

Hourly skymaps of relative TeV-scale cosmic-ray intensity centered at the zenith, recorded by the Large High Altitude Air Shower Observatory on November 4, 2021. Black arrows indicate the direction and magnitude of large-scale anisotropy near the arrival of an interplanetary coronal mass ejection. Selected for a Focus story in *Physics Magazine* and for an Editors' Suggestion. [Z. Cao *et al.*, (LHAASO Collaboration), Phys. Rev. Lett. **136**, 251002 (2026)]
