetti, G. Margaritondo, and Gelsomina De Stasio ^{5,6}	
Extinctions and taxonomy in a trophic model of coevolution	1119
Juan Camacho and Ricard V. Solé	
Pressure patches for membranes: The induced pinch of a grafted polymer	1124
T. Bickel, C. Marques, and C. Jeppesen	
Pulling a polymer out of a potential well and the mechanical unzipping of DNA	1128
K. L. Sebastian	
Spontaneous base flipping in DNA and its possible role in methyltransferase binding	1133
Y. Z. Chen, V. Mohan, and R. H. Griffey	
Multiscaling and information content of natural color images	1138
Antonio Turiel, Néstor Parga, Daniel L. Ruderman, and Thomas W. Cronin	
Emergent global oscillations in heterogeneous excitable media: The example of pancreatic β cells	1149
Julyan H. E. Cartwright	
Plasma physics	
Electromagnetic instabilities in unmagnetized plasmas	1155
H. Saleem, K. Watanabe, and T. Sato	
Bifurcations and transport barriers in the resistive- g paradigm	1162
M. Berning and K. H. Spatschek	
Linear theory of plasma wakes	1175
Giovanni Lapenta	
Modeling of electron-cyclotron-resonance-heated plasmas	1182
A. Girard, C. Pernot, G. Melin, and C. Lécot	
Mie and Debye scattering in dusty plasmas	1190
R. Guerra and J. T. Mendonça	
Hydrodynamic simulation of subpicosecond laser interaction with solid-density matter	1202
K. Eidmann, J. Meyer-ter-Vehn, T. Schlegel, and S. Hüller	
Nonlinear oscillations of trapped plasmas	1215
Sh. G. Amiranashvili	
Equation-of-state properties of high-energy-density matter using intense heavy ion beams with an annular focal spot	1224
N. A. Tahir, D. H. H. Hoffmann, A. Kozyreva, A. Shutov, J. A. Maruhn, U. Neuner, A. Tauschwitz, P. Spiller, and R. Bock	
Threshold of induced transparency in the relativistic interaction of an electromagnetic wave with overdense plasmas	1234
F. Cattani, A. Kim, D. Anderson, and M. Lisak	
Melting of dust plasma crystals with defects	1238
I. V. Schweigert, V. A. Schweigert, A. Melzer, and A. Piel	
Evidence for topological nonequilibrium in magnetic configurations	1245
S. I. Vainshtein, Z. Mikić, R. Rosner, and J. A. Linker	
Physics of beams	
Hybrid Čerenkov mode in a resonant medium	1252
Levi Schächter	
Collective beam-beam effects in hadron colliders	1258
J. Shi and D. Yao

PHYSICAL REVIEW E

THIRD SERIES, VOLUME 62, NUMBER 1

JULY 2000

Conformational statistics of stiff macromolecules as solutions to partial differential equations on the rotation and motion groups	880
Gregory S. Chirikjian and Yunfeng Wang	
Stochastic reconstruction of sandstones	893
C. Manwart, S. Torquato, and R. Hilfer	
Superlattice formation in mixtures of hard-sphere colloids	900
Neil Hunt, Roger Jardine, and Paul Bartlett	
Roughening, deroughening, and nonuniversal scaling of the interface width in electrophoretic deposition of polymer chains	914
Frank W. Bentrem, R. B. Pandey, and Fereydoon Family	
Indirect interaction of colloidal particles adsorbed on smectic films	918
Peter Schiller	
Kramers problem for a polymer in a double well	927
K. L. Sebastian and Alok K. R. Paul	
Wetting in a phase separating polymer blend film: Quench depth dependence	940
Mark Geoghegan, Hubert Ermer, Gerald Jüngst, Georg Krausch, and Rüdiger Brenn ^{1,4}	
Fabricating colloidal particles with photolithography and their interactions at an air-water interface	951
A. B. D. Brown, C. G. Smith, and A. R. Rennie	
Reverse and intermediate segregation of large beads in dry granular media	961
N. Thomas	
Out-of-equilibrium nucleation in the solidification of helium	975
T. A. Johnson and C. Elbaum	
Mechanical properties of granular media, including snow, investigated by a low-frequency forced torsion pendulum	982
G. D'Anna	
Towards a quantification of disorder in materials: Distinguishing equilibrium and glassy sphere packings	993
T. M. Truskett, S. Torquato, and P. G. Debenedetti	
Intermittency in dynamics of two-dimensional vortexlike defects	1002
V. V. Lebedev	
Structure of a mixed dipolar liquid near a metal surface: A combined approach of weighted density and perturbative approximations	1017
Sanjib Senapati and Amalendu Chandra	
Biological physics	
Electroporation dynamics in biological cells subjected to ultrafast electrical pulses: A numerical simulation study	1025
R. P. Joshi and K. H. Schoenbach	
Bacterial turgor pressure can be measured by atomic force microscopy	1034
Markus Arnoldi, Monika Fritz, Edmund Bäuerlein, Manfred Radmacher, Erich Sackmann, and Alexei Boulbitch	
Elastic property of single double-stranded DNA molecules: Theoretical study and comparison with experiments	1045
Haijun Zhou, Yang Zhang, and Zhong-can Ou-Yang	
Extinction transition in bacterial colonies under forced convection	1059
T. Neicu, A. Pradhan, D. A. Larochelle, and A. Kudrolli	
Information coding via spontaneous oscillations in neural ensembles	1063
Yuqing Wang and Z. D. Wang	
Structural properties of the sliding columnar phase in layered liquid crystalline systems	1069
L. Golubović, T. C. Lubensky, and C. S. O'Hern	
Spatial evolutionary prisoner's dilemma game with three strategies and external constraints	1095
György Szabó, Tibor Antal, Péter Szabó, and Michel Droz

