PHYSICAL REVIEW E THIRD SERIES, VOLUME 81, NUMBER 5 MAY 2010

BRIEF REPORTS

Statistical physics

Scaling of connected spin avalanches in growing networks *(4 pages)* 052101
Joanna Tomkowicz and Krzysztof Kułakowski

Granular materials

Shape-mediated ordering in granular blends *(4 pages)* 052301
Keirnan R. LaMarche, Matthew J. Metzger, Benjamin J. Glasser, and Troy Shinbrot

ARTICLES

Colloidal dispersions, suspensions, and aggregates

Crystal structure of highly concentrated, ionic microgel suspensions studied by small-angle x-ray scattering *(6 pages)* 052401
U. Gasser and A. Fernandez-Nieves

BRIEF REPORTS

Biological physics

Self-sustained biochemical oscillations and waves with a feedback determined only by boundary conditions *(4 pages)* 052901
E. B. Postnikov, A. Yu. Verisokin, D. V. Verveyko, and A. I. Lavrova

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 81, NUMBER 5** **MAY 2010**

Undulation instability in a bilayer lipid membrane due to electric field interaction with lipid dipoles *(11 pages)* 051909
Richard J. Bingham, Peter D. Olmsted, and Stephen W. Smye

Denaturation patterns in heterogeneous DNA *(9 pages)* 051910
Marco Zoli

Membrane interactions control residue fluctuations of outer membrane porins *(7 pages)* 051911
A. B. Besya, H. Mobasheri, and M. R. Ejtehadi

Model of ionic currents through microtubule nanopores and the lumen *(11 pages)* 051912
Holly Freedman, Vahid Rezania, Avner Priel, Eric Carpenter, Sergei Y. Noskov, and Jack A. Tuszynski

Entropically modified spiking ability and periodicity in clustered channels *(7 pages)* 051913
Jianwei Shuai, Rong Sheng, and Peter Jung

Force-induced destabilization of focal adhesions at defined integrin spacings on nanostructured surfaces *(7 pages)* 051914
Alex G. F. de Beer, E. Ada Cavalcanti-Adam, Günter Majer, M. Lopez-García, H. Kessler, and Joachim P. Spatz

Mechanics of the power stroke in myosin II *(8 pages)* 051915
L. Marcucci and L. Truskinovsky

Recombination in one- and two-dimensional fitness landscapes *(9 pages)* 051916
Zh. Avetisyan and David B. Saakian

Eigenvalue distributions for a class of covariance matrices with application to Bienenstock-Cooper-Munro neurons under noisy conditions *(7 pages)* 051917
Armando Bazzani, Gastone C. Castellani, and Leon N Cooper

Ionization penalty in nonlinear optical bioimaging *(7 pages)* 051918
A. A. Voronin and A. M. Zheltikov

Thermodynamics of nanospheres encapsulated in virus capsids *(11 pages)* 051919
Antonio Šiber, Roya Zandi, and Rudolf Podgornik

Discreteness-induced slow relaxation in reversible catalytic reaction networks *(8 pages)* 051920
Akinori Awazu and Kunihiko Kaneko

Cooperation between giant DNA molecules and actin filaments in a microsphere *(5 pages)* 051921
Makiko Negishi, Takahiro Sakaue, Kingo Takiguchi, and Kenichi Yoshikawa

Toward an understanding of fibrin branching structure *(9 pages)* 051922
Aaron L. Fogelson and James P. Keener

Contribution of double scattering to structural coloration in quasiordered nanostructures of bird feathers *(8 pages)* 051923
Heeso Noh, Seng Fatt Liew, Vinodkumar Saranathan, Richard O. Prum, Simon G. J. Mochrie, Eric R. Dufresne, and Hui Cao

Cellular deformation and intracellular stress propagation during optical stretching *(12 pages)* 051924
Soo-Kng Teo, Andrew B. Goryachev, Kim H. Parker, and K.-H. Chiam

Speeding up disease extinction with a limited amount of vaccine *(11 pages)* 051925
M. Khasin, M. I. Dykman, and B. Meerson

