THIRD SERIES, VOLUME 90, NUMBER 1  
PARTS A AND B

---

CONTENTS

JULY 2014

---

*The Table of Contents is a total listing of Parts A and B.  
Part A consists of pages 010101(R)–012603, and Part B pages 012701–019906(E).*

## PART A

### RAPID COMMUNICATIONS

#### Statistical Physics

- Consistent inference of a general model using the pseudolikelihood method (*3 pages*) ..... 010101(R)  
Alexander Mozeika, Onur Dikmen, and Joonas Piili
- Particle diagrams and embedded many-body random matrix theory (*4 pages*) ..... 010102(R)  
R. A. Small and S. Müller

#### Colloids and Complex Fluids

- Anomalous preasymptotic colloid transport by hydrodynamic dispersion in microfluidic capillary flow (*5 pages*) ..... 010301(R)  
Einar Orn Fridjonsson, Joseph D. Seymour, and Sarah L. Codd
- Effective attenuation length of an electron in liquid water between 10 and 600 eV (*5 pages*) ..... 010302(R)  
Yoshi-Ichi Suzuki, Kiyoshi Nishizawa, Naoya Kurahashi, and Toshinori Suzuki

#### Films, Interfaces, and Solids

- Order parameter for structural heterogeneity in disordered solids (*5 pages*) ..... 010401(R)  
Hua Tong and Ning Xu

#### Nonlinear Dynamics and Chaos

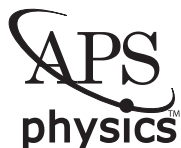

- Derivation of a neural field model from a network of theta neurons (*4 pages*) ..... 010901(R)  
Carlo R. Laing

#### Fluid Dynamics

- Front propagation in cellular flows for fast reaction and small diffusivity (*5 pages*) ..... 011001(R)  
Alexandra Tzella and Jacques Vanneste

#### Plasma Physics

- Dynamics of strongly correlated and strongly inhomogeneous plasmas (*5 pages*) ..... 011101(R)  
Hanno Kählert, Gabor J. Kalman, and Michael Bonitz

Selected for a Viewpoint in *Physics*. Please visit <http://physics.aps.org/>.

The editors and referees of PRE find these papers to be of particular interest, importance, or clarity. Please see our Announcement Phys. Rev. E 89, 010001 (2014).

# CONTENTS - *Continued*

PHYSICAL REVIEW E

THIRD SERIES, VOLUME 90, NUMBER 1

JULY 2014

- Reduced instability growth with high-adiabat high-foot implosions at the National Ignition Facility (*5 pages*) . . . . 011102(R)  
D. T. Casey, V. A. Smalyuk, K. S. Raman, J. L. Peterson, L. Berzak Hopkins, D. A. Callahan, D. S. Clark,  
E. L. Dewald, T. R. Dittrich, S. W. Haan, D. E. Hinkel, D. Hoover, O. A. Hurricane, J. J. Kroll,  
O. L. Landen, A. S. Moore, A. Nikroo, H.-S. Park, B. A. Remington, H. F. Robey, J. R. Rygg,  
J. D. Salmonson, R. Tommasini, and K. Widmann

## Classical Physics

- Generalized Klein-Gordon models: Behavior around the ground state condensate (*5 pages*) . . . . . 011201(R)  
Victor K. Kuetcher

## Computational Physics

-  Estimation of probability densities using scale-free field theories (*4 pages*) . . . . . 011301(R)  
Justin B. Kinney