PHYSICAL REVIEW E

THIRD SERIES, VOLUME 62, NUMBER 1

JULY 2000

Influence of surface treatment on the smectic ordering within porous glass	718
S. Kralj, A. Zidanšek, G. Lahajnar, S. Žumer, and R. Blinc	

PART B

Note to Reader	i
--------------------------	---

Complex fluids, polymers, and granular materials

Structure analysis of regenerated cellulose hydrogels by small-angle and ultra-small-angle x-ray scattering	727
Hitoshi Ando and Toshiki Konishi	
Structure transition in cluster-cluster aggregation under external fields	734
Zhi-Jie Tan, Xian-Wu Zou, Wen-Bing Zhang, and Zhun-Zhi Jin	
Influence of the number of layers on the equilibrium of a granular packing	738
M. A. Aguirre, N. Nerone, A. Calvo, I. Ippolito, and D. Bideau	
Collective response of an array of rotating particles to fluctuating confining forces	744
G. Schliecker, Y. Khidas, M. Ammi, and J.-C. Messenger	
Contact line deposits in an evaporating drop	756
Robert D. Deegan, Olgica Bakajin, Todd F. Dupont, Greg Huber, Sidney R. Nagel, and Thomas A. Witten	
Crossover from the hydrodynamic regime to the thermal fluctuation regime in a two-dimensional phase-separating binary fluid containing surfactants	766
Jiunn-Ren Roan and Chin-Kun Hu	
Segment diffusion and flip-flop spin diffusion in entangled polyethyleneoxide melts: A field-gradient NMR diffusometry study	775
Elmar Fischer, Rainer Kimmich, Nail Fatkullin, and Galina Yatsenko	
Experimental studies of the liquid-glass transition in trimethylheptane	783
G. Q. Shen, J. Toulouse, S. Beaufils, B. Bonello, Y. H. Hwang, P. Finkel, J. Hernandez, M. Bertault, M. Maglione, C. Ecolivet, and H. Z. Cummins	
Chemical waves in self-oscillating gels	793
Kenji Miyakawa, Fumitaka Sakamoto, Ryo Yoshida, Etsuo Kokufuta, and Tomohiko Yamaguchi	
Partitioning of a polymer chain between two confining cavities: The role of electrostatic interactions	799
Stefan Tsonchev, Rob D. Coalson, and Anthony Duncan	
Flow and pattern formation in a binary mixture of rotating granular materials	807
R. Khosropour, E. Valachovic, and B. Lincoln	
Particle characterization using multiple scattering decorrelation methods: Hard-sphere model system	813
Andreas Heymann, Christian Sinn, and Thomas Palberg	
Static and dynamic properties of the backbone network for the irreversible kinetic gelation model	821
Dae Yeun Ki, Kyung Yoon Woo, and Sang Bub Lee	
Simulation of natural convection effects on succinonitrile crystals	828
Robert Tönhardt and Gustav Amberg	
Statistical fractal adsorption isotherms, linear energy relations, and power-law trapping-time distributions in porous media	837
Marcel Ovidiu Vlad, Gianfranco Cerofolini, and John Ross	
Steady adiabatic state: Its thermodynamics, entropy production, energy dissipation, and violation of Onsager relations	845
A. E. Allahverdyan and Th. M. Nieuwenhuizen	
Monodisperse colloidal plates under shear	851
A. B. D. Brown and A. R. Rennie	
Identification of the permeability field of a porous medium from the injection of a passive tracer	863
Lang Zhan and Yannis C. Yortsos

