

Current Rapid Communications

Rapid Communications in Physical Review are short reports of important new work which are of sufficient interest to be given priority handling in the publication process. The following papers have been accepted for publication as Rapid Communications and appear as indicated in the designated Physical Review issues.

Physical Review A, Vol. 57, February 1998, Issue 2

Uncoupling correlated calculations in atomic physics: Very high accuracy and ease	S.P. Goldman	R677
Microscopic lens effect in photoelectron imaging spectroscopy	C. Bordas and J.C. Pinaré	R681
Relativistic effects on the H^- resonances converging to the $H(n = 2)$ threshold	E. Lindroth, A. Bùrgers, and N. Brandefelt	R685
Estimated valence-level Lamb shifts for group I and group II metal atoms	Pekka Pyykkö, Maria Tokman, and L.N. Labzowsky	R689
Mechanisms of double ionization of atoms by electron impact	C. Dal Cappello, R. El Mkhater, and P.A. Hervieux	R693
Dissociative electron attachment to NO and NO clusters	Yannan Chu, Gilbert Senn, Paul Scheier, Alexander Stamatovic, Tilmann D. Märk, Frank Brùning, Stefan Matejcik, and Eugen Illenberger	R697
Intensity-resolved multiphoton ionization: Circumventing spatial averaging	M.A. Walker, P. Hansch, and L.D. Van Woerkom	R701
Enhanced laser cooling and state preparation in an optical lattice with a magnetic field	D.L. Haycock, S.E. Hamann, G. Klose, G. Raithel, and P.S. Jessen	R705
Eight- and nine-photon resonances in multiphoton ionization of xenon	P. Hansch, M.A. Walker, and L.D. Van Woerkom	R709
Measuring the quantum state of cold atoms using momentum shearing interferometry	Ian A. Walmsley and Nicholas P. Bigelow	R713