## ARTICLES

### Statistical Physics

- Depinning of stiff directed lines in random media (*14 pages*) . . . . . 012101  
Horst-Holger Boltz and Jan Kierfeld
- Fisher exponent from pseudo- $\epsilon$  expansion (*5 pages*) . . . . . 012102  
A. I. Sokolov and M. A. Nikitina
- Anomalous diffusion induced by enhancement of memory (*6 pages*) . . . . . 012103  
Hyun-Joo Kim
- Nonsteady dynamic properties of a domain wall for the creep state under an alternating driving field (*8 pages*) . . . 012104  
N. J. Zhou and B. Zheng
- Topological phase transition in a discrete quasicrystal (*7 pages*) . . . . . 012105  
Eran Sagi and Eli Eisenberg
- Thermodynamic properties and entropy scaling law for diffusivity in soft spheres (*16 pages*) . . . . . 012106  
S. Pieprzyk, D. M. Heyes, and A. C. Brańka
-  Nonequilibrium ensemble inequivalence and large deviations of the density in the *ABC* model (*18 pages*) . . . . . 012107  
O. Cohen and D. Mukamel
- Generation of a tunable environment for electrical oscillator systems (*5 pages*) . . . . . 012108  
R. de J. León-Montiel, J. Svozilík, and Juan P. Torres
- Long-range correlations in a locally driven exclusion process (*7 pages*) . . . . . 012109  
Tridib Sadhu, Satya N. Majumdar, and David Mukamel
- Equilibrium states of generic quantum systems subject to periodic driving (*6 pages*) . . . . . 012110  
Achilleas Lazarides, Arnab Das, and Roderich Moessner
- Self-propelled particle in an external potential: Existence of an effective temperature (*7 pages*) . . . . . 012111  
Grzegorz Szamel

JULY 2014

|                                                                                                                                                                                                                                |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Small-cluster renormalization group in Ising and Blume-Emery-Griffiths models with ferromagnetic, antiferromagnetic, and quenched disordered magnetic interactions ( <i>13 pages</i> ) . . . . .                               | 012112 |
| F. Antenucci, A. Crisanti, and L. Leuzzi                                                                                                                                                                                       |        |
| Revisiting Feynman's ratchet with thermoelectric transport theory ( <i>7 pages</i> ) . . . . .                                                                                                                                 | 012113 |
| Y. Apertet, H. Ouerdane, C. Goupil, and Ph. Lecoeur                                                                                                                                                                            |        |
| Effect of coupling strength on a two-lane partially asymmetric coupled totally asymmetric simple exclusion process with Langmuir kinetics ( <i>11 pages</i> ) . . . . .                                                        | 012114 |
| Isha Dhiman and Arvind Kumar Gupta                                                                                                                                                                                             |        |
| Energy pumping in electrical circuits under avalanche noise ( <i>8 pages</i> ) . . . . .                                                                                                                                       | 012115 |
| Kiyoshi Kanazawa, Takahiro Sagawa, and Hisao Hayakawa                                                                                                                                                                          |        |
| Role of the interpretation of stochastic calculus in systems with cross-correlated Gaussian white noises ( <i>11 pages</i> ) . . . . .                                                                                         | 012116 |
| Vicenç Méndez, S. I. Denisov, Daniel Campos, and Werner Horsthemke                                                                                                                                                             |        |
| Scaling of clusters near discontinuous percolation transitions in hyperbolic networks ( <i>11 pages</i> ) . . . . .                                                                                                            | 012117 |
| Vijay Singh and Stefan Boettcher                                                                                                                                                                                               |        |
|  Scaling hypothesis for the Euclidean bipartite matching problem ( <i>9 pages</i> ) . . . . .                                                  | 012118 |
| S. Caracciolo, C. Lucibello, G. Parisi, and G. Sicuro                                                                                                                                                                          |        |
| Optimal efficiency of a noisy quantum heat engine ( <i>8 pages</i> ) . . . . .                                                                                                                                                 | 012119 |
| Dionisis Stefanatos                                                                                                                                                                                                            |        |
| Multiple phase transitions in extended hard-core lattice gas models in two dimensions ( <i>18 pages</i> ) . . . . .                                                                                                            | 012120 |
| Trisha Nath and R. Rajesh                                                                                                                                                                                                      |        |
| Quantum systems equilibrate rapidly for most observables ( <i>11 pages</i> ) . . . . .                                                                                                                                         | 012121 |
| Artur S. L. Malabarba, Luis Pedro García-Pintos, Noah Linden, Terence C. Farrelly, and Anthony J. Short                                                                                                                        |        |
| Mean-field universality class induced by weak hyperbolic curvatures ( <i>7 pages</i> ) . . . . .                                                                                                                               | 012122 |
| Andrej Gendiar, Michal Daniška, Roman Krčmár, and Tomotoshi Nishino                                                                                                                                                            |        |
| Fluctuations of isolated and confined surface steps of monatomic height ( <i>7 pages</i> ) . . . . .                                                                                                                           | 012123 |
| Walter Selke                                                                                                                                                                                                                   |        |
| Numerical test of hydrodynamic fluctuation theory in the Fermi-Pasta-Ulam chain ( <i>9 pages</i> ) . . . . .                                                                                                                   | 012124 |
| Suman G. Das, Abhishek Dhar, Keiji Saito, Christian B. Mendl, and Herbert Spohn                                                                                                                                                |        |
| Reinterpretation of velocity-dependent atomic friction: Influence of the inherent instrumental noise in friction force microscopes ( <i>8 pages</i> ) . . . . .                                                                | 012125 |
| Yalin Dong, Hongyu Gao, Ashlie Martini, and Philip Egberts                                                                                                                                                                     |        |
| Code-division multiple-access multiuser demodulator by using quantum fluctuations ( <i>16 pages</i> ) . . . . .                                                                                                                | 012126 |
| Yosuke Otsubo, Jun-ichi Inoue, Kenji Nagata, and Masato Okada                                                                                                                                                                  |        |
| Strong local passivity in finite quantum systems ( <i>7 pages</i> ) . . . . .                                                                                                                                                  | 012127 |
| Michael Frey, Ken Funo, and Masahiro Hotta                                                                                                                                                                                     |        |
|  Logarithmic finite-size effects on interfacial free energies: Phenomenological theory and Monte Carlo studies ( <i>19 pages</i> ) . . . . . | 012128 |
| Fabian Schmitz, Peter Virnau, and Kurt Binder                                                                                                                                                                                  |        |