PHYSICAL REVIEW E

THIRD SERIES, VOLUME 62, NUMBER 1

JULY 2000

Thermal lattice Boltzmann simulation for multispecies fluid equilibration	507
Linda Vahala, Darren Wah, George Vahala, Jonathan Carter, and Pavol Pavlo	
Decay rates of internal waves in a fluid near the liquid-vapor critical point	517
K. F. Gurski and R. L. Pego	
Universality of k^{-1} noise, the enstrophy cascade, and the large-scale atmospheric spectrum	525
Kamen N. Beronov	
Velocity cross-correlations and atomic momentum transfer in simple liquids with different potential cores	532
A. Verdaguer and J. A. Padró	
Statistical geometry of cavities in a metastable confined fluid	538
Aleksey Vishnyakov, Pablo G. Debenedetti, and Alexander V. Neimark	
Geometric properties of passive random advection	545
Stanislav A. Boldyrev and Alexander A. Schekochihin	
Difference-quotient turbulence model: Analytical solutions for the core region of plane Poiseuille flow	553
Peter W. Egolf and Daniel A. Weiss	
Distribution of scales in turbulence	564
Haris J. Catrakis	
Hydrogen-bond dynamics for the extended simple point-charge model of water	579
Francis W. Starr, Johannes K. Nielsen, and H. Eugene Stanley	
Adsorption on a periodically corrugated substrate	588
K. Rejmer and M. Napiórkowski	
Isotope effect of diffusion in a simple liquid	597
M. Kluge and H. R. Schober	
Prediction of pattern selection due to an interaction between longitudinal rolls and transverse modes in a flow through a rectangular channel heated from below	601
Yuki Kato and Kaoru Fujimura	
Molecular dynamics simulation of the fragile glass-former orthoterphenyl: A flexible molecule model	612
S. Mossa, R. Di Leonardo, G. Ruocco, and M. Sampoli	
Dynamics of a charged simple fluid with exponential memory and two relaxation times	631
J. E. Flores-Mena and J. L. Carrillo	
Velocity and temperature scaling in a rough wall boundary layer	640
R. A. Antonia and R. J. Smalley	
Liquid crystals	
Thermal fluctuations and x-ray scattering from free-standing smectic-A films	647
L. V. Mirantsev	
Hexagonal symmetry for smectic blue phases	658
B. Pansu, E. Grelet, M. H. Li, and H. T. Nguyen	
Theory of chiral modulations and fluctuations in smectic-A liquid crystals under an electric field	666
Jonathan V. Selinger, Jianling Xu, Robin L. B. Selinger, B. R. Ratna, and R. Shashidhar	
Determination of the thermo-optic coefficients and the thermal conductivities of a ferrofluid-doped lyotropic nematic liquid crystal using a nonlinear optical technique	675
S. L. Gómez and A. M. Figueiredo Neto	
Surface oscillations of smectic-A liquid crystals	681
D. O. Fedorov, V. P. Romanov, and S. V. Ul'yanov	
Surface- and optical-field-induced Fréedericksz transitions and hysteresis in a nematic cell	689
Jianru Shi and Hong Yue	
Coherent x-ray scattering and dynamics of fluctuations in smectic-A and crystal-B films: Continuous model	699
A. N. Shalaginov and D. E. Sullivan	
Defect configurations and dynamical behavior in a Gay-Berne nematic emulsion	711
Jeffrey L. Billeter and Robert A. Pelcovits

PHYSICAL REVIEW E

THIRD SERIES, VOLUME 62, NUMBER 1

JULY 2000

Maximal work problem in finite-time thermodynamics	307
Anatoly M. Tsirlin and Vladimir Kazakov	
Theory of controlling stochastic resonance	317
Markus Löcher, Mario E. Inchiosa, Joseph Neff, Adi Bulsara, Kurt Wiesenfeld, Luca Gammaitoni, Peter Hänggi, and William Ditto	
Correlation functions in the factorization approach of nonextensive quantum statistics	328
Marcelo R. Ubriaco	

