

Isocontours of the neutrino vacuum appearance probability as a function of the three-neutrino CP phase δ_{CP} (abscissa) and a new “seesaw” phase φ deriving from nonunitarity (ordinate). Black lines correspond to the standard value $\varphi_{CP} = 3\pi/2$; blue (red) domain corresponds to a 10% (20%) deviation. Range is from zero to 2π for both axes. [O. G. Miranda, M. Tórtola, and J. W. F. Valle, Phys. Rev. Lett. **117**, 061804 (2016)]
