

# FORTHCOMING ARTICLES

The following is a list of articles scheduled for forthcoming issues of *Reviews of Modern Physics*

---

|                                                                                                                                                 |                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Nobel Lecture: The BEH mechanism and its scalar boson</b>                                                                                    | François Englert                                                                                                                                              |
| <b>Nobel Lecture: Evading the Goldstone theorem</b>                                                                                             | Peter W. Higgs                                                                                                                                                |
| <b>Spin-dependent phenomena and device concepts explored in (Ga,Mn)As</b>                                                                       | T. Jungwirth<br>J. Wunderlich<br>V. Novák<br>K. Olejník<br>B. L. Gallagher<br>R. P. Campion<br>K. W. Edmonds<br>A. W. Rushforth<br>A. J. Ferguson<br>P. Němec |
| <b>Beam by design: Laser manipulation of electrons in modern accelerators</b>                                                                   | Erik Hemsing<br>Gennady Stupakov<br>Dao Xiang<br>Alexander Zholents                                                                                           |
| <b><i>Colloquium</i>: Biophysical principles of undulatory self-propulsion in granular media</b>                                                | Daniel I. Goldman                                                                                                                                             |
| <b><i>Colloquium</i>: Graphene spectroscopy</b>                                                                                                 | D. N. Basov<br>M. M. Fogler<br>A. Lanzara<br>Feng Wang<br>Yuanbo Zhang                                                                                        |
| <b>The hadronic final state at HERA</b>                                                                                                         | Paul R. Newman<br>Matthew Wing                                                                                                                                |
| <b>Modeling semiflexible polymer networks</b>                                                                                                   | C. P. Broedersz<br>F. C. MacKintosh                                                                                                                           |
| <b>Erratum: Nonequilibrium fluctuations, fluctuation theorems, and counting statistics in quantum systems [Rev. Mod. Phys. 81, 1665 (2009)]</b> | Massimiliano Esposito<br>Upendra Harbola<br>Shaul Mukamel                                                                                                     |
