

## Current Rapid Communications

*Rapid Communications in Physical Review are short reports of important new work which are of sufficient interest to be given priority handling in the publication process. The following papers have been accepted for publication as Rapid Communications and appear as indicated in the designated Physical Review issues.*

### Physical Review B, Vol. 56, 1 December 1997, Issue 22

|                                                                                                                                                                                                                           |                                                                                                                       |        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|--------|
| Picosecond ir hole-burning spectroscopy on HDO ice <i>Ih</i> .....                                                                                                                                                        | G. Seifert, K. Weidlich, and H. Graener                                                                               | R14231 |
| Persistent spectral hole burning of sol-gel-derived $\text{Eu}^{3+}$ -doped $\text{SiO}_2$ glass .....                                                                                                                    | Masayuki Nogami and Tomokatsu Hayakawa                                                                                | R14235 |
| Antiferromagnetic heavy-fermion and Kondo-insulating states with compensated magnetic moments .....                                                                                                                       | Roman Doradziński and Jozef Spałek                                                                                    | R14239 |
| Spin and orbital excitation spectrum in the Kugel-Khomskii model .....                                                                                                                                                    | G. Khaliullin and V. Oudovenko                                                                                        | R14243 |
| One-dimensional $t$ - $J$ model with next-nearest-neighbor hopping: Breakdown of the Luttinger liquid .....                                                                                                               | R. Eder and Y. Ohta                                                                                                   | R14247 |
| Universality class of integer quantum spin chains: $S = 2$ case study .....                                                                                                                                               | Shaojin Qin, Xiaoqun Wang, and Lu Yu                                                                                  | R14251 |
| Pressure-induced ferro- to antiferromagnetic transition in a purely organic compound, $\beta$ -phase $\square$ -nitrophenyl nitronyl nitroxide .....                                                                      | Masaki Mito, Tatsuya Kawae, Masaharu Takumi, Kiyofumi Nagata, Masafumi Tamura, Minoru Kinoshita, and Kazuyoshi Takeda | R14255 |
| Relativistic spin-polarized theory of magnetoelastic coupling and magnetic anisotropy strain dependence: Application to Co/Cu(001) .....                                                                                  | A.B. Shick, D.L. Novikov, and A.J. Freeman                                                                            | R14259 |
| Optical exploration of the magnetic field versus temperature phase diagram of $\text{CuGeO}_3$ .....                                                                                                                      | V.C. Long, J.L. Musfeldt, T. Schmiedel, A. Revcolevschi, and G. Dhaleene                                              | R14263 |
| Magnetic resonance effect in x-ray resonant Raman scattering .....                                                                                                                                                        | T. Iwazumi, K. Kobayashi, S. Kishimoto, T. Nakamura, S. Nanao, D. Ohsawa, R. Katano, and Y. Isozumi                   | R14267 |
| Quantum evaporation from superfluid $^4\text{He}$ : Normal incidence .....                                                                                                                                                | M.B. Sobnack and J.C. Inkson                                                                                          | R14271 |
| Far-infrared reflectivity along the $c$ axis in $\text{La}_2\text{CuO}_{4+\delta}$ , $\text{La}_{1.89}\text{Ca}_{1.11}\text{Cu}_2\text{O}_{6+\delta}$ , and $\text{Nd}_2\text{CuO}_{4-x}\text{F}_x$ single crystals ..... | H. Shibata and T. Yamada                                                                                              | R14275 |
| Breakdown of Migdal's theorem and intensity of electron-phonon coupling in high- $T_c$ superconductors .....                                                                                                              | G.A. Ummarino and R.S. Gonnelli                                                                                       | R14279 |
| Possibility of periodically reentrant superconductivity in ferromagnet/superconductor layered structures .....                                                                                                            | M.G. Khusainov and Yu.N. Proshin                                                                                      | R14283 |
| Enhancement of the $d_{x^2-y^2}$ pairing correlation in the two-dimensional Hubbard model: A quantum Monte Carlo study .....                                                                                              | Kazuhiko Kuroki and Hideo Aoki                                                                                        | R14287 |
| Current-induced vortex motion and the vortex-glass transition in $\text{YBa}_2\text{Cu}_3\text{O}_y$ films .....                                                                                                          | T. Nojima, A. Kakinuma, and Y. Kuwasawa                                                                               | R14291 |
| Disorder-driven intermediate state in the lattice melting transition of $\text{Bi}_2\text{Sr}_2\text{CaCu}_2\text{O}_{8+\delta}$ single crystals .....                                                                    | A. Oral, J.C. Barnard, S.J. Bending, S. Ooi, H. Taoka, T. Tamegai, and M. Henini                                      | R14295 |
| Origin of the variation of $T_c$ with superconducting layer thickness and separation in $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}/\text{PrBa}_2\text{Cu}_3\text{O}_7$ superlattices .....                                    | R.G. Goodrich, P.W. Adams, D.H. Lowndes, and D.P. Norton                                                              | R14299 |