THIRD SERIES, VOLUME 90, NUMBER 1

JULY 2014

|                                                                                                                                |        |
|--------------------------------------------------------------------------------------------------------------------------------|--------|
| How nonmagnetic particles intensify rotational diffusion in magnetorheological fluids ( <i>11 pages</i> ) . . . . .            | 012310 |
| L. Rodríguez-Arco, M. T. López-López, P. Kuzhir, and F. González-Caballero                                                     |        |
| Surface shear-transformation zones in amorphous solids ( <i>8 pages</i> ) . . . . .                                            | 012311 |
| Penghui Cao, Xi Lin, and Harold S. Park                                                                                        |        |
| Interplay of model ingredients affecting aggregate shape plasticity in diffusion-limited aggregation ( <i>10 pages</i> ) . . . | 012312 |
| P. Duarte-Neto, T. Stošić, B. Stošić, R. Lessa, and M. V. Milošević                                                            |        |

## Films, Interfaces, and Solids

|                                                                                                                                            |        |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Phase-field modeling of grain-boundary premelting using obstacle potentials ( <i>10 pages</i> ) . . . . .                                  | 012401 |
| V. Sai Pavan Kumar Bhogireddy, C. Hüter, J. Neugebauer, I. Steinbach, A. Karma, and R. Spatschek                                           |        |
| Thermally activated depinning motion of contact lines in pseudopartial wetting ( <i>8 pages</i> ) . . . . .                                | 012402 |
| Lingguo Du, Hugues Bodiguel, and Annie Colin                                                                                               |        |
| Self-similarity and scaling of thermal shock fractures ( <i>6 pages</i> ) . . . . .                                                        | 012403 |
| S. Tarasovs and A. Ghassemi                                                                                                                |        |
| Boundary lubrication with a liquid crystal monolayer ( <i>9 pages</i> ) . . . . .                                                          | 012404 |
| W. Chen, S. Kulju, A. S. Foster, M. J. Alava, and L. Laurson                                                                               |        |
| High-speed atomic force microscope imaging: Adaptive multiloop mode ( <i>10 pages</i> ) . . . . .                                          | 012405 |
| Juan Ren, Qingze Zou, Bo Li, and Zhiquan Lin                                                                                               |        |
| Contact angle hysteresis and pinning at periodic defects in statics ( <i>11 pages</i> ) . . . . .                                          | 012406 |
| Stanimir Iliev, Nina Pesheva, and Vadim S. Nikolayev                                                                                       |        |
| Sharp interfaces in two-dimensional free boundary problems: Interface calculation via matched conformal maps ( <i>15 pages</i> ) . . . . . | 012407 |
| Stuart Kent and Shankar C. Venkataramani                                                                                                   |        |
| Damage accumulation in quasibrittle fracture ( <i>5 pages</i> ) . . . . .                                                                  | 012408 |
| Claudio Manzato, Mikko J. Alava, and Stefano Zapperi                                                                                       |        |
| Dewetting of evaporating thin films over nanometer-scale topographies ( <i>8 pages</i> ) . . . . .                                         | 012409 |
| A. M. Akbarzadeh, A. Moosavi, and A. Moghimi Kheirabadi                                                                                    |        |

