

Randomly packed assemblies of granular chains indented by a cylindrical probe in a flexible container (left). Photographs of final states of granular chains after removal of the container (right; number of beads per chain increases from middle top to bottom right in a И direction). Selected for a Focus story in *Physics* and an Editors' Suggestion. [D. Dumont *et al.*, Phys. Rev. Lett. **120**, 088001(2018)]
