THIRD SERIES, VOLUME 62, NUMBER 3
PARTS A AND B

CONTENTS

SEPTEMBER 2000

The Table of Contents is a total listing of Parts A and B.
Part A consists of pages R3019–3678, and Part B pages 3679–4488.

PART A

Note to Reader i

RAPID COMMUNICATIONS

General methods of statistical physics

Exact solution of the specific-heat–phonon spectrum inversion from the Möbius inverse formula R3019
DengMing Ming, Tao Wen, JiXin Dai, Xianxi Dai, and William E. Evenson

Economic fluctuations and anomalous diffusion R3023
Vasiliki Plerou, Parameswaran Gopikrishnan, Luís A. Nunes Amaral, Xavier Gabaix, and H. Eugene Stanley

Critical behavior of the one-dimensional annihilation-fission process $2A \rightarrow \emptyset$, $2A \rightarrow 3A$ R3027
Géza Ódor

Stochastic resonance enhanced by dichotomic noise in a bistable system R3031
Robert Rozenfeld, Alexander Neiman, and Lutz Schimansky-Geier

Chaos and nonlinear dynamical systems

Resonance poles and width distribution for time-reversal transport through mesoscopic open billiards R3035
H. Ishio

Nonautonomous and nonlinear effects in generalized classical oscillators: A boundedness theorem R3039
L. Ferrari and C. Degli Esposti Boschi

Analytical study of spatiotemporal chaos control by applying local injections R3043
Hu Gang, Xiao Jinghua, Gao Jihua, Li Xiangming, Yao Yugui, and Bambi Hu

Classical fluids

Analytic solution for two bubbles in a Hele-Shaw cell R3047
Giovani L. Vasconcelos

Asymmetric squares as standing waves in Rayleigh-Bénard convection R3051
Alaka Das, Ujjal Ghosal, and Krishna Kumar

Liquid crystals

Atomic force microscope evidence for the existence of smecticlike surface layers in the isotropic phase of a nematic liquid crystal R3055
K. Kočevar, R. Blinc, and I. Muševič

Copyright 2000 by The American Physical Society

(Continued)

1063-651X(200009)62:3:A;1-R

PHYSICAL REVIEW E THIRD SERIES, VOLUME 62, NUMBER 3 SEPTEMBER 2000

Complex fluids, polymers, and granular materials

Viscous flow and coarsening of microdomains in diblock copolymer thin films R3059
Iulia Podariu, Zhenyu Shou, and Amitabha Chakrabarti
Shear-induced transitions in a ternary polymeric system R3063
A. V. Zvelindovsky, G. J. A. Sevink, and J. G. E. M. Fraaije

Plasma physics

Extrema in transition energies resulting not in satellites but in dips within spectral lines R3067
E. Oks and E. Leboucher-Dalimier

Classical physics, including nonlinear media

Soliton stability versus collapse R3071
Luc Bergé
Rules for the distribution of point charges on a conducting disk R3075
Ş. Erkoç and H. Oymak

ARTICLES

General methods of statistical physics

Theory of stress fluctuations 3077
Duane C. Wallace
Log-periodic oscillations for a uniform spin model on a fractal 3083
J. C. Lessa and R. F. S. Andrade
Anderson localization as a parametric instability of the linear kicked oscillator 3090
L. Tessieri and F. M. Izrailev
Physical nature of higher-order mutual information: Intrinsic correlations and frustration 3096
Hiroyuki Matsuda
Surface hardening and self-organized fractality through etching of random solids 3103
A. Gabrielli, A. Baldassarri, and B. Sapoval
Simulation of the Wiener sausage 3116
D.-Y. Yang, Yu. A. Makhnovskii, S.-Y. Sheu, and S. H. Lin
River networks on the slope-correlated landscape 3121
Hyun-Joo Kim, In-mook Kim, and Jin Min Kim
Fractal geometry of critical systems 3125
N. G. Antoniou, Y. F. Contoyiannis, and F. K. Diakonos
Fractional quantum mechanics 3135
Nick Laskin
Analysis of time series from stochastic processes 3146
Janez Gradišek, Silke Siegert, Rudolf Friedrich, and Igor Grabec
Macroscopic effects of the perturbation of the particle velocity distribution in a trigger wave 3156
A. Lemarchand and B. Nowakowski
Propagating structures in globally coupled systems with time delays 3167
Damián H. Zanette
Random resistor-diode networks and the crossover from isotropic to directed percolation 3173
Hans-Karl Janssen and Olaf Stenull
Exact calculation of the spatiotemporal correlations in the Takayasu model and in the q model of force fluctuations in bead packs 3186
R. Rajesh and Satya N. Majumdar