Different pulling modes in DNA overstretching: A theoretical analysis *(5 pages)* 051926
D. Marenduzzo, E. Orlandini, F. Seno, and A. Trovato

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 81, NUMBER 5 MAY 2010

Anisotropic behavior of water in ferroelectric liquid crystals *(7 pages)* 051707
G. Singh, A. Choudhary, G. Vijaya Prakash, and A. M. Biradar

Direct visualization and measurement of the extrapolation length on cooling toward the nematic–smectic-*A* phase transition temperature *(4 pages)* 051708
Yoonseuk Choi and Charles Rosenblatt

Smectic membranes in aqueous environment *(7 pages)* 051709
Yasutaka Iwashita, Stephan Herminghaus, Ralf Seemann, and Christian Bahr

Tricritical phenomena at the Fréedericksz transition in ferronematic liquid crystals *(9 pages)* 051710
D. V. Makarov and A. N. Zakhlevnykh

Shear-stress-controlled dynamics of nematic complex fluids *(9 pages)* 051711
Sabine H. L. Klapp and Siegfried Hess

Defect trajectories and domain-wall loop dynamics during two-frequency switching in a bistable azimuthal nematic device *(9 pages)* 051712
A. J. Davidson, C. V. Brown, N. J. Mottram, S. Ladak, and C. R. Evans

Polymers

Crossover behavior in static and dynamic properties of a single DNA molecule from three to quasi-two dimensions *(7 pages)* 051801
Hitoshi Uemura, Masatoshi Ichikawa, and Yasuyuki Kimura

Mapping the variation of the translocation α scaling exponent with nanopore width *(5 pages)* 051802
Hendrick W. de Haan and Gary W. Slater

Biological physics

Stochastic dynamics of cholera epidemics *(6 pages)* 051901
Sandro Azaele, Amos Maritan, Enrico Bertuzzo, Ignacio Rodriguez-Iturbe, and Andrea Rinaldo

Persistence of cluster synchronization under the influence of advection *(16 pages)* 051902
Emma Guirey, Martin Bees, Adrian Martin, and Meric Srokosz

Hysteresis and bistability in periodically paced cardiac tissue *(9 pages)* 051903
Xiaodong Huang, Yu Qian, Xiaoming Zhang, and Gang Hu

Role of the particle's stepping cycle in an asymmetric exclusion process: A model of mRNA translation *(9 pages)* 051904
L. Ciandrini, I. Stansfield, and M. C. Romano

Analytical investigation of the effects of lateral connections on the accuracy of population coding *(15 pages)* 051905
Masafumi Oizumi, Keiji Miura, and Masato Okada

Residue length and solvation model dependency of elastinlike polypeptides *(8 pages)* 051906
Mustafa Bilsel and Handan Arkin

Protein folding on rugged energy landscapes: Conformational diffusion on fractal networks *(5 pages)* 051907
Gregg Lois, Jerzy Blawzdziewicz, and Corey S. O'Hern

Sheared active fluids: Thickening, thinning, and vanishing viscosity *(9 pages)* 051908
Luca Giomi, Tanniemola B. Liverpool, and M. Cristina Marchetti

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 81, NUMBER 5 MAY 2010

Ordering transition of non-Brownian suspensions in confined steady shear flow *(8 pages)* 051502
Kyongmin Yeo and Martin R. Maxey

Transport process of ions in insulating media in the hyperbolic diffusion regime *(8 pages)* 051503
G. Barbero and J. Ross Macdonald

Temperature development of glassy α-relaxation dynamics determined by broadband dielectric spectroscopy *(6 pages)* 051504
P. Lunkenheimer, S. Kastner, M. Köhler, and A. Loidl

Films, interfaces, and crystal growth

Multi-phase-field analysis of short-range forces between diffuse interfaces *(22 pages)* 051601
N. Wang, R. Spatschek, and A. Karma

Wetting reversal in colloid-polymer systems *(9 pages)* 051602
Edgar M. Blokhuis and Joris Kuipers