## Liquid Crystals

|                                                                                                                          |        |
|--------------------------------------------------------------------------------------------------------------------------|--------|
| Equilibrium configurations of nematic liquid crystals on a torus ( <i>8 pages</i> ) . . . . .                            | 012501 |
| Antonio Segatti, Michael Snarski, and Marco Veneroni                                                                     |        |
| Dynamics of colloidal particles in electrohydrodynamic convection of nematic liquid crystal ( <i>5 pages</i> ) . . . . . | 012502 |
| Kentaro Takahashi and Yasuyuki Kimura                                                                                    |        |
| Electric-field variations within a nematic-liquid-crystal layer ( <i>9 pages</i> ) . . . . .                             | 012503 |
| L. J. Cummings, E. Mema, C. Cai, and L. Kondic                                                                           |        |
| Gold nanoparticle liquid crystal composites as a tunable nonlinear medium ( <i>8 pages</i> ) . . . . .                   | 012504 |
| A. Acreman, M. Kaczmarek, and G. D'Alessandro                                                                            |        |

(Continued)

|                                                                                                                                                 |        |
|-------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Two-dimensional skyrmions and other solitonic structures in confinement-frustrated chiral nematics ( <i>12 pages</i> ) . . . . .                | 012505 |
| Paul J. Ackerman, Rahul P. Trivedi, Bohdan Senyuk, Jao van de Lagemaat, and Ivan I. Smalyukh                                                    |        |
| Rheology of twist-grain-boundary- <i>A</i> liquid crystals ( <i>5 pages</i> ) . . . . .                                                         | 012506 |
| Rasmita Sahoo, J. Ananthaiah, R. Dabrowski, and Surajit Dhara                                                                                   |        |
| Symmetry breaking of nematic umbilical defects through an amplitude equation ( <i>9 pages</i> ) . . . . .                                       | 012507 |
| Marcel G. Clerc, Estefania Vidal-Henriquez, Juan Diego Davila, and Michał Kowalczyk                                                             |        |
| Comparative studies on field-induced stretching behavior of single-walled and multiwalled carbon nanotube clusters ( <i>6 pages</i> ) . . . . . | 012508 |
| Weiwei Tie, Surjya Sarathi Bhattacharyya, Hye Ryung Park, Joong Hee Lee, Sang Won Lee, Tae Hoon Lee, Young Hee Lee, and Seung Hee Lee           |        |

### Polymers

|                                                                                                                               |        |
|-------------------------------------------------------------------------------------------------------------------------------|--------|
| Coarse-grained molecular dynamics simulations of the tensile behavior of a thermosetting polymer ( <i>8 pages</i> ) . . . . . | 012601 |
| Shaorui Yang and Jianmin Qu                                                                                                   |        |
| Healing of polymer interfaces: Interfacial dynamics, entanglements, and strength ( <i>15 pages</i> ) . . . . .                | 012602 |
| Ting Ge, Mark O. Robbins, Dvora Perahia, and Gary S. Grest                                                                    |        |
| Electrets in soft materials: Nonlinearity, size effects, and giant electromechanical coupling ( <i>7 pages</i> ) . . . . .    | 012603 |
| Qian Deng, Liping Liu, and Pradeep Sharma                                                                                     |        |