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 62, NUMBER 3** **SEPTEMBER 2000**

Dynamics and changing environments in highly optimized tolerance 3197
Tong Zhou and J. M. Carlson
Finite size scaling for percolation on elongated lattices in two and three dimensions 3205
S. J. Marrink and Mark A. Knackstedt
Forest-fire models as a bridge between different paradigms in self-organized criticality 3215
Proshun Sinha-Ray and Henrik Jeldtoft Jensen
Roughening and super-roughening in the ordered and random two-dimensional sine-Gordon models 3219
Angel Sánchez, A. R. Bishop, and Esteban Moro
Periodic elastic medium in which periodicity is relevant 3230
E. T. Seppälä, M. J. Alava, and P. M. Duxbury
Origin of banded patterns in natural sphalerite 3234
Ivan L'Heureux
Microscopic dynamics underlying anomalous diffusion 3246
G. Kaniadakis and G. Lapenta
Occupancy of a single site by many random walkers 3250
M. Boguñá, A. M. Berezhkovskii, and G. H. Weiss
Crossover behavior in ^{3}He and Xe near their liquid-vapor critical point 3257
Erik Luijten and Horst Meyer
Spontaneous symmetry breaking in the finite lattice quantum sine-Gordon model 3262
S. G. Chung
Scaling of avalanche queues in directed dissipative sandpiles 3266
Bosiljka Tadić and Vyatcheslav Priezzhev
Two-species reaction-diffusion system with equal diffusion constants: Anomalous density decay at large times . . . 3276
Zoran Konkoli and Henrik Johannesson
Generalization of Nosé and Nosé-Hoover isothermal dynamics 3281
A. C. Brańka and K. W. Wojciechowski
Multifractal phase transitions in the non-Debye relaxation processes 3293
Alexander Leyderman and Shi-Xian Qu
Growth with surface curvature on quenched potentials 3299
Jae Hwan Lee, Soo Kyung Kim, and Jin Min Kim
Master equation approach to synchronization in diffusion-coupled nonlinear oscillators 3303
William Vance and John Ross
Mean first-passage time for an overdamped particle in a disordered force field 3311
S. I. Denisov and Werner Horsthemke
Phase transitions in a simple growth model for a driven interface in random media 3322
Kwangho Park and In-mook Kim
Generalized model for dynamic percolation 3327
O. Bénichou, J. Klafter, M. Moreau, and G. Oshanin
Asymptotic properties of a reversible $A+B\leftrightarrow C$ (static) reaction-diffusion process with initially separated reactants 3340
Misha Sinder and Joshua Pelleg
Multibunch solutions of the differential-difference equation for traffic flow 3349
Ken Nakanishi
Generic criticality in a model of evolution 3356
Adam Lipowski
Replica-symmetry-breaking transition in finite-size simulations 3360
Koji Hukushima and Hikaru Kawamura
Unusual dynamical scaling in the spatial distribution of persistent sites in one-dimensional Potts models 3366
A. J. Bray and S. J. O'Donoghue

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 62, NUMBER 3 SEPTEMBER 2000

Dynamical self-affinity of damage spreading in surface growth models 3376
Yup Kim and C. K. Lee
Overdamped van Hove function of colloidal suspensions 3382
Laura Yeomans-Reyna and Magdaleno Medina-Noyola
Vineyard-like approximations for colloid dynamics 3395
Laura Yeomans-Reyna, Heriberto Acuña-Campa, and Magdaleno Medina-Noyola
Slow dynamics of Ising models with energy barriers 3404
A. Lipowski, D. Johnston, and D. Espriu
Six-vertex model with domain wall boundary conditions and one-matrix model 3411
P. Zinn-Justin

