

Current Rapid Communications

Rapid Communications in Physical Review are short reports of important new work which are of sufficient interest to be given priority handling in the publication process. The following papers have been accepted for publication as Rapid Communications and appear as indicated in the designated Physical Review issues.

Physical Review A, Vol. 58, November 1998, Issue 5

Approach towards a complete photoionization experiment with polarized atoms using magnetic dichroism and phase tilt measurements	
..... K. Godehusen, P. Zimmermann, A. Verwey, A. von dem Borne, Ph. Wernet, and B. Sonntag	R3371
Photodissociation in quantum chaotic systems: Random-matrix theory of cross-section fluctuations	
..... Yan V. Fyodorov and Y. Alhassid	R3375
Observation of an impact-parameter window in low-velocity ionizing collisions of Ne^+ on Ne proceeding through quasimolecular states	
..... M.A. Abdallah, W. Wolff, H.E. Wolf, C.L. Cocke, and M. Stöckli	R3379
Mesoscopic motion of atomic ions in magnetic fields	
..... David M. Leitner and P. Schmelcher	R3383
Magnetic grating echoes from laser-cooled atoms	
..... A. Kumarakrishnan, S.B. Cahn, U. Shim, and T. Sleator	R3387
Dielectric formalism and damping of collective modes in trapped Bose-Einstein condensed gases	
..... Gyula Bene and Péter Szépfalussy	R3391
Trapped one-dimensional Bose gas as a Luttinger liquid	
..... H. Monien, M. Linn, and N. Elstner	R3395
Impact of spontaneous spatial symmetry breaking on the critical atom number for two-component Bose-Einstein condensates	
..... B.D. Esry	R3399
Induced optical spatial solitons	
..... D. Bortman-Arbiv, A.D. Wilson-Gordon, and H. Friedmann	R3403
