In Eq. (13), the final term which is linear in \(x\) is missing a factor of \(d\). The final version of the corrected equation is

\[
\beta a_{vib} = d \ln\left(\frac{T_S}{T}\right) - dx\left(C\beta - \ln(\pi C\beta)/2\right).
\]

This changes two of our fit parameters to \(\xi = 0.22\) and \(C = 3.1\), but does not alter the results presented in Fig. 1 nor the associated conclusions.