Chaos and nonlinear dynamical systems

Using topological statistics to detect determinism in time series 3419
Guillermo J. Ortega and Enrique Louis
Towards the thermodynamics of localization processes 3429
Paolo Grigolini, Marco G. Pala, Luigi Palatella, and Roberto Roncaglia
Synchronization in populations of globally coupled oscillators with inertial effects 3437
J. A. Acebrón, L. L. Bonilla, and R. Spigler
Stabilizing unstable discrete systems by a nonuniformly adaptive adjustment mechanism 3455
Weihong Huang
Quantitative study of amplitude noise effects on dynamical localization 3461
Daniel A. Steck, Valery Milner, Windell H. Oskay, and Mark G. Raizen
Periodic orbit effects on conductance peak heights in a chaotic quantum dot 3476
L. Kaplan
Periodicity manifestations in the turbulent regime of the globally coupled map lattice 3489
Tokuzo Shimada and Kengo Kikuchi
Quantum chaos border for quantum computing 3504
B. Georgeot and D. L. Shepelyansky
Structure of motion near saddle points and chaotic transport in Hamiltonian systems 3508
S. S. Abdullaev
Tracking sustained chaos: A segmentation method 3529
Ioana Triandaf and Ira B. Schwartz
Bayesian reconstruction of chaotic dynamical systems 3535
Renate Meyer and Nelson Christensen
Synchronization and chaotic masking scheme based on occasional coupling 3543
Ömer Morgül
Nonlocal chaotic phase synchronization 3552
Meng Zhan, Zhi-gang Zheng, Gang Hu, and Xi-hong Peng
Characteristic polynomials of random matrices at edge singularities 3558
Edouard Brézin and Shinobu Hikami
Theory for matrix elements of one-body transition operators in the quantum chaotic domain of interacting particle systems 3568
V. K. B. Kota and R. Sahu

Classical fluids

Nature of self-diffusion and viscosity in supercooled liquid water 3572
T. V. Lokotosh, S. Magazù, G. Maisano, and N. P. Malomuzh
Upper bounds on convective heat transport in a rotating fluid layer of infinite Prandtl number: Case of intermediate Taylor numbers 3581
Nikolay K. Vitanov

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 62, NUMBER 3 SEPTEMBER 2000

Instanton calculus in shell models of turbulence 3592
Isabelle Daumont, Thierry Dombre, and Jean-Louis Gilson
High-resolution neutron scattering measurement of the dynamic structure factor of heavy water 3611
C. Petrillo, F. Sacchetti, B. Dorner, and J.-B. Suck
Convection in two-layer systems with an anomalous thermocapillary effect 3619
L. M. Braverman, K. Eckert, A. A. Nepomnyashchy, I. B. Simanovskii, and A. Thess
Flow and dispersion through a close-packed fixed bed of spheres 3632
A. M. Reynolds, S. V. Reavell, and B. B. Harral
Analytic example of a free energy functional 3640
Christian Tutschka and Gerhard Kahl
Phase diagram of a hard-sphere system in a quenched random potential: A numerical study 3648
Chandan Dasgupta and Oriol T. Valls
Possible universal transitional scenario in a flat plate boundary layer: Measurement and visualization 3659
C. B. Lee
Effects of dispersion forces on the structure and thermodynamics of fluid krypton 3671
N. Jakse, J. M. Bomont, I. Charpentier, and J. L. Bretonnet