## PART B

### Biological Physics

|                                                                                                                                                          |        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Active matter transport and jamming on disordered landscapes ( <i>5 pages</i> ) . . . . .                                                                | 012701 |
| C. Reichhardt and C. J. Olson Reichhardt                                                                                                                 |        |
| Linear noise approximation for oscillations in a stochastic inhibitory network with delay ( <i>11 pages</i> ) . . . . .                                  | 012702 |
| Grégory Dumont, Georg Northoff, and André Longtin                                                                                                        |        |
| Reconstruction of network structures from repeating spike patterns in simulated bursting dynamics ( <i>9 pages</i> ) . . . . .                           | 012703 |
| Hao Song, Chun-Chung Chen, Jyh-Jang Sun, Pik-Yin Lai, and C. K. Chan                                                                                     |        |
| Swimming efficiency of spherical squirmers: Beyond the Lighthill theory ( <i>14 pages</i> ) . . . . .                                                    | 012704 |
| Kenta Ishimoto and Eamonn A. Gaffney                                                                                                                     |        |
| Numerical simulation of the pairwise interaction of deformable cells during migration in a microchannel ( <i>9 pages</i> ) . . . . .                     | 012705 |
| Hongzhi Lan and Damir B. Khismatullin                                                                                                                    |        |
| Control of cardiac alternans by mechanical and electrical feedback ( <i>13 pages</i> ) . . . . .                                                         | 012706 |
| Felicia Yapari, Dipen Deshpande, Youssef Belhamadia, and Stevan Dubljevic                                                                                |        |
| Determination of effective brain connectivity from functional connectivity with application to resting state connectivities ( <i>6 pages</i> ) . . . . . | 012707 |
| P. A. Robinson, S. Sarkar, Grishma Mehta Pandejee, and J. A. Henderson                                                                                   |        |

### Networks and Interdisciplinary Physics

|                                                                                                           |        |
|-----------------------------------------------------------------------------------------------------------|--------|
| Inferring the origin of an epidemic with a dynamic message-passing algorithm ( <i>9 pages</i> ) . . . . . | 012801 |
| Andrey Y. Lokhov, Marc Mézard, Hiroki Ohta, and Lenka Zdeborová                                           |        |

JULY 2014

|                                                                                                                                          |        |
|------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Voter model on the two-clique graph (7 pages) . . . . .                                                                                  | 012802 |
| Naoki Masuda                                                                                                                             |        |
| Simultaneous first- and second-order percolation transitions in interdependent networks (7 pages) . . . . .                              | 012803 |
| Dong Zhou, Amir Bashan, Reuven Cohen, Yehiel Berezin, Nadav Shnerb, and Shlomo Havlin                                                    |        |
| Geometrical invariability of transformation between a time series and a complex network (11 pages) . . . . .                             | 012804 |
| Yi Zhao, Tongfeng Weng, and Shengkui Ye                                                                                                  |        |
| Efficiently inferring community structure in bipartite networks (12 pages) . . . . .                                                     | 012805 |
| Daniel B. Larremore, Aaron Clauset, and Abigail Z. Jacobs                                                                                |        |
| Detecting network communities beyond assortativity-related attributes (10 pages) . . . . .                                               | 012806 |
| Xin Liu, Tsuyoshi Murata, and Ken Wakita                                                                                                 |        |
| Suppressing epidemics on networks by exploiting observer nodes (6 pages) . . . . .                                                       | 012807 |
| Taro Takaguchi, Takehisa Hasegawa, and Yuichi Yoshida                                                                                    |        |
| Competing spreading processes on multiplex networks: Awareness and epidemics (7 pages) . . . . .                                         | 012808 |
| Clara Granell, Sergio Gómez, and Alex Arenas                                                                                             |        |
| Robustness of a network formed of spatially embedded networks (7 pages) . . . . .                                                        | 012809 |
| Louis M. Shekhtman, Yehiel Berezin, Michael M. Danziger, and Shlomo Havlin                                                               |        |
| Epidemic outbreaks in two-scale community networks (11 pages) . . . . .                                                                  | 012810 |
| Stefano Bonaccorsi, Stefania Ottaviano, Francesco De Pellegrini, Annalisa Socievoli, and Piet Van Mieghem                                |        |
| General optimization technique for high-quality community detection in complex networks (8 pages) . . . . .                              | 012811 |
| Stanislav Sobolevsky, Riccardo Campari, Alexander Belyi, and Carlo Ratti                                                                 |        |
| Interplay of network dynamics and heterogeneity of ties on spreading dynamics (9 pages) . . . . .                                        | 012812 |
| Luca Ferreri, Paolo Bajardi, Mario Giacobini, Silvia Perazzo, and Ezio Venturino                                                         |        |
| Effect of environment fluctuations on pattern formation of single species (8 pages) . . . . .                                            | 012813 |
| L. A. da Silva, E. H. Colombo, and C. Anteneodo                                                                                          |        |
| Parallel discrete-event simulation schemes with heterogeneous processing elements (7 pages) . . . . .                                    | 012814 |
| Yup Kim, Ikhyun Kwon, Huiseung Chae, and Soon-Hyung Yook                                                                                 |        |
| Percolation on fitness-dependent networks with heterogeneous resilience (10 pages) . . . . .                                             | 012815 |
| K. Hoppe and G. J. Rodgers                                                                                                               |        |
| Networks maximizing the consensus time of voter models (13 pages) . . . . .                                                              | 012816 |
| Yuni Iwamasa and Naoki Masuda                                                                                                            |        |
| Hidden scaling patterns and universality in written communication (7 pages) . . . . .                                                    | 012817 |
| M. Formentin, A. Lovison, A. Maritan, and G. Zanzotto                                                                                    |        |
| Transmission of linear regression patterns between time series: From relationship in time series to complex networks (7 pages) . . . . . | 012818 |
| Xiangyun Gao, Haizhong An, Wei Fang, Xuan Huang, Huajiao Li, Weiqiong Zhong, and Yinghui Ding                                            |        |

