

- 030001 Editorial: To Review Is to Be
Randall D. Kamien
- 030501 Nobel Lecture: Multiple equilibria
Giorgio Parisi
- 031001 *Colloquium*: Quantum and classical discrete time crystals
Michael P. Zaletel, Mikhail Lukin, Christopher Monroe,
Chetan Nayak, Frank Wilczek, and Norman Y. Yao
- 031002 *Colloquium*: Unconventional fully gapped superconductivity in the
heavy-fermion metal CeCu_2Si_2
Michael Smidman, Oliver Stockert, Emilian M. Nica, Yang Liu,
Huiqiu Yuan, Qimiao Si, and Frank Steglich
- 031003 *Colloquium*: Anomalous statistics of laser-cooled atoms in dissipative optical lattices
Gadi Afek, Nir Davidson, David A. Kessler, and Eli Barkai
- 035001 Computational advantage of quantum random sampling
Dominik Hangleiter and Jens Eisert
- 035002 Long-range interacting quantum systems
Nicolò Defenu, Tobias Donner, Tommaso Macrì, Guido Pagano,
Stefano Ruffo, and Andrea Trombettoni
- 035003 Weak gravity conjecture
Daniel Harlow, Ben Heidenreich,
Matthew Reece, and Tom Rudelius
- 035004 Quantitative theory of magnetic interactions in solids
Attila Szilva, Yaroslav Kvashnin, Evgeny A. Stepanov,
Lars Nordström, Olle Eriksson,
Alexander I. Lichtenstein, and Mikhail I. Katsnelson
- 035005 The physics of fast radio bursts
Bing Zhang
- 035006 Atom counting with accelerator mass spectroscopy
Walter Kutschera, A. J. Timothy Jull,
Michael Paul, and Anton Wallner

The exchange interaction between two
atomic magnetic moments in a solid.
[Attila Szilva *et al.*, Rev. Mod. Phys. **95**,
035004 (2023)]