PART B

Note to Reader i

Liquid crystals

Deuteron NMR study of molecular dynamics in a compound exhibiting a reentrant nematic phase 3679
R. Y. Dong, A. Carvalho, P. J. Sebastião, and H. T. Nguyen
Phase behavior and blue-phase-III–isotropic critical point in (*R*)-(*S*) mixtures of a chiral liquid crystal with a direct twist-grain-boundary to blue-phase transition 3687
P. Jamée, G. Pitsi, M. -H. Li, H. -T. Nguyen, G. Sigaud, and J. Thoen
Dilution of nematic surface potentials: Relaxation dynamics 3694
André M. Sonnet, Epifanio G. Virga, and Georges E. Durand
Dynamical studies of gratings formed in polymer-dispersed liquid crystal films doped with a guest-host dye 3702
Andy Y.-G. Fuh, M.-S. Tsai, C.-R. Lee, and Y.-H. Fan
Density-functional theory of inhomogeneous systems of hard spherocylinders 3708
E. Velasco, L. Mederos, and D. E. Sullivan
Twist-energy-driven Helfrich modulations in cholesteric liquid crystals illustrated in the transient planar to planar transition 3719
P. Watson, J. E. Anderson, and P. J. Bos
Molecular model for the anticlinic smectic-C_A phase 3724
Mikhail A. Osipov and Atsuo Fukuda
Buckling induced by dilative strain in two- and three-dimensional layered materials 3736
Sherwin J. Singer
Coupling between meniscus and smectic-*A* films: Circular and catenoid profiles, induced stress, and dislocation dynamics 3747
Frédéric Picano, Robert Hołyst, and P. Oswald
Uniplanar smectic phases in free-standing films 3758
Barbara Rovšek, Mojca Čepič, and Boštjan Žekš
Dynamical and field effects in polymer-dispersed liquid crystals: Monte Carlo simulations of NMR spectra 3766
C. Chiccoli, P. Pasini, G. Skačej, C. Zannoni, and S. Žumer
Alignment and phase transition induced by surface action in lyotropic nematic liquid crystals 3775
J. J. Bonvent, I. H. Bechtold, M. L. Vega, and E. A. Oliveira

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 62, NUMBER 3 SEPTEMBER 2000

Complex fluids, polymers, and granular materials

Four-dimensional polymer collapse: Pseudo-first-order transition in interacting self-avoiding walks 3780
T. Prellberg and A. L. Owczarek
Four-phase patterns in forced oscillatory systems 3790
A. L. Lin, A. Hagberg, A. Ardelea, M. Bertram, H. L. Swinney, and E. Meron
Density functional for additive mixtures 3799
Matthias Schmidt
Clumps of randomly charged polymers: Molecular dynamics simulation of condensation, crystallization, and swelling 3803
Motohiko Tanaka and Toyoichi Tanaka
Instability of symmetric Couette flow in a granular gas: Hydrodynamic field profiles and transport 3817
M. Sasvári, J. Kertész, and D. E. Wolf
Single-particle motion in three-dimensional vibrofluidized granular beds 3826
R. D. Wildman, J. M. Huntley, J.-P. Hansen, D. J. Parker, and D. A. Allen
Nonlinear analysis of the shearing instability in granular gases 3836
R. Soto, M. Mareschal, and M. Malek Mansour
Tracking of individual nanocrystals using diffracted x rays 3843
Y. C. Sasaki, Y. Suzuki, N. Yagi, S. Adachi, M. Ishibashi, H. Suda, K. Toyota, and M. Yanagihara
Magnetoviscosity and relaxation in ferrofluids 3848
B. U. Felderhof
Effective interactions and volume energies in charged colloids: Linear response theory 3855
A. R. Denton
Shape transitions of giant liposomes induced by an anisotropic spontaneous curvature 3865
O. Sandre, C. Ménager, J. Prost, V. Cabuil, J.-C. Bacri, and A. Cebers
Shear-induced structural transitions in Newtonian non-Newtonian two-phase flow 3871
G. Cristobal, J. Rouch, A. Colin, and P. Panizza
Structure of charged colloids under a wedge confinement 3875
B. V. R. Tata, Dezsö Boda, D. Henderson, A. Nikolov, and D. T. Wasan
Numerical study of stress distribution in sheared granular material in two dimensions 3882
S. G. Bardenhagen, J. U. Brackbill, and D. Sulsky
Rolling of unsaturated porous materials: Evolution of a fully saturated zone 3891
K. Velten and W. Best
Computer simulation of the packing of fine particles 3900
R. Y. Yang, R. P. Zou, and A. B. Yu
Direct measurements of constrained Brownian motion of an isolated sphere between two walls 3909
Binhua Lin, Jonathan Yu, and Stuart A. Rice
Theoretical continuous equation derived from the microscopic dynamics for growing interfaces in quenched media 3920
L. A. Braunstein, R. C. Buceta, C. D. Archubi, and G. Costanza
Enhanced stability of layered phases in parallel hard spherocylinders due to addition of hard spheres 3925
Zvonimir Dogic, Daan Frenkel, and Seth Fraden
Photonic Hall effect in ferrofluids: Theory and experiments 3934
D. Lacoste, F. Donatini, S. Neveu, J. A. Serughetti, and B. A. Van Tiggelen
Estimation of critical points of branched polymers 3944
Kazumi Suematsu and Minoru Kohno
Adiabatic hypercooling of binary melts 3954
Kirk Brattkus