### Physical Review E, Vol. 56, December 1997, Issue 6

|                                                                                                                          |                                                         |       |
|--------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|-------|
| Self-organized criticality with complex scaling exponents in the train model .....                                       | Franz-Josef Elmer                                       | R6225 |
| Modulational estimate for the maximal Lyapunov exponent in Fermi-Pasta-Ulam chains .....                                 | Thierry Dauxois, Stefano Ruffo, and Alessandro Torcini  | R6229 |
| Relaxation process in a regime of quantum chaos .....                                                                    | Giulio Casati, Giulio Maspero, and Dima L. Shepelyansky | R6233 |
| Quantum relaxation in open chaotic systems .....                                                                         | Klaus M. Frahm                                          | R6237 |
| Epidemic analysis of the second-order transition in the Ziff-Gulari-Barshad surface-reaction model .....                 | Christopher A. Voigt and Robert M. Ziff                 | R6241 |
| Two-component radiation model of the sonoluminescing bubble .....                                                        | David Tsiklauri                                         | R6245 |
| Velocity interferometry technique used to measure the expansion and compression phases of a sonoluminescent bubble ..... | Gerardo A. Delgadino and Fabian J. Bonetto              | R6248 |
| Criticality of dipolar fluids: Liquid-vapor condensation versus phase separation in systems of living polymers .....     | J.M. Tavares, M.M. Telo da Gama, and M.A. Osipov        | R6252 |

## Current Rapid Communications-Continued

|                                                                                                                                                     |                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| Soft-mode turbulence in electrohydrodynamic convection of a homeotropically aligned nematic layer .....                                             |                                                              |
| ..... Yoshiki Hidaka, Jong-Hoon Huh, Ken-ichi Hayashi, Shoichi Kai, and Michael I. Tribelsky                                                        | R6256                                                        |
| First-order nematic-smectic phase transition for hard spherocylinders in the limit of infinite aspect ratio .....                                   |                                                              |
| ..... James M. Polson and Daan Frenkel                                                                                                              | R6260                                                        |
| Intermolecular transitions observed by electric-quadrupole-resonant second-harmonic generation in a discotic liquid crystal of phthalocyanine ..... |                                                              |
| ..... Masao Sato, Akira Takeuchi, Toshiki Yamada, Hajime Hoshi, Ken Ishikawa, Takehiko Mori, and Hideo Takezoe                                      | R6264                                                        |
| Oscillatory instabilities in rapid directional solidification .....                                                                                 | M. Conti R6267                                               |
| Maximum angle of stability in wet and dry spherical granular media .....                                                                            |                                                              |
| ..... Réka Albert, István Albert, Daniel Hornbaker, Albert-László Barabási, and Peter Schiffer                                                      | R6271                                                        |
| Dynamics of inelastically colliding rough spheres: Relaxation of translational and rotational energy .....                                          |                                                              |
| ..... Martin Huthmann and Annette Zippelius                                                                                                         | R6275                                                        |
| Electrofreezing of water in molecular dynamics simulation accelerated by oscillatory shear .....                                                    |                                                              |
| ..... István Borzsák and Peter T. Cummings                                                                                                          | R6279                                                        |
| Pathway to surface-induced phase transition of a confined fluid .....                                                                               | Ka Lum and Alenka Luzar R6283                                |
| Critical scaling and Type III intermittent chaos in isolated rabbit resistance arteries .....                                                       |                                                              |
| ..... T.M. Griffith, D. Parthimos, J. Crombie, and D.H. Edwards                                                                                     | R6287                                                        |
| Absolute photonic band gap in a two-dimensional square lattice of square dielectric rods in air .....                                               |                                                              |
| ..... Chul-Sik Kee, Jae-Eun Kim, and Hae Yong Park                                                                                                  | R6291                                                        |
| Walking solitons in type II second-harmonic generation .....                                                                                        | D. Mihalache, D. Mazilu, L.-C. Crasovan, and L. Torner R6294 |
