# Current Rapid Communications

*Rapid Communications in Physical Review are short reports of important new work which are of sufficient interest to be given priority handling in the publication process. The following papers have been accepted for publication as Rapid Communications and appear as indicated in the designated Physical Review issues.*

**Physical Review E, Vol. 59, January 1999, Issue 1**

Heat conduction in the diatomic Toda lattice revisited ..... Takahiro Hatano R1
Definition of temperature in equilibrium and nonequilibrium systems ..... Gary P. Morriss and Lamberto Rondoni R5
Influence of a periodic field on two-level classical systems ..... V. Berdichevsky and M. Gitterman R9
Universality in sandpiles ..... Alessandro Chessa, H. Eugene Stanley, Alessandro Vespignani, and Stefano Zapperi R12
Two-dimensional self-avoiding walks on a cylinder ..... Helge Frauenkron, Maria Serena Causo, and Peter Grassberger R16
Statistics of persistent events: An exactly soluble model .... A. Baldassarri, J. P. Bouchaud, I. Dornic, and C. Godrèche R20
Quasipatterns in second-harmonic generation ..... Stefano Longhi R24
Globally coupled multiattractor maps: Mean field dynamics controlled by the number of elements ..... Imre M. Jánosi and Jason A. C. Gallas R28
Control of transients in "lethargic" systems ..... G. L. Lippi, P. A. Porta, L. M. Hoffer, and H. Grassi R32
Steady magnetic field generation due to transient field ionization in ultrashort laser-solid interaction ..... Andrea Macchi, Enrique Conejero Jarque, Dieter Bauer, Fulvio Cornolti, and Luis Plaja R36
Nontrivial linear effects of dispersion at the interaction point ..... Stefania Petracca and Kohji Hirata R40
Molecular dynamics simulation with reversible heat addition ..... Nicolas G. Hadjiconstantinou R44