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 62, NUMBER 3 SEPTEMBER 2000

Biological physics

Simple model for the DNA denaturation transition 3958
Maria Serena Causo, Barbara Coluzzi, and Peter Grassberger
Shape instability of a biomembrane driven by a local softening of the underlying actin cortex 3974
A. Boulbitch, R. Simson, D. A. Simson, R. Merkel, W. Häckl, M. Bärmann, and E. Sackmann
Influence of molecular flexibility on DNA radiosensitivity: A simulation study 3986
D. Viduna, K. Hinsen, and G. Kneller
Glasslike dynamical behavior of the plastocyanin hydration water 3991
Anna Rita Bizzarri, Alessandro Paciaroni, and Salvatore Cannistraro
Structural information from multilamellar liposomes at full hydration: Full q-range fitting with high quality x-ray data 4000
Georg Pabst, Michael Rappolt, Heinz Amenitsch, and Peter Laggner
Synchronization of laser oscillators, associative memory, and optical neurocomputing 4010
Frank C. Hoppensteadt and Eugene M. Izhikevich
DNA electrophoresis in a monodisperse porous medium 4014
L. Meistermann and B. Tinland
Scaling-violation phenomena and fractality in the human posture control systems 4018
Stefan Thurner, Christian Mittermaier, Rudolf Hanel, and Klaus Ehrenberger
Dynamical chaos and power spectra in toy models of heteropolymers and proteins 4025
Mai Suan Li, Marek Cieplak, and Nazar Sushko
Random population dispersal in a linear hostile environment 4032
S. Harris
Many-body approach to the dynamics of batch learning 4036
K. Y. Michael Wong, S. Li, and Y. W. Tong
Alternans and the onset of ventricular fibrillation 4043
Harold M. Hastings, Flavio H. Fenton, Steven J. Evans, Omer Hotomaroglu, Jagannathan Geetha, Ken Gittelson, John Nilson, and Alan Garfinkel
Competing neural networks: Finding a strategy for the game of matching pennies 4049
Inés Samengo and Damián H. Zanette
Period-adding bifurcations and chaos in a periodically stimulated excitable neural relaxation oscillator 4057
S. Coombes and A. H. Osbaldestin
Quantitative analysis of concentration gradient and ionic currents associated with hyphal tip growth in fungi 4067
L. Limozin and B. Denet
Dynamics of temporal learning rules 4077
Patrick D. Roberts

Plasma physics

Electron transport in argon in crossed electric and magnetic fields 4083
Kevin Ness and Toshiaki Makabe
Bremsstrahlung from thick targets and a diagnostic for electron energy distributions 4091
M. Lamoureux, P. Waller, P. Charles, and N. B. Avdonina
Dielectronic recombination in plasmas: The final state distribution 4096
Gaber Omar and Yukap Hahn
Influence of the tritium β^- decay on low-temperature thermonuclear burn-up in deuterium-tritium mixtures 4104
Alexei M. Frolov
Asymptotic evolution of nonlinear Landau damping 4109
M. Brunetti, F. Califano, and F. Pegoraro
Viscosity estimates for strongly coupled Yukawa systems 4115
M. S. Murillo

