

(Top) Side view, and (bottom) aerial view of a layer of particles trapped at an oil-water interface as it grows and then sinks in a container of water. (Top) The time lapse between the first and last images is roughly 400 ms. The two sets of images are not of the same event. [Suzie Protière *et al*., Phys. Rev. Lett. **118**, 108001 (2017)].
