

Ratio between the global spin relaxation rate minimum and the rate at vanishing wave vectors of spin density in zinc-blende-type 2DEGs as a function of Miller indices. White regions indicate persistent spin helix solutions. [Michael Kammermeier, Paul Wenk, and John Schliemann, *Phys. Rev. Lett.* **117**, 236801 (2016)]

Physics
spotlighting exceptional research

The American Physical Society’s free online publication, *Physics* (<http://physics.aps.org/>), provides thought-provoking analysis and spotlights exceptional research.
