

**Erratum: Inertia-gravity wave dissipation and form drag.
I. Finite depth effects [Phys. Rev. Fluids **11**, 054804 (2026)]**

Daniel Abdulah  and Wanying Kang 

(Received 8 July 2026; published 29 July 2026)

DOI: [10.1103/z6yf-dznx](https://doi.org/10.1103/z6yf-dznx)

At the time of publication, the authors were not aware that Eq. (51) is equivalent to Eq. (28) in Ref. [1] (cited as Ref. [38] in the original article), where the result was derived previously. The authors acknowledge that the inertia-gravity wave conversion rate for horizontal flow over topography in a two-dimensional finite-depth domain with nonhydrostatic and nonacoustic effects was first presented in Ref. [38]. This correction does not change the validity of the results or conclusions of the paper.