**Nonlinear Dynamics and Chaos**

|                                                                                                                 |        |
|-----------------------------------------------------------------------------------------------------------------|--------|
| Modular networks with delayed coupling: Synchronization and frequency control ( <i>9 pages</i> ) . . . . .      | 012901 |
| Oleg V. Maslennikov and Vladimir I. Nekorkin                                                                    |        |
| Solutions of the higher-order Manakov-type continuous and discrete equations ( <i>8 pages</i> ) . . . . .       | 012902 |
| A. Chowdury, A. Ankiewicz, and N. Akhmediev                                                                     |        |
| Dynamics in the Sakaguchi-Kuramoto model with two subpopulations ( <i>4 pages</i> ) . . . . .                   | 012903 |
| Ping Ju, Qionglin Dai, Hongyan Cheng, and Junzhong Yang                                                         |        |
| Size-dependent diffusion promotes the emergence of spatiotemporal patterns ( <i>7 pages</i> ) . . . . .         | 012904 |
| Lai Zhang, Uffe Høgsbro Thygesen, and Malay Banerjee                                                            |        |
| Front propagation in a chaotic flow field ( <i>7 pages</i> ) . . . . .                                          | 012905 |
| C. O. Mehrvarzi and M. R. Paul                                                                                  |        |
| Dynamics of impurities in a three-dimensional volume-preserving map ( <i>13 pages</i> ) . . . . .               | 012906 |
| Swetamber Das and Neelima Gupte                                                                                 |        |
| Shallow-water soliton dynamics beyond the Korteweg–de Vries equation ( <i>8 pages</i> ) . . . . .               | 012907 |
| Anna Karczewska, Piotr Rozmej, and Eryk Infeld                                                                  |        |
| Symbolic dynamics-based error analysis on chaos synchronization via noisy channels ( <i>7 pages</i> ) . . . . . | 012908 |
| Da Lin, Fuchen Zhang, and Jia-Ming Liu                                                                          |        |
| Control for a synchronization-desynchronization switch ( <i>11 pages</i> ) . . . . .                            | 012909 |
| Zhiwei He, Xingang Wang, Guo-Yong Zhang, and Meng Zhan                                                          |        |

