Current Rapid Communications

Rapid Communications in Physical Review are short reports of important new work which are of sufficient interest to be given priority handling in the publication process. The following papers have been accepted for publication as Rapid Communications and appear as indicated in the designated Physical Review issues.

Physical Review A, Vol. 57, March 1998, Issue 3

From Feynman histories to observables ..... D. Sokolovski R1469
Microscopic analogs of the Greenberger-Horne-Zeilinger experiment ..... Seth Lloyd R1473
Optical simulation of quantum logic ..... N. J. Cerf, C. Adami, and P. G. Kwiat R1477
Finite-size scaling approach for the Schrödinger equation ..... Pablo Serra, Juan Pablo Neirotti, and Sabre Kais R1481
Angle-resolved two-dimensional mapping of electron emission following Cl $2p$ excitations in the HCl molecule .....
E. Kukk, A. Wills, N. Berrah, B. Langer, J. D. Bozek, O. Nayadin, M. Alsherhi, A. Farhat, and D. Cubaynes R1485
Double photoionization of helium from threshold to high energies .....
..... Yanghui Qiu, Jian-Zhi Tang, Joachim Burgdörfer, and Jianyi Wang R1489
Threshold photodetachment of Al^-: Electron affinity and fine structure .....
..... Michael Scheer, René C. Bilodeau, Jan Thøgersen, and Harold K. Haugen R1493
Elastic and inelastic collisions of ^{6}Li atoms in magnetic and optical traps .....
..... M. Houbiers, H. T. C. Stoof, W. I. McAlexander, and R. G. Hulet R1497
Direct observation of atomic localization in optical superlattices ..... L. Guidoni and P. Verkerk R1501
Multiply connected Bose-Einstein-condensed alkali-metal gases: Current-carrying states and their decay .....
..... Erich J. Mueller, Paul M. Goldbart, and Yuli Lyanda-Geller R1505