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 62, NUMBER 3 SEPTEMBER 2000

Relativistic focusing and ponderomotive channeling of intense laser beams 4120
B. Hafizi, A. Ting, P. Sprangle, and R. F. Hubbard
Influence of a dense plasma on the fine-structure levels of a hydrogenic ion 4126
Debasis Ray
Second harmonic autoresonant control of the $l=1$ diocotron mode in pure-electron plasmas 4131
J. Fajans, E. Gilson, and L. Friedland
Stark broadening parameters of the Kr II and Kr III spectral lines 4137
V. Milosavljević, S. Djeniže, M. S. Dimitrijević, and L. Č. Popović
Relativistic solitons in magnetized plasmas 4146
Daniela Farina, Maurizio Lontano, and Sergei Bulanov
Modeling of gas dynamics for a laser-generated plasma: Propagation into low-pressure gases 4152
H. C. Le, D. E. Zeitoun, J. D. Parisse, M. Sentis, and W. Marine
Laser-excited Mach cones in a dusty plasma crystal 4162
A. Melzer, S. Nunomura, D. Samsonov, Z. W. Ma, and J. Goree
Circular polarization induced by scintillation in a magnetized medium 4177
J.-P. Macquart and D. B. Melrose

Physics of beams

Dynamics of a charged particle in a circularly polarized traveling electromagnetic wave 4189
A. Bourdier and S. Gond
Effective coupling of cyclotron autoresonance maser and ''gyrotron'' modes on a phase-synchronized electron beam 4207
A. V. Savilov, V. L. Bratman, A. D. R. Phelps, and S. V. Samsonov
Formation of low time-bandwidth product, single-sided exponential optical pulses in free-electron laser oscillators 4216
A. M. MacLeod, X. Yan, W. A. Gillespie, G. M. H. Knippels, D. Oepts, A. F. G. van der Meer, C. W. Rella, T. I. Smith, and H. A. Schwettman
Correlation functions and spin 4221
Tomáš Tyc
Parametric x-ray radiation and coherent bremsstrahlung from nonrelativistic electrons in crystals 4225
I. D. Feranchuk, A. Ulyanenkov, J. Harada, and J. C. H. Spence

Classical physics, including nonlinear media

Driven kink in the Frenkel-Kontorova model 4235
O. M. Braun, Bambi Hu, and A. Zeltser
Gap solitons in quadratically nonlinear gratings: Beyond the cascading limit 4246
Takeshi Iizuka and C. Martijn de Sterke
Radiating dipoles in photonic crystals 4251
Kurt Busch, Nipun Vats, Sajeev John, and Barry C. Sanders
Unified description of nondiffracting X and Y waves 4261
J. Salo, J. Fagerholm, A. T. Friberg, and M. M. Salomaa
Analog of the Wigner-Moyal equation for the electromagnetic field 4276
J. T. Mendonça and N. L. Tsintsadze
Instabilities of dispersion-managed solitons in the normal dispersion regime 4283
Dmitry E. Pelinovsky
Collective topological dynamics in the Frenkel-Kontorova chains 4294
Zhigang Zheng and Bambi Hu
Dynamics of quasicollapse in nonlinear Schrödinger systems with nonlocal interactions 4300
Víctor M. Pérez-García, Vladimir V. Konotop, and Juan J. García-Ripoll

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 62, NUMBER 3 SEPTEMBER 2000

Higher-order nonlinear modes and bifurcation phenomena due to degenerate parametric four-wave mixing 4309
Kazimir Y. Kolossovski, Alexander V. Buryak, Victoria V. Steblina, Alan R. Champneys, and Rowland A. Sammut
Electromagnetic contributions to single-molecule sensitivity in surface-enhanced Raman scattering 4318
Hongxing Xu, Javier Aizpurua, Mikael Käll, and Peter Apell
Polarization dynamics of solitons in birefringent fibers 4325
S. M. Baker, J. N. Elgin, and J. Gibbons