Chaos and nonlinear dynamical systems

Full instability behavior of N -dimensional dynamical systems with a one-directional nonlinear vector field	333
J. Rius, M. Figueras, R. Herrero, F. Pi, J. Farjas, and G. Orriols	
Multibaker map for thermodynamic cross effects in dynamical systems	349
László Mátyás, Tamás Tél, and Jürgen Vollmer	
Front propagation and pattern formation in anisotropic bistable media	366
Markus Bär, Aric Hagberg, Ehud Meron, and Uwe Thiele	
Intermingled basins and on-off intermittency in a multistate system	375
Meng Zhan and Gang Hu	
Delayed-feedback control of spatial bifurcations and chaos in open-flow models	384
Keiji Konishi, Hideki Kokame, and Kentaro Hirata	
Dynamic quasicrystalline patterns: Wave-mode-Turing-mode resonance with Turing-mode self-interaction	389
Ziad H. Musslimani and Len M. Pismen	
Intermingled basins due to finite accuracy	397
Malte Schmick, Eric Goles, and Mario Markus	
Collective phase slips and phase synchronizations in coupled oscillator systems	402
Zhigang Zheng, Bambi Hu, and Gang Hu	
Short-time effects on eigenstate structure in Sinai billiards and related systems	409
L. Kaplan and E. J. Heller	
Chaos or noise: Difficulties of a distinction	427
M. Cencini, M. Falcioni, E. Olbrich, H. Kantz, and A. Vulpiani	
Phase synchronization of coupled Ginzburg-Landau equations	438
Lutz Junge and Ulrich Parlitz	
Quantum response for chaotic resonances	442
A. Iomin	
Spectroscopic studies in open quantum systems	450
I. Rotter, E. Persson, K. Pichugin, and P. Seba	
Unstable dimension variability and synchronization of chaotic systems	462
Ricardo L. Viana and Celso Grebogi	

Classical fluids

Magnetic compensation of gravity forces in (p-) hydrogen near its critical point: Application to weightless conditions	469
R. Wunenburger, D. Chatain, Y. Garrabos, and D. Beysens	
Local Marangoni number at the onset of hydrothermal waves	477
Miguel Angel Pelacho, Angel Garcimartín, and Javier Burguete	
Symmetries, invariants, and cascades in a shell model of turbulence	484
P. D. Ditlevsen	
Statistics of velocity fluctuations arising from a random distribution of point vortices: The speed of fluctuations and the diffusion coefficient	490
Pierre-Henri Chavanis and Clément Sire

THIRD SERIES, VOLUME 62, NUMBER 1

JULY 2000

Non-Turing stationary patterns in flow-distributed oscillators with general diffusion and flow rates	113
Razvan A. Satnoianu and Michael Menzinger	
Anomalous diffusion and the first passage time problem	120
Govindan Rangarajan and Mingzhou Ding	
Many-body partition function and thermal Hartree-Fock approximations	134
B. Farid, N. H. March, and A. K. Theophilou	
Front propagation in one-dimensional autocatalytic reactions: The breakdown of the classical picture at small particle concentrations	141
J. Mai, I. M. Sokolov, and A. Blumen	
Numerical verification of bona fide stochastic resonance	146
F. Marchesoni, L. Gammaitoni, F. Apostolico, and S. Santucci	
Power spectrum and detrended fluctuation analysis: Application to daily temperatures	150
Peter Talkner and Rudolf O. Weber	
Multiparticle biased diffusion-limited aggregation with surface diffusion: A comprehensive model of electrodeposition	161
Mario Castro, Rodolfo Cuerno, Angel Sánchez, and Francisco Domínguez-Adame	
Short-time dynamics and magnetic critical behavior of the two-dimensional random-bond Potts model	174
He-Ping Ying and Kenji Harada	
Error-correcting codes and image restoration with multiple stages of dynamics	179
K. Y. Michael Wong and Hidetoshi Nishimori	
Universality class of thermally diluted Ising systems at criticality	191
Manuel I. Marqués, Julio A. Gonzalo, and Jorge Íñiguez	
Passage through a barrier with a slowly increasing control parameter	197
C. Nicolis and G. Nicolis	
Mean-field approximations to the longest common subsequence problem	204
J. Boutet de Monvel	
Fluctuation-response relations for multitime correlations	210
Gregory L. Eyink	
Collective diffusion and a random energy landscape	221
Michael Schulz and Steffen Trimper	
Evaluation of the smallest nonvanishing eigenvalue of the Fokker-Planck equation for the Brownian motion in a potential. II. The matrix continued fraction approach	227
Yu. P. Kalmykov	
Critical transitions in colliding cascades	237
A. Gabrielov, V. Keilis-Borok, I. Zaliapin, and W. I. Newman	
Percolation in sign-symmetric random fields: Topological aspects and numerical modeling	250
Alexander V. Milovanov and Gaetano Zimbardo	
Incoherent neutron scattering functions for diffusion inside two concentric spheres	261
D. J. Bicut	
Transport in nonequilibrium systems with position-dependent mobility	272
Rolf H. Luchsinger	
Extremal-point densities of interface fluctuations	276
Z. Toroczkai, G. Korniss, S. Das Sarma, and R. K. P. Zia	
Bak-Sneppen model near zero dimension	295
S. N. Dorogovtsev, J. F. F. Mendes, and Yu. G. Pogorelov	
Intrawell stochastic resonance versus interwell stochastic resonance in underdamped bistable systems	299
L. Alfonsi, L. Gammaitoni, S. Santucci, and A. R. Bulsara	
Canonical solution of a system of long-range interacting rotators on a lattice	303
Alessandro Campa, Andrea Giansanti, and Daniele Moroni