Thin-film growth by random deposition of linear polymers on a square lattice *(6 pages)* 051603
F. L. Forgerini and W. Figueiredo

Evolution of cellular structures during $Ge_{1-x}Si_x$ single-crystal growth by means of a modified phase-field method *(12 pages)* 051604
W. Miller, I. Rasin, and D. Stock

Model of oscillatory zoning in two dimensions: Simulation and mode analysis *(10 pages)* 051605
Tanja Mues, Andreas Heuer, Martin Burger, and Ihor Lubashevsky

Small droplets on superhydrophobic substrates *(14 pages)* 051606
Markus Gross, Fathollah Varnik, Dierk Raabe, and Ingo Steinbach

Self-templating growth of copper nanopearl-chain arrays in electrodeposition *(6 pages)* 051607
Yu-Yan Weng, Bo Zhang, Shao-Jie Fu, Mu Wang, Ru-Wen Peng, Guo-Bin Ma, Da-Jun Shu, and Nai-Ben Ming

Maximal curvature and crystal orientation on directionally solidified dendrites *(13 pages)* 051608
A. Pocheau, J. Deschamps, and M. Georgelin

Liquid crystals

Stability and distortions of liquid crystal order in a cell with a heterogeneous substrate *(25 pages)* 051701
Quan Zhang and Leo Radzihovsky

Director distortions and singularities in inhomogeneous fields *(11 pages)* 051702
Nándor Éber, Jana Heuer, Ralf Stannarius, Gergely Tátrai, and Ágnes Buka

Towing, breathing, splitting, and overtaking in driven colloidal liquid crystals *(5 pages)* 051703
A. Härtel, R. Blaak, and H. Löwen

Unwinding of the antiferroelectric helix in an electric field *(5 pages)* 051704
P. V. Dolganov and V. M. Zhilin

Orientational coupling enhancement in a carbon nanotube dispersed liquid crystal *(5 pages)* 051705
Rajratan Basu and Germano S. Iannacchione

Nematic biaxiality in a bent-core material *(7 pages)* 051706
Hyung Guen Yoon, Shin-Woong Kang, Ronald Y. Dong, Alberto Marini, Kattera A. Suresh, Mohan Srinivasarao, and Satyendra Kumar

(Continued)

PHYSICAL REVIEW E THIRD SERIES, VOLUME 81, NUMBER 5 MAY 2010

Quantum scattering in driven single- and double-barrier systems *(12 pages)* 051136
Martin Gärttner, Florian Lenz, Christoph Petri, Fotis K. Diakonos, and Peter Schmelcher

Truly random number generation based on measurement of phase noise of a laser *(4 pages)* 051137
Hong Guo, Wenzhuo Tang, Yu Liu, and Wei Wei

Nonmonotonic dynamics in a frustrated Ising model with time-dependent transverse field *(8 pages)* 051138
Shu Tanaka and Seiji Miyashita

Brownian motion with adhesion: Harmonic oscillator with fluctuating mass *(4 pages)* 051139
M. Gitterman and V. I Klyatskin

Duality and Fisher zeros in the two-dimensional Potts model on a square lattice *(8 pages)* 051140
Marco Astorino and Fabrizio Canfora

Equilibrium and linear transport properties of fluids

Single-file diffusion of macroscopic charged particles *(11 pages)* 051201
C. Coste, J.-B. Delfau, C. Even, and M. Saint Jean

Granular materials

Shear-driven size segregation of granular materials: Modeling and experiment *(8 pages)* 051301
Lindsay B. H. May, Laura A. Golick, Katherine C. Phillips, Michael Shearer, and Karen E. Daniels

Geometric aspects of particle segregation *(9 pages)* 051302
R. Caulkin, X. Jia, M. Fairweather, and R. A. Williams

Model of random packings of different size balls *(5 pages)* 051303
Maximilien Danisch, Yuliang Jin, and Hernan A. Makse

Stress-strain behavior and geometrical properties of packings of elongated particles *(17 pages)* 051304
Emilien Azéma and Farhang Radjaï