**Fluid Dynamics**

|                                                                                                                                                  |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Electrokinetic instability near charge-selective hydrophobic surfaces ( <i>8 pages</i> ) . . . . .                                               | 013001 |
| V. S. Shelistov, E. A. Demekhin, and G. S. Ganchenko                                                                                             |        |
| Chaotic motion of light particles in an unsteady three-dimensional vortex: Experiments and simulation ( <i>12 pages</i> ) . . . . .              | 013002 |
| József Vanyó, Miklós Vincze, Imre M. Jánosi, and Tamás Tél                                                                                       |        |
| Interfacial dynamics of two immiscible fluids in spatially periodic porous media: The role of substrate wettability ( <i>9 pages</i> ) . . . . . | 013003 |
| Pranab Kumar Mondal, Debabrata DasGupta, and Suman Chakraborty                                                                                   |        |
| Magnetic energy dissipation and mean magnetic field generation in planar convection-driven dynamos ( <i>5 pages</i> ) . . . . .                  | 013004 |
| A. Tilgner                                                                                                                                       |        |
| Nonaxisymmetric high-aspect-ratio ellipsoids under shear: Lowest-order correction for finite aspect ratios ( <i>6 pages</i> ) . . . . .          | 013005 |
| Feng Shi and Peter J. Mucha                                                                                                                      |        |
| Finite time blow-up and breaking of solitary wind waves ( <i>4 pages</i> ) . . . . .                                                             | 013006 |
| M. A. Manna, P. Montalvo, and R. A. Kraenkel                                                                                                     |        |
| dc step response of induced-charge electro-osmosis between parallel electrodes at large voltages ( <i>29 pages</i> ) . . . . .                   | 013007 |
| Hideyuki Sugioka                                                                                                                                 |        |

Hyde                                                                                                                                                                                                                                                                                                                                                                                                                               |                                   |           |

(Continued)

**Classical Physics**

- Role of viscous friction in the reverse rotation of a disk (*5 pages*) ..... 013201  
 Pablo de Castro and Fernando Parisio
- Self-similar propagation and asymptotic optical waves in nonlinear waveguides (*9 pages*) ..... 013202  
 Jun-Rong He, Lin Yi, and Hua-Mei Li

**Computational Physics**

- Improved transfer matrix methods for calculating quantum transmission coefficient (*7 pages*) ..... 013301  
 Debabrata Biswas and Vishal Kumar
- Theory of ion transport with fast acid-base equilibrations in bioelectrochemical systems (*10 pages*) ..... 013302  
 J. E. Dykstra, P. M. Biesheuvel, H. Bruning, and A. Ter Heijne
- Boundary condition at a two-phase interface in the lattice Boltzmann method for the convection-diffusion equation (*10 pages*) ..... 013303  
 Hiroaki Yoshida, Takayuki Kobayashi, Hidemitsu Hayashi, Tomoyuki Kinjo, Hitoshi Washizu, and Kenji Fukuzawa
- Multiscale dynamics of semiflexible polymers from a universal coarse-graining procedure (*5 pages*) ..... 013304  
 Elena F. Koslover and Andrew J. Spakowitz
- Nonequilibrium scheme for computing the flux of the convection-diffusion equation in the framework of the lattice Boltzmann method (*15 pages*) ..... 013305  
 Zhenhua Chai and T. S. Zhao
- Real-space finite-difference calculation method of generalized Bloch wave functions and complex band structures with reduced computational cost (*13 pages*) ..... 013306  
 Shigeru Tsukamoto, Kikuji Hirose, and Stefan Blügel
- Self-energy-modified Poisson-Nernst-Planck equations: WKB approximation and finite-difference approaches (*10 pages*) ..... 013307  
 Zhenli Xu, Manman Ma, and Pei Liu
- Path-integral Monte Carlo method for Rényi entanglement entropies (*16 pages*) ..... 013308  
 C. M. Herdman, Stephen Inglis, P.-N. Roy, R. G. Melko, and A. Del Maestro
- Generalized modification in the lattice Bhatnagar-Gross-Krook model for incompressible Navier-Stokes equations and convection-diffusion equations (*18 pages*) ..... 013309  
 Xuguang Yang, Baochang Shi, and Zhenhua Chai
- Acoustic equations of state for simple lattice Boltzmann velocity sets (*8 pages*) ..... 013310  
 Erlend Magnus Vigen

**ERRATA**

- Publisher's Note: Dynamo efficiency controlled by hydrodynamic bistability [Phys. Rev. E **89**, 063023 (2014)] (*1 page*) ..... 019901(E)  
 Sophie Miralles, Johann Herault, Stephan Fauve, Christophe Gissinger, François Pétrélis, François Daviaud, Bérengère Dubrulle, Jean Boisson, Mickaël Bourgoin, Gautier Verhille, Philippe Odier, Jean-François Pinton, and Nicolas Plihon