Computational physics

Simulated annealing for topological solitons 4333
Mark Hale, Oliver Schwindt, and Tom Weidig
Calculation of the first excited $^1S^e$ state of the He atom using supersymmetric quantum mechanics and extension to the nth excitation 4347
Tapan Kumar Das and Barnali Chakrabarti
Spectral filters in quantum mechanics: A measurement theory perspective 4351
Amrendra Vijay and Robert E. Wyatt
Fast algorithm for finding the eigenvalue distribution of very large matrices 4365
Anthony Hams and Hans De Raedt

BRIEF REPORTS

General methods of statistical physics

Coexistence of excited states in confined Ising systems 4378
Andrzej Drzewiński
Momentum conservation and local field corrections for the response of interacting Fermi gases 4382
Klaus Morawetz and Uwe Fuhrmann
Equilibrium distribution of gas molecules adsorbed on an active surface 4386
Stephen L. Adler and Indrajit Mitra
Quantifying nonstationary radioactivity concentration fluctuations near Chernobyl: A complete statistical description 4389
G. M. Viswanathan, S. V. Buldyrev, E. K. Garger, V. A. Kashpur, L. S. Lucena, A. Shlyakhter, H. E. Stanley, and J. Tschiersch
Theory of the evolutionary minority game 4393
T. S. Lo, P. M. Hui, and N. F. Johnson
Cumulant ratios and their scaling functions for Ising systems in a strip geometry 4397
Andrzej Drzewiński and Jacek Wojtkiewicz
First-order transition with power-law singularity in models with absorbing states 4401
Adam Lipowski
Relaxation properties of small-world networks 4405
S. Jespersen, I. M. Sokolov, and A. Blumen

Chaos and nonlinear dynamical systems

Environment-induced dynamical chaos 4409
Bidhan Chandra Bag and Deb Shankar Ray
Analyzing Lyapunov spectra of chaotic dynamical systems 4413
F. K. Diakonos, D. Pingel, and P. Schmelcher

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 62, NUMBER 3 SEPTEMBER 2000

Suppressing complexity via the slaving principle 4417
Shunguang Wu, Kaifen He, and Zuqia Huang

Classical fluids

Laser wipers 4421
A. N. Karpetis, C. M. White, and K. R. Sreenivasan
Visualization of the space-time impulse response of the subcritical wake of a cylinder 4424
P. Le Gal and V. Croquette
Equivalence of two approaches for the inhomogeneous density in the canonical ensemble 4427
J. A. White and S. Velasco

Liquid crystals

Director rotation via photoinduced differential depletion in nematic dyes 4431
M. Warner and S. V. Fridrikh

Complex fluids, polymers, and granular materials

β relaxation of nonpolymeric liquids close to the glass transition 4435
Niels Boye Olsen, Tage Christensen, and Jeppe C. Dyre
Structural stability of simple fluids and accuracy of integral-equation theories 4439
G. Malescio and P. V. Giaquinta
Hysteresis and packing in gas-fluidized beds 4442
R. Ojha, N. Menon, and D. J. Durian
Granular flow in a three-dimensional rotating container 4446
T. Elperin and A. Vikhansky

Biological physics

Symmetries of independent statistical observables for ultrametric populations 4450
B. G. Giraud
Dielectric $1/f$ noise of proton glass on a hydrated protein surface 4454
Giorgio Careri and Giuseppe Consolini

Plasma physics

Hemispherical dynamos generated by convection in rotating spherical shells 4457
E. Grote and F. H. Busse
Soft-x-ray emission from small-sized Ne clusters heated by intense, femtosecond laser pulses 4461
T. Mocek, C. M. Kim, H. J. Shin, D. G. Lee, Y. H. Cha, K. H. Hong, and C. H. Nam

Classical physics, including nonlinear media

Description of random radiating and nonradiating sources 4465
Edwin A. Marengo and Richard W. Ziolkowski

Computational physics

Solution of a separable Smoluchowski equation in one spatial dimension 4469
I. Klik and Y. D. Yao
Efficiency of generalized simulated annealing 4473
Y. Xiang and X. G. Gong