Colloidal dispersions, suspensions, and aggregates

Optical experiments on a crystallizing hard-sphere–polymer mixture at coexistence *(14 pages)* 051401
Andreas Stipp, Hans-Joachim Schöpe, Thomas Palberg, Thomas Eckert, Ralf Biehl, and Eckhard Bartsch

Viscosity of a concentrated suspension of rigid monosized particles *(11 pages)* 051402
H. J. H. Brouwers

Hydrodynamic coupling in polygonal arrays of colloids: Experimental and analytical results *(8 pages)* 051403
Giovanni M. Cicuta, Jurij Kotar, Aidan T. Brown, Ji-Ho Noh, and Pietro Cicuta

Brownian dynamics of emulsion film formation and droplet coalescence *(11 pages)* 051404
Jhoan Toro-Mendoza and Dimiter N. Petsev

Hydrodynamic attraction of immobile particles due to interfacial forces *(6 pages)* 051405
Julien Morthomas and Alois Würger

Structured and complex fluids

Plastic deformations in crystal, polycrystal, and glass in binary mixtures under shear: Collective yielding *(15 pages)* 051501
Hayato Shiba and Akira Onuki

(Continued)

PHYSICAL REVIEW E **THIRD SERIES, VOLUME 81, NUMBER 5** **MAY 2010**

Foundation of fractional Langevin equation: Harmonization of a many-body problem *(8 pages)* 051118
Ludvig Lizana, Tobias Ambjörnsson, Alessandro Taloni, Eli Barkai, and Michael A. Lomholt

Temperature-dependent structural behavior of self-avoiding walks on three-dimensional Sierpinski sponges *(5 pages)* 051119
Miriam Fritsche and Dieter W. Heermann

Particle condensation in pair exclusion process *(5 pages)* 051120
Sang-Woo Kim, Joongul Lee, and Jae Dong Noh

Formation of the internal structure of solids under severe load *(9 pages)* 051121
Leonid S. Metlov

Finite-size scaling behavior in trapped systems *(7 pages)* 051122
S. L. A. de Queiroz, R. R. dos Santos, and R. B. Stinchcombe

Stochastic resonance in a trapping overdamped monostable system *(8 pages)* 051123
N. V. Agudov, A. V. Krichigin, D. Valenti, and B. Spagnolo

Poisson-noise-induced escape from a metastable state *(7 pages)* 051124
M. I. Dykman

Separation of components from a scale mixture of Gaussian white noises *(4 pages)* 051125
Călin Vamoş and Maria Crăciun

Continuous time random walk with generic waiting time and external force *(6 pages)* 051126
Kwok Sau Fa and K. G. Wang

Environment-induced super selection without pointer states *(4 pages)* 051127
Christian Gogolin

Perturbation theory for ac-driven interfaces in random media *(19 pages)* 051128
Friedmar Schütze

Optimal refrigerator *(12 pages)* 051129
Armen E. Allahverdyan, Karen Hovhannisyan, and Guenter Mahler

Nonequilibrium thermodynamics: Structural relaxation, fictive temperature, and Tool-Narayanaswamy phenomenology in glasses *(13 pages)* 051130
P. D. Gujrati

Thermal equilibrium control by frequent bang-bang modulation *(11 pages)* 051131
Cheng-Xi Yang and Xiang-Bin Wang

Critical behavior of a three-dimensional random-bond Ising model using finite-time scaling with extensive Monte Carlo renormalization-group method *(10 pages)* 051132
Wanjie Xiong, Fan Zhong, Weilun Yuan, and Shuangli Fan

Physical origins of entropy production, free energy dissipation, and their mathematical representations *(5 pages)* 051133
Hao Ge and Hong Qian

Green function decoupling scheme for spin-spin correlations in Ising model: Example of partly ordered binary alloy *(5 pages)* 051134
M. S. Magdoń-Maksymowicz and A. Z. Maksymowicz

Thermalization and ergodicity in one-dimensional many-body open quantum systems *(5 pages)* 051135
Marko Žnidarič, Tomaž Prosen, Giuliano Benenti, Giulio Casati, and Davide Rossini
